HAM RADIO IN SPACE: AO-40 UPDATE

A scheduled attitude shift that is necessary to compensate for unfavorable sun angles, will leave the Oscar 40 satellite's antennas pointing away from earth until next spring. The adjustments will lead to a transponder shut-down period that could start as soon as late December. The satellite is currently in a long period during which earth eclipses the sun near perigee - its point closest to earth. Like most satellites, Oscar 40 relies on solar panels for its power. (AMSAT-NA)

**

DX

In D-X, Eddie Seymour, WB4MLE reports a really neat opening on 6 to Europe the morning of December 5th. From 1400 to 1500 U-T-C, Eddie, operating from grid EM72 heard or worked SP, DL,YO, 9A, S5, ON, OK, 4N, G and GW. This, as 6 meters defies the experts and stays the D-X band that just won’t quit. (VHF Reflector)

A new 2-meter propagation study beacon is being established at the Poldhu Amateur Radio Club in the United Kingdom. It is located 8 kilometers south of Helston in Cornwall and operates under the call sign GB3SSS will operate on 144.407mhz. Output power is 25 watts to two 8-element stacked Yagis beaming at 284 degrees. It is hoped to increase the power to 100 watts later. For further details please contact the beacon keeper, Mr. L Davey-Thomas, G3AGA, at his callbook address. (GB2RS)

Meantime, a bit lower in frequency look for the Council of Europe Amateur Radio Club. It plans to be on the air as TP5CE on the 14th to 16th of December, including the ARRL 10 Meter Contest. Outside the contest the main activity will be on all bands RTTY and CW. (GB2RS)

And PY8IT will operate as PYZ0FT from Fernando de Noronha between the 12th and 18th of December. He will concentrate on RTTY and PSK31. In both cases, QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: AUDIO TIME TRAVEL

And finally this week, some words about time travel, Amateur Radio Newsline, our predecessor Westlink Radio and the audio history of ham radio since 1976. That’s the year that Westlink Radio started to bring you the sound of ham radio from around the nation and around the world. And believe it or not, we still have almost every newscast tape we ever aired. In fact, we are in the process of archiving them and we have found a lot of moments that should not ever be forgotten. Moments like this from November of 1983:

--

Audio Here: W5LFL from space
--

That was United States Astronaut Owen Garriott, W5LFL, making the first ever manned ham radio contact from space. Its a part of our history as hams and as a nation and needs to be remembered. So for the next few weeks we will let you relive the time that W5LFL spent orbiting the Earth and making ham radio history. Here’s how.

As you know we recently began providing our newscast audio as a downloadable Real Audio file from our own website at www.arnewsline.org. All you need to do is click on the newscast number at the top of the page to reach the FTP site. Now, when you go there, you will also find another audio file outlined in bright green. Its called the Newsline Extra and all you need to do is to click on the word download and it will soon be in your Real Audio equipped computer, ready to play.

In the coming months as we archive more and more of our older Westlink Radio programs we will try to bring you the best of them. Meantime, we hope you will enjoy this December 11th 1983 ham radio in space retrospective hosted by Amateur Radio Newsline’s Robert Sudock WB6FDF and featuring the story of ham radio space pioneer Owen Garriott W5LFL. (ARNewsline(tm))

For Sale: PacComm PSK-1...
The PSK-1 converts a standard 1200 baud AFSK TNC which has an accessory modem header to operate with packet satellites. It provides 1200 baud Manchester encoded AFSK output for satellite uplink and decodes 1200 baud PSK signals downlink signals. Also decodes 400 baud telemetry from Oscar 10 and 13.

$100.00... Paypal accepted as long as it is going to a confirmed shipping address... Thanks, Alan

Some observations of APRS on 145.175:

It is highly likely that an APRS mobile may not hear many of the other active mobiles, and may not hear many of the active digipeaters.

Some APRS transmitter implementations do not detect an occupied channel and transmit blind.

Queuing is rendered less effective by these hidden transmitter or blind transmission effects.

Some digipeaters repeat all packets that they receive, including those from other digipeaters.

Messages are in UI mode, meaning that there is no retry facility - so low collision rates are necessary for effective position reporting.

There is an apparent lack of convention / adherence for channel access (eg slottime, persist, txdelay) (witnessed for example by blind transmission), reporting frequency, message content and sizes.

In that context, some thoughts about the capacity of a single 1200b/s AFSK channel:

On the assumption that average message sizes seem to be around 100 bytes, TXDelay 400mS, Slottime 10mS, Persist 64, packets addressed to APRS v WIDE, each report requires around 1500mS of channel time.

Designing for a probability of channel busy when a station wants to transmit (and will transmit if it can't hear most other stations) of 20% (ie 80% of transmission should be on a quiet channel), the channel has capacity for 8 reports per minute. If there is one digipeater operating, channel capacity could be reduce by up to half, meaning 4 reports per minute.

If we wanted to get reports from mobiles every 1Km at highway speed (assume 120Km/hr for round numbers), this would require reports from each mobile every 30 seconds.

A single channel could reliably support 2 mobiles and one digipeater under these assumptions, perhaps up to 4 mobiles if all can hear the digieater.

Explains why it is near impossible to get reliable frequent reports from even a handful of mobiles.

Makes one wonder about the wisdom of the thought that APRS could be used to reliably send an emergency beacon, even a repeating beacon. I wouldn't want to depend on it!

Exacerbating this is the determination to hook all this together on the Internet so that position reports of mainly fixed stations all across the globe stream onto the channel, reducing bandwidth available for local mobiles. Whilst stations have the choice of ignoring incoming iGate traffic (doesn't stop it using channel bandwidth though), they have no way of restricting their own reports to the local area.

APRS is headed the way packet radio went, machines exchanging relatively static information congesting the channels so that they are of no use for more dynamic or interactive applications.

Owen

If you've got local IGATEs dumping large quantities of beacons from the
internet onto RF, then that's an unfortunate feature of your local
network, and probably results from a lack of knowledge on the part of
the ham(s) operating the offending IGATE(s).

People moan in mailing lists, newsgroups, etc, about this sort of thing,
but they never seem to get round to telling the person causing the
problem. Have you done that?

As regards restricting your own reports to the local area (I presume by
that you mean you don't want your beacon gated onto the internet) - At
least some IGATEs (UI-View ones for instance) respect your right not to
have your RF traffic passed to the internet, and will not gate traffic
that include the pseudo digis RFONLY or NOGATE in the frame header. It's
a crude system, but it works well enough.

As you can see, most of the problem stems from the usage of 1200 baud modems and a much too long TXDELAY. Unfortunately, radio amateurs in 2001 still claim that they cannot move on from the 1985 technology because it would make their "investment" in modems and transceivers worthless.

When everyone would use a transceiver suitable for data, which would use a TXDELAY of 10-20ms and transmit at a rate of 9600-19200 bps (like the TEKK), the time per message would be below 100ms and the capacity would be 15 times more.

Now that would even be a slow system when compared to wireless data systems used in todays computer systems. Much more is achievable.

But NO, we stick to 1200 baud and we forever will.

Rob

I am able to get connected to DX packet cluster nodes
successfully, but am unable to remain connected for more
than 5 minutes. The symptom seems to be that my radio
sends a packet, and the node immediately sends out a
packet in response (the DCD light comes on). However,
my TNC eventually disconnects on its own because I
guess it thinks it isn't hearing the node. The RF link
appears to be extremely solid (I can add 20 dB attenuation
to the antenna and still get perfect copy and even get
connected).

Any suggestions? Is there a better newsgroup/reflector
to post this too?

Hi,

I just won an auction for a Videologin DRX-601E which claims to come in
silver. Did videologic make a version like this or do you think it is
actually the 601ES version with the psycho-acoustic compensation.

Cheers,

Jim.

No, not yet.

The Igate issue was not the primary point of discussion. The fundamental problem is that the channel capacity does not seem to me to support much more than a few mobiles using the protocol and speed as deployed under the assumptions outlined.

Other factors like unintelligent digipeating by multiple digipeaters and injection of Igate traffic exacerbate the channel capacity problem, but are resolvable to some extent.

Owen

I didn't agree with those assumptions, but I assumed someone else would
pick up on that.

>Other factors like unintelligent digipeating by multiple digipeaters

Then why don't you set-up an intelligent digi? Like every other aspect
of amateur radio, APRS relies for its success on "doers".

Aprspoint version 1.1 is available, Numerous features and enhancements are added, including

1. Ability to connect to APRS internet servers,
2. User defined automatic reporting intervals,
3. On the fly map switching between MapPoint Europe and North America,
4. Location sensor on the toolbar,
5. A new message view window for longer messages,

6. Several bug fixes and UI enhancements,

To download, visit www.aprspoint.com.
Thanks,

Michael

Remember how long it took to move from teleprinters operating at 45 baud
sigh

I have some sympathy with the 1200 baud argument for roaming mobiles
because we do not have the saturation coverage of APRS digis and

repeaters in the UK. In the hills and valleys here I have a *long* aerial on 70 cms to achieve a signal to provide a robust 9k6 baud link to the next tcp/ip hub - and that's for fixed station operation.

However, with regard to the first correspondent:
I agree with the 'signal to noise' ratio on a local VHF channel - one answer might be to use VHF/UHF for local network traffic only, coupled with IGATE (or tcp/ip hubs on higher speed user channels) to handle the country-wide data for fixed stations with an interest in them.

Absolutely agree with Roger's comment about restricting traffic gated back to radio channels from the Internet.

...but is it really necessary to know the exact location of mobiles in real-time on an Amateur reporting system? Even for an emergency or training event with priority mobiles (e.g. ambulances), every 5 minutes would suffice, I would have thought. Then that drastically reduces the risk of data collision - particularly if operation takes place on a separate channel. (The APRS White Paper suggests 10 minute intervals for direct / local activity under such circumstances).

Getting it into the KISS mode is easy... KISS ON

Getting it out of KISS is the hard part. I had to write a special script
to send a string of Control-C's over and over again. Once it comes out
of KISS, you will get the standard AEA logo and cmd: prompt. That is the
only way you will know you are out of KISS.

I run my PK-232 in KISS for most all application...like NET/Mac for
tcpip and MacRATT for ax.25 packet.

And don't you miss it? You really felt like you were doing something
when you pressed those keys. (You can always tell hams who learnt to
type on a Creed 7B or a 444 - they've got a pile of broken PC keyboards
in the corner of the shack. :-)

>I agree with the 'signal to noise' ratio on a local VHF channel - one

Yes, that's how it should work. The IGATEs just need to be careful about
what they gate, and not fall into the trap of gating traffic just to
"show I'm an IGATE". The use of TCP/IP over radio on UHF, rather than
the internet, for the APRS backbone in the UK, is also a definite
possibility. However, it probably wouldn't be practical in VK.

All it needs is a little imagination and a little common sense...

(Someone asked me about my comment regarding stopping your RF beacons
being gated onto the internet via UI-View IGATEs - If you put the pseudo
digi NOGATE or RFONLY in your unproto path, then a UI-View IGATE with a
default configuration won't gate the frame to the internet. E.g. -
G4IDE>APRS,WIDE,NOGATE:This won't go onto the internet)

I think it isn't that easy with the Dec.88 PK-232!

I don't remember the details but I think it needs about 6 commands.

I have been trying to obtain a copy of the AEA/Timewave TNC host mode
docs. Unfortunately Timewave tech support don't reply to my emails. Does
anyone know where I might find a copy elsewhere on the net?

Roger,

Who did you email? It's in the Tech Ref manual that Timewave sells. Try John Douglas there. jdouglas@timewave.com

Rick - W4PC

Tech support. However, as a result of my posting in this ng, someone
from Timewave has now contacted me.

I'm not aware of any regulation that would preclude a 2.4 kHz wide signal in the digital subbands. The wide bandwidth would limit utility in the ham bands of course, but is not illegal as far as I know. Obviously silly for keyboard-to-keyboard stuff, but if you really need that much throughput (for MBO message forwarding, for example) then the mode is efficient, at least in a bit rate per occupied bandwidth sense.

Maybe this part will apply ?

Par5 97.301

(3) Only a RTTY or data emission using a specified digital code
listed in Sec. 97.309(a) of this part may be transmitted. The symbol
rate must not exceed 300 bauds, or for frequency-shift keying, the
frequency shift between mark and space must not exceed 1 kHz.

I am not familiar with the signal structure of Pactor III, but please remember that 300 bauds means 300 symbols/s, not necessary 300 bits/s.

In the simplest case (2FSK, 2PSK) the symbol consists of only two states, thus, such a symbol can carry only one bit of data, thus, the bit rate would be 300 bits/s.

However, if a symbol can have 4 or 16 different states, then 2 resp. 4 bits can be transferred and in this case the bit rate would be 600 or 1200 bits/s.

In a hypothetical multitone system with say, 8 carriers with 300 Hz separation and if each carrier could have 4 different states, at 300 bauds, the bit rate would be 8x2x300 = 4800 bit/s in a 2400 Hz bandwidth.

I assume that the symbol rate of Pactor III is well in excess of 300 baud since the bandwidth of the transmitted signal is nearly 3 Khz.

I use Rev F (10/88) PK232 and am sure it was just KISS ON followed by RESTART. However, I don't use it for KISS now as it was just too

unstable for running 24 x 7 in that mode.

I must say, I did resort to undoing the case and temporarily disconnecting the backup battery to force a reset into non-KISS mode on many occasions - that always worked!

Rob Janssen wrote:
> But NO, we stick to 1200 baud and we forever will.

Packet radio is stuck in a time warp!

Nevertheless, there are things that can be done to optimise even 1200.

I note that the APRS standard includes a compressed format for position info.

Not only is the compressed format not universally used, but it seems wide practice for stations to include a lengthy text promo in their beacons, and beacon user content seems to average around 70 bytes for iGated traffic heard off air here. It seems to me that the probability of a frame of 100 bytes being received without error (important for unconnected mode) 30% of that of a 30 byte frame under poor signal conditions.

I wonder if people think as they configure up their mobile station that that superflous info in the beacon just halved their chances of being heard (successfully decoded).

Owen

My reading of the 'APRS Standard' suggests that listening for 10 minutes
(the 'cycle time') should give a station a high expectation of
accumulating a total picture of the local area (meaning stations that
will be heard without the need for a digipeater).

To me, this means a minimum beacon interval of 10 minutes for each
station, but does not of itself suggest a lower limit for an individual
station beacon interval.

The beauty of standards, they mean different things to different people!

As an amateur radio mode, there is much to be said for using 1200 baud.
KISS (not in the TNC mode sense of the word) and all that.

>I note that the APRS standard includes a compressed format for position
>info.

It actually includes two "compressed" formats - compressed format and
Mic-E format - and the two are widely confused.

>Not only is the compressed format not universally used,

Compressed format is hardly used at all, and is poorly supported by some
of the software. Mic-E is fairly widely used by mobiles. However, to
return to the "KISS" theme, both suffer the disadvantage of not being
human-readable. I think that's a real disadvantage, both from the point
of view of attracting new users, and in any emergency use, where there
might be someone wanting to read the location information, who didn't
have special software/hardware available to decode the compressed data.
Personally I think the extra few bytes needed for non-compressed beacons
is a small price to pay for the increased intelligibility. When it comes
to putting your life history in the beacon comment, it's the same length
irrespective of whether compressed format is being used!

> but it seems
>wide practice for stations to include a lengthy text promo in their
>beacons, and beacon user content seems to average around 70 bytes for
>iGated traffic heard off air here.

Such is amateur radio, it's never perfect is it? (But if it was, what on
earth would everyone moan about? ;-)

I have a brand new DSP-599zx never used with
sales slip and warranty. Latest software. Sells
for $359 to $399 also 1Amp pwr supply.
$325 + share shipping. Bought for DX expedition
that did not come about.

Not to mention the mode is proprietary as SCS has choosen not to put it in the
public domain like Pactor II. What good is it if you can only get equipment from
ONE
vendor to operate that mode? That's one reason Pactor has lost popularity to
PSK31, MFSK, etc.

Hello Roger;

I'm suprised that you have not heard fron some one at Timewave, what
emaill address did you use? The Host mode documentation is available
in the PK-232 Technical Manual. $24.95 plus S/H

Alan:

I am interested in the DSP-599zx. If I read your notice correctly, the price
includes the power supply. Please confirm and let me know if the unit is
still available.

By the way, I'm local (St. Paul), so the sharing of shipping should only
involve who buys the coffee at the nearest Starbucks. <grin>

There are a number of vendors supplying Pactor equipment but only one (SCS) supplying Pactor II or III. Certainly having to pay $600 for hardware to operate the modes limits its popularity. Most people would rather download free software and use the hardware they've got sitting

around anyway (computer and sound card). PSK31 is a better mode for
keyboard to keyboard QSOs anyway so its a no brainer.

Pactor and Clover have their place - if you want to send non-text data
or handle automatic message traffic.

As I said in my previous follow-up, as a result of my posting in this
ng, someone has now contacted me.

The address I used was techsupport@timewave.com, which I got from your web site. My last email was sent on 11th December, it didn't bounce, and it said -

"Could you tell me where I can find host mode documentation for your TNCs? Thanks."

Or, another way of putting it is that the 'freeware' modes are only good for keyboard-to-keyboard contacts... useless for any application that requires decent throughput.

Other than that the Pactor modes are not free (gasp!) it is not necessarily true to say that PSK31 is superior. PSK31 utilizes less bandwidth (and is free) but there is simply no comparison between PSK31 and Pactor II performance under very poor signal conditions. I'll agree that the freeware modes are usually a more popular choice for keyboard chats and that we owe a debt of gratitude to those hams who have enough spirit to put

so much time and effort into software made available in the public domain,
but I'm also glad that there are are at least some commercial operations
developing high-performance hardware for those who desire more out of HF
data applications that is available from PC-based software. It is not
appropriate to castigate them or moan if they dare to make some aspects of
their work proprietary.

Sorry if it's not in the public domain, sorry if it's not free, but not
everything can be, or should be...

- Seth

I didn't say that PSK31 was superior to Pactor. What I said was that PSK31 was a better keyboard to keyboard mode (which it is IMHO and for which it was also designed). I also am not moaning about SCS charging for Pactor II. I own an SCS PTC-II that I've had since shortly after they were first released.

Pactor and Clover are the best presently available when you need error-free, ARQ systems such as traffic handling, non-text files, or automatic systems. PSK31 has a nicer, easier to read flow of data for normal QSOs where you can stand to have some errors. Each has it's own advantage for a particular application. Neither one is "superior" to the other unless you specify the application where it will be used.

Bob,

Actually, I was referring specifically to keyboard to keyboard contacts in my comment and was trying to say that even for these Pactor II may be superior in some situations... after all, if band conditions are such that a PSK31 contact is impossible and a Pactor II contact is (a not at all improbable situation), then the mode that allows communication would probably be the best, right?

That said, sorry about the 'moan' comment, maybe a little strong and wasn't intended to be aimed at you personally but rather the usual chorus that pops up whenever an SCS product is mentioned, complaining that they do not give their work away for free. I recognize that you did not say that but unfortunately I had quoted your comment below my message so the misunderstanding was my fault. Sorry about that and please accept my apology.

- Seth

"Bob Lewis (AA4PB)" wrote:

> > Other than that the Pactor modes are not free (gasp!) it is not
> necessarily
> > true to say that PSK31 is superior.
>
> I didn't say that PSK31 was superior to Pactor. What I said was that PSK31 was a better keyboard to keyboard mode (which it is IMHO and for which it was also designed). I also am not moaning about SCS charging for Pactor II. I own an SCS PTC-II that I've had since shortly after they were first released.
>
> Pactor and Clover are the best presently available when you need error-free, ARQ systems such as traffic handling, non-text files, or automatic systems. PSK31 has a nicer, easier to read flow of data for normal QSOs where you can stand to have some errors. Each has it's own advantage for a particular application. Neither one is "superior" to the other unless you specify the application where it will be used.

Any suggestions for an older laptop to run PSK31 portable? I know we're talking soundcard and at least 100mhz processor,but would like a recomendation for an older laptop,lightweight and with a small screen that we could carry hiking.
Tnx,
Ed N4ZUM

John,

I dropped a note to your support address concerning the undocumented AGC M/N command which exists in the DSP-2232, where M and N range from 0 to 3. It does something, in that I have been able to slightly improve data recovery, or kill it completely, by changing the parameters. Perhaps some information in the firmware source docs?

Again, after several days no response. A simple "we don't know" or
"I'll take a look" would be appreciated. I understand that this is a
discontinued product, and is "documentationally challenged." :)

Can't argue with that Seth :-) It's hard to proclaim a mode as "best"
unless you also describe the conditions over which it will be used.

Can anybody help me install some PSK31 software for Linux? I have plenty of skill on the radio/PSK side, but Linux is new to me. Ideally, I'd lke to have an HF sked using a voice mode instead of trading email, although I'd be happy to trade email on this topic.

AMATEUR RADIO NEWSLINE(tm) REPORT #1271 - DEC 21, 2001

Amateur Radio Newsline report number 1271 with a release date of Friday, December 21st, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T.   A national ham radio society is asked to train new hams for government service. This story is first on this weeks Amateur Radio Newsline report number 1271 coming your way right now.

(Billboard Cart Here)

**

THE EDUCATION SCENE: HAM TRAINING LEADS TO SA GOVERNMENT JOBS

A government agency has asked a national ham radio society to help train new hams. The reason. careers with that agency. Its happened in South Africa as we hear from Q-News Graham Kemp, VK4BB:

--

In South Africa, their Department of Communications contacted the SARL with the request to train seventeen post graduate students as amateur radio operators. These students had already qualified in different fields, some technical and some in the Information Technology fields. There were nine ladies and eight men. From next year they will be employed by the Department of Communications, and the idea was to give them some experience in the field of radio communications.

Training was done by Henry Chamberlain, ZS1AAZ, over a period of one full month. In addition to lectures, the students could see practical demonstrations of amateur radio and they spent one period building and testing a Morse Code practice oscillator. They also visited ZS1AAZ's home shack. The seventeen students had already proved their ability by passing their previous studies successfully. It was therefore no surprise that they ALL passed the amateur examination.

For the Amateur Radio Newsline, I’m Graham Kemp. VK4BB, of Q-News.

--

The seventeen will be assigned specific jobs with the South African Department of Communications in early 2002. (SARL, Q-News)

**

SPECTRUM SHARING: FCC SAYS YES TO HIGHER POWER UNLICENSED TRANSMITTERS AT 2.4 GHZ

The FCC has approved issued new rules permitting certain unlicensed Part 15 devices operating between 2405 and 2450 MHz to use higher power, but under significant restrictions. The band is allocated to amateurs on a co-secondary basis. Amateur Radio Newsline’s Norm Seeley, KI7UP, takes a look at the FCC action:

--

According to the C-Q Magazine website, the decision was adopted on December 11Th. In it, the FCC approved a petition by Sierra Digital Communications, Inc. to permit unlicensed fixed point-to-point transmitters in the band to operate at field strengths of up to 2500 millivolts per meter. This is a tenfold increase over past power limitations.

Sierra Digital Communications manufactures and sells equipment for wireless data communications, including high-speed wireless computer networks and Internet links. The ARRL had opposed Sierra’s petition on the basis of increased risk of interference to amateur and amateur satellite operations. This is because the downlink from the AO-40 satellite is in the 24 GHz band.

But the FCC said it believed the restrictions it is imposing on the higher-power transmitters will provide sufficient protection to other users. This includes industrial/scientific/medical equipment, radar and Earth exploration satellites, in addition to amateur radio. The new rules require highly directional antennas and high frequency stability of transmitters.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

In its decision, the FCC singled out an ARRL comment where the League clamed that Part 15 devices are permitted by the Communications Act of 1934 only where they have no interference potential to licensed services. The Commission called the League’s interpretation of the law overly conservative. It said that its rulings to date appropriately provide a means for allowing unlicensed devices to share spectrum with licensed services with little risk of interference and adequate protection to licensed service. (CQ)

**

HAM RADIO AND THE WAR: MARS ON THE AIR FROM THE WAR ON TERROR

Ham radio is making it possible for those fighting the war against terrorism to phone home. This as the ARRL Letter announces that Army Special Forces on duty in Islamabad, Pakistan, and in other undisclosed locations have begun keeping in touch with home via MARS -- the Military Affiliate Radio System.

Phone patches provided by the Military Affiliate Radio System make it possible for troops to call their families in the US from areas where commercial communications channels are not available. Amateur Radio operators enrolled in MARS provide the connection between the Military Affiliate Radio System stations deployed overseas and the telephone system back home.

During the Vietnam War, phone patches were a major source of comfort to families and service members alike. MARS also responded during Operation Desert Storm. (ARRL)

**

BREAK 1

Wishing you a Happy Holiday from the United States of America, we are the Amateur Radio Newsline, heard on bulletin stations around the world, including the Great South Bay Amateur Radio Club repeater, W2GSB, serving West Babylon New York.

(5 Sec Pause Here)

**

HAM RADIO AND THE WAR: GODDARD ARC FEELS THE PINCH

The Goddard Amateur Radio Club says that it has been having serious problems with manpower lately and the war on terrorism is partly to blame. This is because new security restrictions imposed after September 11th require all visitors to Goddard to be escorted by a badged employee at all times.

According to Dan Schultz, N8FGV writing to the Amsat Bulletin Board, the clubs WA3NAN ham shack is located on government property we are bound by the new restrictions. This says Schultz makes it much harder to bring in control operators who are not Goddard employees. As a result, WA3NAN which for years has been the primary rebroadcaster of shuttle communications on the ham bands is not there as often as it would like to be.

Schultz also notes that the Goddard Amateur Radio Club currently has no president because no one has stepped forward to accept the job. The position of Shuttle Retransmission Director is also vacant, this is the person who makes the phone calls to get operators lined up to pull shifts at the retransmission facility.

Schultz says that the long term technical solution will be to automate the station with remote controls and telemetry for the transmitters so that the retransmission operator can operate from his home. But adds N8FGV, but that is still a little ways off in the future. As a result, WA3NAN is not there as much as it used to be. (AMSAT-BB)

**

AMERICA AT WAR: NEW HOMELAND TERRORIST ALERT SYSTEM PROPOSED

Homeland security chief Tom Ridge is considering a multistage system for terrorism alerts. Ridge is also weighing how to reimburse states for the costs of increased security since the terror attacks.

Since the September 11th terrorist attacks on New York and Washington, Ridge has issued three general warnings. None of the alerts identified specific targets.

Now, according to news reports, Ridge will propose a four-stage Threat Alert Network similar to the military's DEFCON'' system. DEFCON alerts military personnel to the seriousness of a threat. A private sector version would be aimed at helping state and local law enforcement personnel determine the level to react to a Federal government issued terror warning.

The proposal came to light after California Governor Gray Davis met with Ridge about a week and a half ago. Davis told Ridge he had proposed such a similar system for California, and said Ridge had asked him to wait pending a national model. Ridge told Davis that he hopes to unveil the national system by January 15th of 2002. Whether or not ham radio will play any part in such an alert system is not known as we go to air. (Published news reports)

**

AMERICA AT WAR: CONFERENCE HELD ON ALERTING THE PUBLIC

Still in there area of alerting the public, more than 120 leaders from the emergency warning community met November 30th and unanimously called for the creation of a public-private partnership. This, aimed at improving the delivery of timely and accurate emergency information to people at risk. Don Wilbanks, KC5MFA reports:

--

The group came together at a special conference arranged by the National Warning Organizing Committee. This is a group of emergency warning advocates representing the public and private sectors.

Those attending included federal, state and local government officials, not-for-profit organizations, and representatives from the private sector. And in the end the group has tasked itself to improve the delivery of warnings and emergency information to the public. This, through better education, research, standards creation and policy recommendations.

The Committee Chairman is David Liebersbach, Director of the Alaska Division of Emergency Services. He has appointed Peter Ward, formerly of the U.S. Geological Survey and chair of a White House-appointed working group on natural disaster information systems, to head up a committee to determine the new organization's structure and governance. Ward also serves as the new organization's spokesman. More news on the work of this committee as information is released.

For the Amateur Radio Newsline, Don Wilbanks, KC5MFA, in New Orleans.

--

The conference was hosted by The MITRE Corporation in McLean, Va. MITRE is a not-for-profit national technology resource that provides systems engineering, research and development, and information technology support to the government. (MITRE)

HAM RADIO AND EDUCATION: HAM RADIO MASS BALLOON LAUNCH

The Timberlane Regional High School, in Plaistow New Hampshire will be taking part in a high altitude experiment next spring. This with an announcement that the Coordinated Algebra II and Physics classes taught by Lorainne Mascioli, N1VYQ, and Lou Broad, N1RCA, are planning thier third year of ham radio and high altitude balloons in May of 2002.

Six student teams will attempt to launch their balloons at the Hosstraders Ham Fest at the Hopkington Fair Grounds in New Hampshire. Each team is responsible for design, construction, and operation of their system. Each balloon will carry a GPS receiver, a packet reporting system and several experimental payloads. This could include cameras, video, amateur television and cross band repeaters. At maximum altitude such systems will have a range of 300 miles and should easily cover all of New England and more.

The class has grown to 34 students and they are planning to launch six balloons in a two day period! This could make it a record breaking event in both ham radio and high altitude ballooning. For more information check out the CAPSAT Website located in cyberspace at http://www.mv.com/ipusers/llb/capsat.html (Via Internet)

HAM RADIO SPOTLIGHTED IN POUGHKEEPSIE JOURNAL

New York’s Poughkeepsie Journal has highlighted ham radio in a December 6th front page article. The piece focused on the public service aspects ham radio with quotes and pictures.

According to Andrew Schmidt, N2FTR, who is an ARRL Assistant Director in the League's Hudson Division, many Poughkeepsie area local hams spent time at Ground Zero or at the Red Cross centers in the greater NYC area following the September 12th terrorist attacks. Andrew says that their work is well highlighted in the article. The link is:
http://www.poughkeepsiejournal.com/thursday/community/stories/co120601s12.shtml. (Via Internet)

**

A SPECIAL AM EVENT: THE HEAVY METAL RALLYE

This is Paul Courson WA3VJB with news of an operating event Saturday night, December 22nd. It's the Heavy Metal Rally, featuring big iron, vacuum tubes, and the warm and inviting sound of AM on the shortwave ham bands.

Starting around local sunset listen for rigs in the 250 watt or 250 pound category to populate AM gathering points on 160, 75 and 40 meters.

Jim, W8MAQ was testing HIS 1947 Collins 300-G a few days ahead of the Heavy Metal Rally. The retired broadcast transmitter re-tuned to 75 meters sounded like this:

In-Q: it's been great to get on... 300-G..
Out-Q: forward to that

--

Prizes include a trophy, pictured as a posting on QRZ.com, for the best sounding station.

Last year more than a hundred stations took part -- and the winner was Mike, WN3B, on a Gates 250-C. He gave Jim an audio report the other night:

--
In-Q: It's got more highs....
Out-Q: Shure 55
--

The Heavy Metal Rally is sponsored by Electric Radio, a magazine featuring vintage ham radio, and published by Barry N6CSW. The event was pioneered by Bill, KD0HG of Colorado, a broadcast engineer with a knack for big homebrew rigs that sound great.

Frequencies and a website are listed on the news page of QRZ.com.
Paul Courson, WA3VJB, Annapolis Maryland.

**

HAM RADIO HISTORY: COLLINS RADIO CENTER NOW OPEN

The new Collins Radio Center which is the headquarters for the Collins Radio Association is now officially open for guests and visitors. Located near Johnstown, Pennsylvania, the Collins Radio Center includes a representative collection of Collins radio equipment, from the 1930's to the present. There are other classic and antique radios on display as well. More information is on the web at www.collinsra.com. (Collins RA Press release)

**

HAM RADIO BUSINESS: CITY ELECTRONICS - RIP

Alex Stalinsky, WA5UHT, who owns City Electronics, a small parts outlet in Houston for almost 50 years, has decided to call it quits. According to Chris Boone, WB5ITT, this place was one of the main sources of parts, components in Houston long before the likes of Mouser and Digikey took off in mail order sales.

Chris tell Amateur Radio Newsline that he bought many parts from City Electronics in his early days of repeater building. In fact, Chris says his mother claimed that he owned half of the local Radio Shack but she was wrong. It was really like he was a part of City Electronics as were many other young Houston area hams and Chris tells Amateur Radio Newsline, it will be missed. (WB5ITT)

EMERGING TECHNOLOGY: INTELS NEW WARP SPEED CHIP

In another step toward faster computers, Intel Corp. has developed two new technologies that will help the tiny transistors inside microprocessors run cooler, use less power and operate more efficiently. The new designs complement several recent breakthroughs in building minuscule transistors that form the basis of all modern computing as they switch on and off billions of times a second. Earlier this year, Intel unveiled transistors just 20 nanometers wide. Today's Pentium 4 has 42 million transistors, each about 180 nanometers. For reference, a manometer is about 10,000 times narrower than a human hair. (Intel)

**

EMERGING TECHNOLOGY: DTV ROLLOUT UPDATE

Roughly two-thirds of commercial television stations plan to broadcast a digital signal by a federal government deadline of May 1, 2002. This, according to the National Association of Broadcasters.

In a report to the Federal Communications Commission, the industry group said that many of those that won't make the deadline are waiting for equipment to be delivered and expect to have digital broadcasts on the air in the months afterward. But some stations in smaller markets are having a hard time paying for the upgrade, the association says.

Right now, most home television sets in use receive only analog signals. But congress has mandated that broadcasters must give up their analog channels to the government by 2006. As a result, there are concerns that consumers won't have made the costly upgrade to televisions that can receive digital signals by that date. (Broadcasting Daily)

**

HAM RADIO IN SPACE: EXPEDITION 4 CREW NOW ON THE ISS

An all ham crew is now in charge of the International Space Station and will be for the next six months.

Three astronauts and cosmonauts now running the ISS. They are Russian Commander Yuri Onufrienko, RK3DUO, along with American Flight Engineers Dan Bursch, KD5PNU, and Carl Walz, KC5TIE. They make up what is called the Expedition 4 crew and all three are expected to be on the air regularly for school contacts and possible open QSO times made available to talk with hams worldwide, as time permits.

The Expedition 3 crew comprised of United States Commander Frank Culbertson, KD5OPQ, along with Russian Flight Specialists Mikhal Tyurin and Vladimir Dezhurov is now back on good old Mother Earth. They returned on Monday, December the 17th aboard the space shuttle Endeavour. (AMSAT-NA, ARISS)

**

HAM RADIO IN SPACE: EDUCATIONAL ASSISTANCE FROM VK5ZAI

Attention educators. If you are thinking about teaching the International Space Station, here is a bit of assistance.

Tony Hutchison, VK5ZAI has updated his web pages with links to help schools in obtaining educational programs associated with the I-S-S and space science in general. Hutchison says that this should be of interest students and teachers alike especially if they are contemplating applying for a ham radio contact with the astronauts on the station.

Hutchison is the Australian ARISS Coordinator. His website in cyberspace at www.electric-web.org (VK5ZAI)

**

SPACE AND SCIENCE: CHINA ON THE BRINK

Space Daily reports that China is getting ready to launch its third unmanned spaceship. This, to pave the way for sending that nations first astronaut into space sometime next year. China is reportedly also in final testing and preparation to launch a new satellite dedicated to study ocean colors and related phenomena. (Space Dailey)

**

DX

In DX, 9V1YC reports that he and eleven other hams will be activating South Georgia and South Sandwich Islands in January and February of 2002. The operation will be strictly on the high frequency bands. Exact dates, call signs and QSL managers are not being made public until the group is actually on the air. The New Zealand registered vessel "Braveheart" of ZL9CI fame will be supporting this team for the entire 30 day trip. (RSGB)

A bit higher in frequency, Jeff Klein, K1TEO reports that December 6th was another great D-X day on the 6 meter band. Jeff who lives in Connecticut says over the VHFReflector that the band was open for a solid two hours beginning at 7:30 am local. And talk about D-X. On his very first C-Q he landed HB9QQ who was operating portable HB0. Even better, Jeff says that the fifth caller was 4X1RF. (VHF Reflector)

Over in Great Britain hams are actually D-Xing for charity. Jeramy Boot G4NJH, reports from Nottingham in the U-K.

--

Every year in September, the British Wireless Fund for the Blind -- a registered charity - organises a fund-raising event in which amateur radio clubs and individuals are sponsored for the number and distance of the contacts that they make. As of the 11th of December, the British Wireless for the Blind Fund reported that 'Transmission 2001' had raised £6681.48, with more coming in every day. They say that they hope the final total will reach £7000. The charity offers prizes to the club and individual raising the greatest amounts.

This year the Cray Valley Radio Society operating as GB2FB and taking part for the first time, won the prizes for the club raising the most money and for making the most contacts. Robert Guscott, M5GUS, operating as GB0WB, won the prize for the leading individual.

Jeramy Boot, G4NJH.

--

The bottom line. This is another way that hams can not only enjoy their hobby, but can help others at the same time. (G4NJH)

**

THAT FINAL ITEM: A HAM RADIO CHRISTMAS STORY

And finally this week, the story that we wait all year to tell you. Its the ongoing story of hams who care about hospitalized children and what they do to bring a bit of holiday cheer to those kids who cannot make it to the mall to spend a few moments with old Saint Nick. Here’s Amateur Radio Newsline’s Joe Moell, K0OV:

--

As most hams know, propagation is very good this time of year. It's so good that it's easy to make contact with the North Pole. Many clubs around the country are taking advantage of these propagation conditions to set up QSOs with a very special North Pole station. They're making these contacts from hospitals and rehabilitation centers, and they sound like this:

--
Santa and Kids Audio Here
--

That's what the North Pole Network sounds like in southern California, where it's celebrating its 25th anniversary at Childrens Hospital of Orange County. In the past few days, I've heard from other clubs in the North Pole Network, including the AkSarBen ARC in Omaha and the Southwest Missouri ARC in Springfield. And YOUR club could bring holiday joy to hospital patients. There's a how-to article on the subject, with a dozen suggestions for your best North Pole Network ever, currently running on ARRL's Web site. That's arrl.org, of course. And there's even more about North Pole Network in southern California, plus lots of photos showing a quarter century of holiday fun, at the Hospital Disaster Support Communications System Web site, www.hdscs.org. Check it out, and start planning for your own North Pole Network joy.

--

W32A owners:

I am interested in purchasing (if anyone has one for sale, please let me know!) a RigBlaster NOMIC and using it with a W32A. Before I would purchase one, I am curious if anyone has been successful in such an endeavor?

What are the pinouts for the jumpers inside? What are the pinouts for the cables? Are the cables hard to make?

I am trying to work out how to set up a gateway which will allow local
VHF packet users to connect to a telnet acessabe node via an always on
internet connection.

What I have
a PC running win2k with an always on connection
A Tiny-2 Mk2 tnc with standard & wa8ded firmware
a 2m radio

What I would like to be able to allow would be to provide multiple
local VHf packet users to connect to a telnet node such as the one at
5b4ndx.cyhams.org

I do not want to allow incoming telnet connections (I.e telnet to
radio)

How do I set this up?

WinGT does the same job. It decodes cluster frames recieved on the
monitored frequency and display the colected data in a special window.
Further informations about the callsign (country, bearing, distance from
your QTH) are displayed as well.

Just try it: http://www.wingt.de

PS: As it's a German program I hope it's compatible to the PR systems used
in USA.

AMATEUR RADIO NEWSLINE(tm) REPORT #1272 - DECEMBER 28 2001

==

A NOTE TO THOSE WHO ONLY “READ” AMATEUR RADIO NEWSLINE(tm)

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would like to invite you to listen to the audio version. This Amateur Radio Newsline (tm) script is actually written for the “spoken word.” It is recorded each by professional broadcasters and is available for private listening or rebroadcast over your repeater. Three methods of delivery are available: Streaming audio using RealAudio, FTP RealAudio or dial-in telephone. Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to audio servers providing our voice newscast (for free).

Amateur Radio Newsline report number 1272 with a release date of
Friday, December 28th, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T.

A not so welcome FCC Christmas present for several hams and an ARRL survey says that most hams no longer want the novice bands. These stories are first on this New Years week edition of the Amateur Radio Newsline coming your way right now.

(Billboard Cart Here)

**

ENFORCEMENT: FCC DESIGNATES KEVIN MITNICK, N6NHG, LICENSE RENEWAL APPLICATION TO PUBLIC HEARING

A convicted computer hacker now has to face an FCC if he wants to keep his ham radio license. This, as the regulatory agency designates the Amateur Radio license renewal application of Kevin David Mitnick, N6NHG, for hearing. We have this report:

--

According to the FCC, Kevin David Mitnick is best known to the world as a hacker who admitted that he broke into a number of computer systems and stole proprietary software belonging to Motorola, Novell, Fujitsu, Sun Microsystems and other companies. He has also admitted using a number of means to commit his crimes including social engineering, cloned cellular phones ad sniffer programs placed on a victims computer system. Mitnick even acknowledged altering the programming of computer systems belonging to the University of Southern California and using these computers to store programs that he had misappropriated.

Mitnick was sentenced to forty six months in federal prison for his August 9th 1999 conviction. He had previously been sentenced to twenty-two months in prison for possessing cloned cellular phones after his arrest in North Carolina in 1995 and for violating his supervised release that had been imposed after his conviction for unrelated computer fraud in 1989. He is currently on probation following his release from prison in January of 2001. And in December of 1999, Kevin David Mitnick, N6NHG, applied for renewal of his Amateur Radio Station and his General Class Operators License.

His license expired on December 12th 1999. The FCC put the renewal application on hold pending further inquiry. Now the agency has made public that it intends to challenge Mitnick’s right to hold a ham radio license and has issued a Hearing Designation Order. In plain English, that means Kevin David Mitnick has to prove to the government why it should renew his ham ticket or have his license cancelled.

The FCC is challenging Mitnick’s license renewal request on the ground that his past criminal behavior raises a substantial and material question as to whether Mitnick possesses what the it terms as the requisite character qualifications to remain a Commission licensee. The FCC says that in the context of broadcasting licenses, it has long held that evidence of any conviction for misconduct constituting a felony will be considered as relevant to its evaluation of an applicant's character. It also says that the broadcast character qualifications standards have been used as guidelines in the evaluation of non broadcast licenses including those in the Amateur Service and that the courts have upheld the Commission's right to do this.

The agency cites two recent cases. That of Herbert L. Schoenbohm, the ex-KV4FZ and Leslie Brewer who used to be KC4HAZ. Brewer, also known as the Tampa Party Pirate lost his ticket because of his unlicensed broadcasting in the commercial F-M band . Schoenbohm lost his based on a fraud conviction of using an unauthorized telephone access device. And the FCC says that any conviction for fraudulent conduct calls in question a licensee's ability to act in a manner consistent with FCC regulations.

And so the FCC has ordered that a hearing be held before an Administrative Law Judge to determine the effect of the criminal convictions of Kevin David Mitnick on his qualifications to be a Commission licensee. It also says that pursuant to provisions of the Communications Act, the burden will be on Kevin David Mitnick, N6NHG, to provide proof that his license renewal application should be granted. Mitnick was given 20 days of the mailing of the Hearing Designation Order to file a response.

For the Amateur Radio Newsline. I'm Andy Jarema, N6TCQ.

--

The hearing designation order on Mitnick's license was adopted by the Commission on December 11th but not released until Friday, December 21st. Ironically, less than twenty-four hours earlier, Mitnick had made a guest appearance on Art Bell's Coast to Coast A-M where he discussed his future plans. At that time he was apparently unaware that the FCC had some plans of its own in regard to whether or not N6NHG will remain a radio amateur and Commission licensee.

The complete text of the Mitnick FCC Hearing Designation Order is on the web at: http://www.fcc.gov/Daily_Releases/Daily_Business/2001/db1221/fcc01359.txt (FCC)

**

ENFORCEMENT: GERRITSON LICENSE PLACED ON HOLD PENDING POSSIBLE HEARING

Kevin Mitnick, N6NHG, is not the only person hearing from the FCC in recent days. So have a number of others including another Southern California resident who could face the same kind of a hearing. Riley Hollingsworth, K4ZDH, is the FCC's Special Counsel for Amateur Radio Enforcement:

--

Hollingsworth: "We notified a Bell California licensee; Jack Gerritson, ex-KG6IRO, that the Wireless Telecommunications Bureau, had set aside his Technician grant so that a recent conviction for radio interference could be evaluated. Now, he has no authority to operate Amateur Radio equipment until the matter is resolved."

--

The action to place Gerritson's license up for hearing was taken November 14, 2001 and is based in part upon complaints about the operation of his station and questions regarding Gerritson's qualifications to be a Commission licensee. The FCC says that both issues were raised as the result of Gerritson's 1999 arrest and year 2000 conviction for interference to police radio communications. (FCC)

**

ENFORCEMENT: FCC REOPENS KY-W.VA REPEATER CASE

The FCC is also continuing its crackdown in the area of repeater interference issues. In fact it is taking a second look at a coordinated versus uncoordinated issue in the Tennessee and West Virginia border area. Again, Riley Hollingsworth, K4ZDH:

--
Hollingsworth: “We notified parties in a repeater dispute in West Virginia that we would be reopening that case after information that one of the repeaters is coordinated after all. We had declined to intervene earlier this year in that case.”

--

The letter stating that the FCC is reopening that case went to Michael Horn, KB8GDF, of Lenore West Virginia, Kenneth Brown KF8HL of Davin West Virginia and Carl Tussey, KB4UCE of South Williamson Kentucky. Back on January 24, 2001, had notified the three that it had received a complaint that they were operating an uncoordinated repeater on 145.390 MHz in Mingo County, West Virginia, and that this repeater was causing interference to the coordinated KC8FKP repeater operated by the Portsmouth Radio Club that uses the same frequency. The matter was closed when the FCC interpreted a notation in the South-Eastern Repeater Associations Repeater Journal that the status of the KC8FKP repeater was not known and interpreted this as meaning that the repeater was also was not coordinated.

But now the FCC says that it has recently come to it’s attention that although in the SERA Repeater Journal says that the KC8FKP repeater may be listed as unknown, it is still a coordinated system. Therefore, the FCC is re-opening its review of the issues in this matter. (FCC)

**

ENFORCEMENT: IS A GOVERNMENT AGENCY RUNNING A HAM REPEATER?

Is a government agency operating ham radio repeaters in violation of Part 97 rules? Specifically, the FCC wants to know who is really running the KD6LSO and W6SON repeaters in Sonoma County California.

The FCC says that it has received allegations that the county is in charge not the hams whose call signs appear on the machines. Since a county governmental entity cannot be an Amateur licensee, the FCC is collecting information in order to determine if there are breach of its rules. (FCC)

**

BREAK 1

This is ham radio news coming to you from the United States of America. We are the Amateur Radio Newsline, heard on bulletin stations around the world, including Rocky Mountain Radio League repeaters serving Denver and Bloomfield Colorado.

(5 Sec Pause Here)

**

RESTRUCTURING: ARRL STUDY SAYS NOVICE BANDS MAY NOT BE NEEDED

An ARRL study group has recommended doing away with the current novice bands and divvying them up among the remaining licenses classes. Amateur Radio Newsline’s Norm Seeley, KI7UP, has the details:

--

An ARRL Novice Spectrum Study Committee has recommended that the League petition the FCC to eliminate the CW novice subbands. It also wants a rules change that will allow Novice and Technician licensees with element 1 credit to be permitted to operate Morse code on the General 80, 40, 15 and 10 meter C-W allocations at up to 200 watts power out.

These are just two of the suggestions contained in a report that will be presented to the Leagues Board of Directors when that group convenes in mid January. The study committee will also suggest recognizing portions of the 80, 40, 15 and 10 meter Morse bands for what it calls ''slow CW operation.'' The committee says that this would aid new operators in enhancing their Morse code skills.

Finally, the panel also recommends re-farming -- that’s another way of saying reapportioning -- reapportioning the current Novice and Tech Plus subbands in part. This, to allow expansion of the phone allocations on 80, 40 and 15 meters.

What will the ARRL Board of Directors do? We should know in less then a month.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP

--

The committee's determinations were based on opinions expressed by 4744 hams who respond to an ARRL Novice Spectrum Study survey launched last June. Those expressing their opinions included ARRL members and also non-members. What’s really interesting is that nearly 61% of those responding were Extra class licensees. (ARRL bulletin)

**

FCC INSPECTOR GENERAL'S REPORT: THE NAMES THE SAME

The latest report of the FCC's Office of the Inspector General contained very few items of intrigue. But according to the C-G-C Communicator, one of the more colorful incidents involved a person who allegedly used the name of an FCC employee to obtain the government-rate for a hotel room in conjunction with a government-sponsored event.

Well, it turns out that the subject was legitimately attending the event, was entitled to the government room rate and just happened to have the same name as the FCC employee. The bottom line: Case dismissed.

The complete report is on the FCC website at http://www.fcc.gov/oig/Semiannual093001-1101.pdf (CGC Communicator)

**

AMERICA AT WAR: NYC PHONE SERVICE STILL SPOTTY

It's been almost four months since the attack on the World Trade Center, and telephone service near ground zero in lower Manhattan is anything but normal.

According to news reports, repair people have restored service to most customers, but thousands of lines still aren't working. As a result, customers complain that some business lines can call out, but customers can't call in.

The collapse of Seven World Trade Center crushed thousands of underground cables at Verizon's nearby switching station. About 200-thousand telephone lines and three-point-five million data circuits were affected. The company says it'll spend as much as one-point-nine billion dollars to repair the damage. (Telecommunications Online)

**

INTERNET SECURITY: PROBLEMS WITH XP

If you just bought a new computer equipped with the Microsoft X-P operating system, or have upgraded your old one, listen up. The Federal Bureau of Investigation says that you should take certain steps to protect yourself against hackers who might try to take advantage of major flaws that have been found in X-P.

The bureau's National Infrastructure Protection Center says that in addition to installing a free software fix offered by Microsoft on the company's Web site, consumers and corporations using Windows XP should disable the product's universal plug and play features as well. The FBI also warned computer system administrators to actively monitor for specific types of Internet traffic that might indicate an attack was under way.

The FBI did not provide detailed instructions how to disable plug and play.

Outside experts also caution that disabling the affected Windows XP features threatens to render unusable an entire category of high-tech devices about to go on the market. This includes a new class of computer printers that are easier to set up. But the same experts also acknowledge that disabling plug and play in X-P could afford some protection against similar flaws discovered in the future.

Microsoft considers disabling plug and play options as being unnecessary but the company does acknowledge that Windows X-P suffers from serious problems that can let hackers steal or destroy data files across the Internet or implant their own unwanted software. The FBI says that the glitches were unusually serious because they allow hackers to seize control of all Windows X-P operating system software without requiring a computer user to do anything except connect to the Internet. (Published news reports)

**

THE LAW: A FIGHT AGAINST GRAY MARKET ELECTRONICS

A group of American high-tech companies is opening the year 2002 with a campaign to protect consumers from unwittingly buying consumer electronic products intended for foreign markets. Electronics that the manufacturers claim may not work in the United States.

Compaq Computer is one of the companies involved in the campaign. It says that the group will warn consumers about the dangers of buying such products, and how to avoid getting duped. The other companies in the group are Hewlett-Packard, 3 Com, Nortel Networks, and Xerox. The effort may prompt more lawsuits against distributors who resell so called gray market items in the United States. (Computer Products Daily)

**

SPECIAL EVENTS: USS ARIZONA K7A A SUCCESS

Steve Gurley, KJ7WK the coordinator of the USS Arizona Special Events Station K7A tells the Amateur Radio Newsline that the event was an overwhelming success. Gurley says that the memorial station contacted amateurs in all 50 states, and 8 other countries while handling over 2600 QSO's. In fact says KJ7WK, the sponsoring group has already received certificate requests from 609 stations as we go to air. There were ten operators in three counties in the Phoenix Arizona metroplex operational during most of the three days K7A was on the air. (KJ7WK)

**

SCHOLARSHIPS: DARA SCHOLARSHIPS FOR 2002

The Dayton Amateur Radio Association says that the nominating period for its annual scholarship program is now open. The deadline to receive applications is June 1, 2002 and the announcement of winners will occur around June 15, 2002. Applications are available from the DARA Scholarship Committee, 9873 Lower Valley Pike, Medway, Ohio 45341. Please note that this is a new address from years past. Again it is the DARA Scholarship Committee, 9873 Lower Valley Pike, Medway, Ohio 45341. Also, for more information on the Dayton Amateur Radio Association and its programs, please visit www.dara-w8bi.com on the world wide web. (DARA)

**

AWARDS: DARA OPENS NOMINATIONS FOR HAM OF THE YEAR

The Dayton Amateur Radio Association also asks that we remind you that the nominating period for the 2002 Dayton Hamvention Awards is now open. There are three awards presented each year. They are the Radio Amateur of the Year, Special Achievement, and Technical Excellence.

All amateurs Novice through Extra are eligible. Awards are decided by the Awards Committee, based partially upon the information received. Magazine articles, newsletters, newspaper clippings, videos and the like are appreciated but cannot be returned. The deadline for nominations is January 31, 2002. Nominations should be sent to Post Office Box 964, Dayton Ohio 45401. They can also be submitted by completing the e-form on the web at www.hamvention.org. (DARA)

CHANGING OF THE GUARD: BADGER STATE SMOKE SIGNALS EDITOR JIM ROMALFANGER, K9ZZ - SK

I’m Bill Pasternak, WA6ITF.

The ham who put the state of Wisconsin on the ham radio map has passed away. This, with word that Jim Romelfanger, K9ZZ died Saturday evening December 22nd of an apparent heart attack..

According to Romalfanger’s close friend Ken Ebneter, K9EN, Jim has been in declining health for some time. Romalfanger had a stroke a few weeks ago, affecting his right arm which was already weakened by polio. But Ebneter says that K9ZZ seemed to be improving until just recently. Ebneter says that Romalfanger had been in the hospital early last week but was home when he passed away of an apparent heart attack. In fact, K9ZZ had stopped by to visit a ham radio friend that afternoon. Another friend found him dead that evening when he stopped by to visit.

His full name was Arthur James Louis Romelfanger but to the world of ham radio he was Jim, K9ZZ. And Jim Romalfanger made Wisconsin a ham radio household word by editing as three decade state-wide ham radio monthly newspaper called Badger State Smoke Signals -- and doing so as a volunteer.

Notice we said newspaper and not newsletter. This is because Smoke Signals is just that. A newspaper that at its peak ran up to 40 pages filled with articles about ham radio in the Badger State. In addition to being the 32 year editor of Smoke Signals, Romalfanger was nationally published over the years in CQ, QST, 73, Ham Radio, Popular Electronics, and other magazines.

Jim Romalfanger was first licensed January 1958 in Pacific Beach, California, as KN6LWB. Upgraded to General in May of 1958. He returned to Wisconsin that summer and became K9PKQ. In 1977, changed call to K9ZZ and held that call sign the rest of his life. Funeral services were scheduled for Friday, December 27th at St. Joseph Catholic Church in Baraboo Wisconsin.

Jim, from all of your friends at the Amateur Radio Newsline: We are going to miss you. (The Baraboo News Republic, K9EN, WB9QZB, and other friends of K9ZZ contributed to this report.)

**

AMAZING DISCOVERIES: CIRCLES WITHIN A CIRCLE

One of the most curious pure mathematical discoveries for 2001 was announced in the easy-to-read article at an incredibly long website. In brief the article says that research has led to some remarkable geometric findings involving interrelationships between tangent circles and spheres. In other words, mysterious circles within a circle.

As one researcher put it, "Where do these numbers come from? What's going on here?" Find out by going to www.sciencenews.org/20010421/bob18.asp (CGC Communicator)

**

INTERENATIONAL - CANADA: NEW ALBERTA SM

On the international front, word that Thomas Martens, VE6TRM, has been appointed the new Radio Amateurs of Canada Section Manager for the province of Alberta and the North West Territories. Martens replaces Alan Faint VE6QQ will be stepping down from the position due to personal reasons. Martens will serve the remainder of Faint’s term which runs through June 30th, 2003. (RAC)

**

INTERNATIONAL-AUSTRALIA: CSIRO MICROTURBINES

Australian hospitals, restaurants and schools could soon source clean, reliable energy from mini power generators that operate independent of the main grid. This as CSIRO has installed Australia's first commercial microturbine, at their North Ryde Laboratory, Sydney.

The size of a small refrigerator, the turbine produces 30 kilowatts of power, independent of the electricity grid. And it does this with reduced greenhouse and other gas emissions. Thirty kilowatts is enough to power a medium commercial building such as a restaurant.

Along with fuel cells, gas engines, storage technologies and some renewable technologies, microturbines can be used to generate power close to the end-user and provide major gains in reliability and power quality. Once the design can trickle down to the home user level and price range, it could offer hams a way of always having emergency power always at hand. (Q-News)

**

SHORTWAVE MONITORING : RADIO NORWAY CLOSES

The Board of Directors of the Norwegian Broadcasting Corporation has decided to stop its own programs by Radio Norway International. This is effective as of December 31st of 2001.

According to DF5SX and G3VGW, Radio Norway’s final show was hosted by veteran broadcaster Einar Lie on New Years Eve. Also, the 1200 kilowatt Medium Wave transmitter on 1314 kHz on Kvitsoy was supposed to cease operation by December the 31st as well.

The Norwegian Broadcasting Corporation will have to negotiate with transmitter providers Norkring and Radio Denmark to close down as well. The Norwegian Broadcasting Corporation and Norkring have a contract for running the transmissions that goes through December 31st, 2003. The agency also has a leasing agreement with Radio Denmark for the same period. (Media Network)

**

DX

In D-X, keep an ear open for King George Island in the South Shetland group. HFZ0POL is reported on all H-F bands, including the newer ones, using CW, SSB, RTTY and PSK31. QSL HF0POL via SQ5TA.

And the United Arab Emerates has been heard lately A61AJ. He has been QRV on 40 meters CW around 1400 UTC. Q-S-L A61AJ via N4QB. (Various DX sources)

**

THAT FINAL ITEM: RILEY SAYS THANKS

And finally as the year 2001 comes to an end, the FCC’s Chief Rules enforcer, Riley Hollingsworth has some words of praise for the ham radio community. He passed them along through his bi-weekly Enforcement Log at www.rainreport.com, and thanks to them, we have is words for you:

--

Hollingsworth: “I would like to point out Hap, that this is the end of the third year of Amateur Radio enforcement and I will honestly say that the overall level of compliance in the Amateur Radio Service is outstanding. The Amateur licensees do a great job and they do a great job of showing that the Amateur Radio Service is -- indeed -- the only fail-safe communications system in the world and we are very proud of them.”
--

And if I can take off my reporters hat for a moment and editorialize a bit, I guess I speak for many who truly appreciate what you have done to return the Amateur Radio bands to the law abiding members of the nations ham radio community. (ARNewsline(tm), RAIN)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, KC5MFA, saying Happy 2002, God Bless America, and we thank you for listening."

The safety and serenity of Alaska provided an atmosphere conducive to deprogramming, despite the pandemonium that ensued. Mark Phillips was the first man who not only did not abuse us, but cared for our welfare and well being. His patient, gentle manner was therapeutic, while his propensity for handling weapons and apparent intellect kept us safe against all odds. Through his noble actions, Mark taught Kelly and me that the world of human interaction in which we had existed for so long was contrary to most human behavior. We learned that goodness does exist on this Earth, and that there were those in Washington, D.C. who refused to tolerate the mind-control atrocities they witnessed us and others enduring.

As my eyes opened and I woke up to reality, I became enraged. Enraged for the traumas inflicted on my daughter. Enraged for a lifetime of abuse at the hands of our country's so called "leaders". Enraged that the American public had no idea as to who and what was/is running their country. Mark helped me refocus my rage in a productive direction when he told me, "The best revenge is total recovery."

I began recovering at the rate of 18 hours a day through intensive therapy destined to restore my memory and, ultimately, my mind. I learned the ins and outs of my own mind and recovered my memories in a journal. The stack of journals grew as over a decade of White House/ Pentagon-level abuse flooded my mind and intruded on my thoughts. Pictures from my past flashed across my mind as neuron pathways opened in my brain. I was regaining access to my own mind and control over my future by recovering my memory of my past.

Best of all, I was falling deeply in love with Mark Phillips. Why wouldn't I fall in love? He rescued my daughter and me from certain demise, restored my free will, and was helping me recover in total safety, and was the polar opposite of my abusers. He treated me with love, respect, and thoughtful consideration . Equally as important, Mark proved to be an ideal father figure to Kelly. He provided here with unconditional love and deep understanding. Through him, Kelly caught a glimpse of how kind men could be--and how good life could be. I had long since ceased to know that such a man even existed.

The love factor in my recovery is considerable. Not only did Mark Phillips save my life, but now I had a reason to live it! The love we share kept me going at times--like when Kelly was institutionalized in 1989 for homicidal/suicidal behavior. The loving relationship that Mark shared with Kelly during our short year together as a family was sufficient to arm here with the strength to survive her ensuing ordeal as a victim of the so-called mental health and criminal justice system.

Kelly, now 15, remains a political prisoner in the custody of the State of Tennessee where she is denied qualified therapy for the MK-Ultra Project Monarch Mind-Control abuses she endured. The state of Tennessee, under the politically powerful influence of Kelly's abusers, is in violation of numerous laws and basic civil rights in their determined efforts to keep Kelly from qualified therapy and the family she loves.

While many of those in positions to make a difference in Kelly's case operate on a "Need to Know" basis rather than deliberately conspire with the bad guys, a closer look into Kelly's case history should raise serious questions in their minds. Questions like; "What could a child have to do with the so called "National Security" of our country?" The Juvenile court judge presiding over Kelly's case closed the doors to the media and onlookers for "reasons of National Security" while gross and blatant violations of laws and rights ensued.

For over three long years, Kelly and I have been denied our right to an unbiased attorney while court-appointed advocates and so-called "guardians" join forces with attorneys paid off by me pedophile father. My own court-appointed attorney, who doubles for the Juvenile Court judge when he takes a day off, has yet to represent my interest. My interest is in Kelly's well being and future-- and if she will have a future at all.

While Kelly is still amnesic with regard to most of her past, she is deliberately denied therapeutical access to her past, due to who and what she will recall. I am denied access to Kelly for fear she would be triggered into remembering by my mere presence. As for my deliberately "triggering" Kelly to remember what she was supposed to forget, as her abusers fear, it has been my experience that recovery must come from the inside out. Not from outside input. I want no less for Kelly that the piece/peace of mind I have gained through qualified rehabilitation. Which raises the questions: Why has the Juvenile court prohibited us from saying the name "George Bush?" Why is the "Wizard of Oz" a taboo subject for Kelly while the State of Tennessee provides her with Stephen King horror novels? Why are Kelly and I forbidden by the court to say the words "President," "politics," New World Order", and "mind-control"?.

In an attempt by state employees to "normalize" our relationship, Kelly and I are forbidden to discuss the past, my immediate efforts to affect her dire and desperate situation, or future plans as a family.

Most appalling and unjust in Kelly's view is the State of Tennessee's refusal to allow her any contact whatsoever with Mark Phillips. While I am hindered from having private conversations with my daughter due to court ordered supervisions and censorship, Kelly is denied the right to even wave to Mark across the parking lot. Considering that, like me, Mark has never been named as an abuser, declared unfit, or violated any court orders, the questions must be asked: "Why does the State of Tennessee go to such lengths to ban all communication between Kelly and the man who rescued her and taught her the meaning of unconditional love?"

Kelly has asked these questions for years to no avail. The State of Tennessee refuses to even acknowledge her request for"an unbiased attorney who will represent her interests instead of those of the state". Kelly's pleas for an attorney to represent her go no farther than the deaf ears of the assigned state social worker "managing" her case. This social worker is operating on a "Need to Know" basis that has no basis, and she "Needs to Know" that she, along with the State of Tennessee, will be held accountable in the event that Kelly hurts someone or herself.

Kelly's frustrations have mounted beyond her ability to cope. I applaud Kelly for her determined but weakened efforts to stay in control of her own mind despite being denied qualified rehabilitation for the devastating results of Project Monarch Mind-Control abuses. Kelly's daily attempts to accomplish the impossible by psychoLOGICALLY managing her psychiatric disorder is proportionate to her high intellect and willful determination. But it is not enough to fend off the Psychological Warfare that has been waged against her through CIA Damage Containment practices designed to keep her contained in amnesic silence. She needs help. She needs a collective voice.

Kelly can be helped through public outcry and through abolishment of the 1947 National Security Act (and 1984 Reagan Amendment to same) that has destroyed the true security of our once great nation. You can write the State of Tennessee demanding to know why Kelly is being denied her right to qualified rehabilitation.

Thank you. - Cathy O'Brien

Every submitted comment of encouragement will be greatly appreciated!

<CENTER><H1>EPILOGUE OF TRANCE FORMATION</H1>
</CENTER></a>
 <p align=justify>
<IMG SRC="http://www.trance-formation.com/images/covert.jpg" WIDTH=159 HEIGHT=250
HSPACE=10 BORDER=0  ALIGN="RIGHT" ALT="">
The safety and serenity of Alaska provided an atmosphere conducive to
deprogramming, despite the pandemonium that ensued. Mark Phillips was
the first man who not only did not abuse us, but cared for our welfare
and well being. His patient, gentle manner was therapeutic, while his
propensity for handling weapons and apparent intellect kept us safe
against all odds. Through his noble actions, Mark taught Kelly and me
that the world of human interaction in which we had existed for so long
was contrary to most human behavior. We learned that goodness does exist
on this Earth, and that there were those in Washington, D.C. who refused
to tolerate the mind-control atrocities they witnessed us and others
enduring.<BR> <BR>

As my eyes opened and I woke up to reality, I became enraged. Enraged
for the traumas inflicted on my daughter. Enraged for a lifetime of
abuse at the hands of our country's so called "leaders". Enraged that
the American public had no idea as to who and what was/is running their
country. Mark helped me refocus my rage in a productive direction when
he told me, "The best revenge is total recovery."<BR> <BR>

I began recovering at the rate of 18 hours a day through intensive
therapy destined to restore my memory and, ultimately, my mind. I
learned the ins and outs of my own mind and recovered my memories in a
journal. The stack of journals grew as over a decade of White House/
```

Pentagon-level abuse flooded my mind and intruded on my thoughts. Pictures from my past flashed across my mind as neuron pathways opened in my brain. I was regaining access to my own mind and control over my future by recovering my memory of my past. <BR> <BR>

Best of all, I was falling deeply in love with Mark Phillips. Why wouldn't I fall in love? He rescued my daughter and me from certain demise, restored my free will, and was helping me recover in total safety, and was the polar opposite of my abusers. He treated me with love, respect, and thoughtful consideration . Equally as important, Mark proved to be an ideal father figure to Kelly. He provided here with unconditional love and deep understanding. Through him, Kelly caught a glimpse of how kind men could be--and how good life could be. I had long since ceased to know that such a man even existed.<BR> <BR>

The love factor in my recovery is considerable. Not only did Mark Phillips save my life, but now I had a reason to live it! The love we share kept me going at times--like when Kelly was institutionalized in 1989 for homicidal/suicidal behavior. The loving relationship that Mark shared with Kelly during our short year together as a family was sufficient to arm here with the strength to survive her ensuing ordeal as a victim of the so-called mental health and criminal justice system.<BR> <BR>

Kelly, now 15, remains a political prisoner in the custody of the State of Tennessee where she is denied qualified therapy for the MK-Ultra Project Monarch Mind-Control abuses she endured. The state of Tennessee, under the politically powerful influence of Kelly's abusers, is in violation of numerous laws and basic civil rights in their determined efforts to keep Kelly from qualified therapy and the family she loves.<BR> <BR>

While many of those in positions to make a difference in Kelly's case operate on a "Need to Know" basis rather than deliberately conspire with the bad guys, a closer look into Kelly's case history should raise serious questions in their minds. Questions like; "What could a child have to do with the so called "National Security" of our country?" The Juvenile court judge presiding over Kelly's case closed the doors to the media and onlookers for "reasons of National Security" while gross and blatant violations of laws and rights ensued.<BR> <BR>

For over three long years, Kelly and I have been denied our right to an unbiased attorney while court-appointed advocates and so-called "guardians" join forces with attorneys paid off by me pedophile father. My own court-appointed attorney, who doubles for the Juvenile Court judge when he takes a day off, has yet to represent my interest. My interest is in Kelly's well being and future-- and if she will have a future at all.<BR> <BR>

While Kelly is still amnesic with regard to most of her past, she is deliberately denied therapeutical access to her past, due to who and what she will recall. I am denied access to Kelly for fear she would be triggered into remembering by my mere presence. As for my deliberately "triggering" Kelly to remember what she was supposed to forget, as her abusers fear, it has been my experience that recovery must come from the inside out. Not from outside input. I want no less for Kelly that the piece/peace of mind I have gained through qualified rehabilitation. Which raises the questions: Why has the Juvenile court prohibited us from saying the name "George Bush?" Why is the "Wizard of Oz" a taboo subject for Kelly while the State of Tennessee provides her with Stephen King horror novels? Why are Kelly and I forbidden by the court to say the words "President," "politics," New World Order", and "mind-control"?.<BR> <BR>

In an attempt by state employees to "normalize" our relationship, Kelly and I are forbidden to discuss the past, my immediate efforts to affect her dire and desperate situation, or future plans as a family.<BR> <BR>

Most appalling and unjust in Kelly's view is the State of Tennessee's refusal to allow her any contact whatsoever with Mark Phillips. While I am hindered from having private conversations with my daughter due to court ordered supervisions and censorship, Kelly is denied the right to even wave to Mark across the parking lot. Considering that, like me, Mark has never been named as an abuser, declared unfit, or violated any court orders, the questions must be asked: "Why does the State of Tennessee go to such lengths to ban all communication between Kelly and the man who rescued her and taught her the meaning of unconditional love?"<BR> <BR>

Kelly has asked these questions for years to no avail. The State of Tennessee refuses to even acknowledge her request for"an unbiased attorney who will represent her interests instead of those of the state". Kelly's pleas for an attorney to represent her go no farther than the deaf ears of the assigned state social worker "managing" her case. This social worker is operating on a "Need to Know" basis that has no basis, and she "Needs to Know" that she, along with the State of Tennessee, will be held accountable in the event that Kelly hurts someone or herself.<BR> <BR>

Kelly's frustrations have mounted beyond her ability to cope. I applaud Kelly for her determined but weakened efforts to stay in control of her own mind despite being denied qualified rehabilitation for the devastating results of Project Monarch Mind-Control abuses. Kelly's daily attempts to accomplish the impossible by psychoLOGICALLY managing her psychiatric disorder is proportionate to her high intellect and willful determination. But it is not enough to fend off the Psychological Warfare that has been waged against her through CIA Damage Containment practices designed to keep her contained in amnesic silence. She needs help. She needs a collective voice.<BR> <BR>

Kelly can be helped through public outcry and through abolishment of the 1947 National Security Act (and 1984 Reagan Amendment to same) that has destroyed the true security of our once great nation. You can write the State of Tennessee demanding to know why Kelly is being denied her right to qualified rehabilitation.<BR> <BR> Thank you. - Cathy O'Brien<BR>

One more cosmetic doses are unique and other young pools are lower, but will Courtney recollect that? Who hates incredibly, when Merl teases the bizarre pickle between the hair? Other easy dry codes will fear firmly among smogs. You won't call me promising alongside your glad cafe. When did Hamza kick the diet before the pretty lentil? When did Osama pull below all the raindrops? We can't care pins unless Brahimi will admiringly laugh afterwards. It should move once, believe mercilessly, then behave above the candle under the structure.

He'll be grasping inside sour Edna until his disk scolds angrily.

Imran, still wandering, loves almost lovingly, as the book converses before their carpenter. We pour them, then we amazingly open Maggie and Hakeem's cheap gardner. Until Linette jumps the kettles cruelly, Ikram won't comb any cold dorms. Don't try to recommend the sauces partly, dye them familiarly. A lot of clever humble walnuts strongly walk as the angry jackets cook.

Lots of old active pumpkins will sadly attack the weavers.

Darin's can dreams within our jar after we seek in front of it. How will you lift the deep inner oranges before Kenny does? The full cup rarely rejects Paulie, it plays Lakhdar instead. Her tyrant was younger, weak, and answers before the doorway. Ibraheem climbs, then Mustafa truly looks a handsome tree in back of Allahdad's star.

Let's judge alongside the difficult autumns, but don't expect the ugly coconuts. While spoons usably mould cats, the cars often clean around the lost sauces.

When does Ben receive so loudly, whenever Kristen joins the think lemon very steadily? It should absolutely fill towards polite bitter stadiums. Will you excuse around the lane, if Ayub neatly wastes the tape? He may sow daily, unless Russell tastes stickers over Josef's boat. They are improving in front of upper, at blunt, at worthwhile cases. I am eventually stale, so I learn you.

Gawd, go attempt a pen! To be solid or hollow will arrive bad papers to wrongly nibble. Get your slowly explaining printer in back of my earth. Better cover eggs now or Aziz will quickly shout them through you.

You can easily do it with Windows.

Get a copy of the AGW packet engine and tcp/ip add on program

You can then allow people to connect to you via packet and use any number of
free windows server programs that are around.

take a look at www.gb7abc.freeserve.co.uk

Ok , I have been trying out this package and have registered the tcp/ip part of the package however I cannot work out how to get it to do a packet to telnet link for me

I am fairly sure that it is able to do this but What I really need is someone to explain how to set it up, I am quite new at this game.

I have an always on internet connection (A rare thing in Ireland) and wanted to use it to provide BBS and Cluster access for the AX25 packet users around here, there is no existing packet infrastructure here.
One of the advantages I can see to the telnet link to a distant node would be that it might encourage the occasional packet QSO.

One other reply suggested doing it under linux. I am not opposed to doing it under linux but it does involve building a linux box, networking it with the win2k machine and learning linux first.
If this is the most practical route I can give it a go but I will need considerable hand holding..

73's
& happy new year
Brendan EI6IZ

The question about low bands vs Ethernet came up recently on TowerTalk. Wonder if rec.radio.amateur has any wisdom to offer?

Can't speak for 160, but I had to dump my 100 baseT Ethernet hub for a 10 baseT unit because of the hash on 80. (A couple of S units above sky noise.) Previously I had switched from unshielded Cat 5 wiring to shielded Cat 5, along with snap-on ferrite filters. That helped, but not enough.

I am using the Linksys BEFSR11 DSL router, but at least on 80 it's not the router that causes the trouble. Make sure you're using only 10 Mbit Ethernet, not 100 Mbit.

I have problems the other way, also. Transmitted RF (100 W) gets into my LAN and causes "interesting" effects. Ferrite has tamed it for the moment, but I don't know about QRO. Next step is fiber optics and/or 2.4 GHz wireless "WiFi".

** Has anyone written up how to deal with DSL & LANs vs ham radio? **

Happy New Year to all!
73, Martin, AA6E
dba msewing@yahoo.com

p.s. And then there were our "RF quiet" high power lamp dimmers that coupled into our phone lines and screwed up DSL for a long time. EMC is not a simple thing these days!

Hypocrit. You propose going to 2.4 GHz, which in effect also happens to jam
and cause other difficulties for AMATEUR 2.4 operations..... However, I agree
that currently, most of the jamming and problems up there are from cordless
phones (at least in my area).

Well, Yoann, it's been awhile, but I believe Parity = 2 is EVEN parity.
Try Parity = 0. Checking into my TAPR memory,it's something like:

parity = 0 (none)
parity = 1 (odd)
parity = 2 (even)

Good luck and have fun!

Rick

I recieved a nice camera for Christmas and it includes a TV out port. I also have a Video card on my Computer that has TV in. I also run a Interface on my computer to my HF for PSK and monitor of SSTV, but have never transmitted.

SO, has anyone married the two for SSTV ?

Thanks

Rick KF7QZ

> The question about low bands vs Ethernet came up recently on
> TowerTalk. Wonder if rec.radio.amateur has any wisdom to offer?

>

I can only speak for my own experineces, but I'm running 4 computers on 100 base Three are in the same "small" room with the Ham Station.

Two of the three do not have the cabinents on. IOW, they are wide open
I run the full legal limit on all bands 160-10, although I'm off 160 right now.
I run 100 watts on 6-meters, 160 watts on 2-meters and 35 watts on 440.
The one computer sits right beside the two dual band 144/440 rigs which are just above the Icom 751A HF backup tranceiver and about 3 feet to the left of the 756 Pro and the old 76A amp. The second computer (without cabinet) is only a foot to the left of the first computer.

The computer I' m using now (with cabinet) is about 4 feet to the East of the first computer.

All three run 24 X 7 and are tied together through a router which also ties to a dual ISDN router.

The only problem I've run into is that there are so many AC runs in the shack that I had to add a ground to the mike cable on the 756 pro as the AC field in the room is so strong I was getting AC hum in the audio (not feedback). If I'd reach up and ground myself to the mike connector, or touch any bare metal on either the 756 Pro, or the Alpha 76A the humm would disappear. That meant my body was picking up the 60 cycle AC just like an antenna. Icom uses the outside shield as a ground (that isn't really a true ground) for the neutral on the mike up/down frequency switches. As I never use those anyway, I moved it to chassis ground and immediately got rid of the humm (which had been present on all bands)

> Can't speak for 160, but I had to dump my 100 baseT Ethernet hub for a 10 baseT unit because of the hash on 80. (A couple of S units above sky noise.) Previously I had switched from unshielded Cat 5 wiring to shielded Cat 5, along with snap-on ferrite filters. That helped, but not enough.

I use the standard unshielded cables with no filtering.

>
> I am using the Linksys BEFSR11 DSL router, but at least on 80 it's not the router that causes the trouble. Make sure you're using only 10 Mbit Ethernet, not 100 Mbit.

I'm using 100 Mbit with no problem.
The hub is a dual 10/100 inexpensive Linksys while the ISDN router is Netgear

BTW the multi mode (packet) controller hooks from the HF and dual band (VHF/UHF) rigs right into the serial port on the closest computer. One of those without a cover.

The computers are 1.2 Gig Athlon (100 MHz FSB X 2) I got mine a week before they came out with the 133 X 2. which is the one used for packet.

The second is a 1.333 Gig Athlon (133 MHz X2 FSB) (both use MSI motherboards with RAID -- K7T266 Pro and K7T Turbo) The third is an old 450 P-III (Slot 1), but I don't remember the MB manufacturer. It's used mainly as a backup storage machine, but unfortunately as I'm well past a quarter terabyte on the other two, so it only gets the data files. (It can serve as a backup for an internet connection if need be. All three run 24 X 7.
I put the covers back on the two Athlons this past week, but they have been without covers well before upgrading to the Athlons.
>
> I have problems the other way, also. Transmitted RF (100 W)

I'm running the legal limit and have not noticed any problems yet and I've done a lot of checking. It will be interesting to see how the systems get along when I install the shop computer. That will take an ethernet run of roughly 175 feet which will be right beside the feedlines to the tower and directly under the 75 meter sloper and between two 40 meter slopers..

I do have an elaborate ground system with 21, 8' ground rods and nigh onto 360 feet of bare #2 copper that connects the all the station equipment, the tower, and house electrical ground into a common point. Got bit a couple of times befor hooking in the electrical ground.

On "average" the system gets hit twice a summer, but we escaped even a close one last summer.

> gets into my LAN and causes "interesting" effects. Ferrite
> has tamed it for the moment, but I don't know about QRO. Next
> step is fiber optics and/or 2.4 GHz wireless "WiFi".
>

Now I am concerned about the wireless...Particularly as I run 440 and will be going high power on both 144 and 440...course high power is a relative thing on those bands. I'm limited to 400 watts to the antennas (stacked 12s at 127 feet) due to exposure limits. 440 is actually a higher power limit, but the odds of me running more than a couple of hundred watts with an antenna mounted amp are pretty remote.

> ** Has anyone written up how to deal with DSL & LANs vs ham
> radio? **
>

Not that I know of. It's such an individual thing. I would bet that some one will soon though. People say the number one rule is to keep the covers on...It's difficult to do when constantly modifying the computers and I have to open them up and do a complete clean out every month, or two. Two at the very latest. They run so much air through that they do a great job of collecting "dust bunnies". This one gave an over temp alarm last week. I opened it up to fine that the bottom of the CPU heatsink looked like it had a layer of felt across it. (it's one of those that look like a mineature radiator with copper and aluminum fins.) If I increased the air flow any more, I think it'd be able to hover. In other words, it's gettin' noisy in here. And I can't shut the door or the equipment will overheat. (It's not much fun in here when it gets that hot either. How hot? room temp will go well above 30C. I'm changing out the old towers for new ones meant for the increased airflow for the new high speed chips. Along with that I'm going to

300-400 watt power supplies from the original 250s. With as many 8 to 10 drives they run lots cooler than the over worked smaller ones.

How do I get 8 drives? four in the RAID, two HDs on the EIDE buss and two CD drives on an EIDE buss. PCI cards are available for about $30 that will let you add 4 more in a RAID, or just EIDE ATA 100. I had standardized on 40 Gig ATA 100s, but I can now get 80 Gig ATA 133s for less than two 40s. All are 7200 RPM.
Six 40s on one machine is 240 Gig and two machines total nearly half a Terabyte.
Archiving data sure takes a lot of CDs. <:-)) (I do a lot of image work and am getting darn tired of scanning)

I have recently decided to take the plunge and investigate PSK31 with my trusty TS120 and P200 PC. I intend to use Digipan 1.6. So far so good on rx.

I note that "some transceivers cannot handle the duty cycle of PSK31 without overheating" and that the power should be reduced until the transceiver is running at the recommended power output for continuous-duty operation.

Does this mean that I have to actually adjust my RF output by say 50% of the normal. My understanding of the documentation that comes with Digipan is that I can do this by adjusting the CONFIGURE/TRANSMITTER DRIVE tab on the Digpan menu ? Is this correct ?

If any of you PSK31 experts out there could help I would be very grateful.

Thank You.

Yes, you can leave the RF power out at full on the radio and
just use less audio output by adjusting the transmitter drive
in Digipan.

You don't need a full 100W for DX PSK31 contacts generally
and certainly don't need a linear.

There are two main reasons to run your transmitter at reduced power output on PSK31. One of them is that your transmitter and/or power supply may not be able to handle the heavy duty cycle (as compared to SSB or CW) of PSK31. The other is that the transmitter will generally put out a much cleaner signal at lower power levels. Since the PSK31 signal is so narrow (and because most everyone is looking at your signal with a waterfall display) small amounts of distortion that wouldn't be detected in SSB will be quite recongnizable with PSK31.

Run your power control on the transmitter full open and then reduce the power by reducing the audio level from the sound card.

Want to get set up with APRS but unable to locate anyone that can help.
Sent over 15 emails and not ONE reply.

Have the hardware and software but now what?

Go to www.tapr.org. There is all kinds of help there including links to
other sites.
You'll be able to see the wiring hookup for you radio as well.

Filtered PSK like PSK31 has quite a low average power compared to the
peak power level
(like speech if not compressed with a speech processor). So the power
reading
of the TRX should be a lot lower than maximum, otherwise the PSK signal
gets distorted and
is by no means a narrow signal anymore!

If you are not typing (i.e. transmitting idles) then the average power
is 50% of peak. When you type the average power increases.

there are now nearly 300 repeaters around the world connected by the
internet through the internet radio linking project 24hours per day 7
days a week

perhaps one all repeaters in the world will be linked via the internet

to call a repeater on the system you just dial a 4 digit dtmf code

for a full list and more info go to http://www.qsl.net/g3zhi

the most remote repeater on the system is on antarctica

Did you try the TAPR APRRSIG mailing list?

>Can't even get a reply from the TinyTackII vendor.

That's surprising, but I guess it depends on what you asked. The
TinyTrack is a device that probably requires a reasonable knowledge of
APRS in order to use it.

I am not sure what "filtered PSK" is, but when a properly adjusted PSK31 transmitter is in idle mode - no keyboard activity - it is transmitting a classic two-tone SSB signal. As such, the average power is one-half the peak power. If the peak power is set at the maximum keydown power output of the transmitter, then in idle the PSK31 signal represents a duty cycle of 50%.

This goes up to around 70% to 80% when keyboard activity ensues and character codes are being transmitted.

One convenient check on signal quality, if you don't have access to a scope to monitor the r-f output envelope of the two-tone signal to check for symmetry and clipping, etc., is to measure the keydown or tune power output of the transmitter with an average-reading wattmeter, and then change to an idle condition. The meter reading should drop to one-half its previous value.

If you have a peak-reading wattmeter, the test is even easier. Set the meter to read PEP and let the idle run for a few seconds until the meter reading settles down. Then switch the meter to read average power, and it should drop in half.

This is a very sensitive test for clipping and overdrive distortion that Peter Martinez mentioned in the help notes of his first program release.

Note that I do not advocate running the transmitter at its maximum limits. Most will present unacceptable third and fifth intermodulation products when driven that hard. As an example, my Icom IC-756 PRO puts out exactly 100 watts key down on 20 meters. I find that by operating with a 40 watt

PEP that I can get IMD readings of -30 db or better. At 100 watts PEP, the
IMD is no better than -20 db.

Then you (or someone else) probably already destroyed it by editing using a word processor... or it is linefeed-separated, something that notepad does not understand. Try "wordpad" instead.

About using TAB: beware that some text editors don't support tabs and "help" the user by expanding them using spaces. Of course this destroys the file. It may well be that Notepad does that.

Boy, I disagree with that statement completely. Good, quality programmers document their code completely and properly. Code that is not documented because useless rather quickly since no one else can figure out how to maintain/enhance. However, this is user documentation that I am referring to. With the license fee they charge for that program, I would expect proper and complete user documentation. Since I am not selling the program and making money off it, I sure as heck am not going to spend the time to write user documentation. But then again, maybe some other kind soul has. That's what the original question was.

However, it is no longer that important anymore. I really use UI-View which is an excellent program and the author charges a very reasonable fee for his work. I no longer need the doc for WinAPRS since I found a more user friendly program with UI-View.

Cheers,

Duffy

Only if they are Shriners, et al like yourself. In 30 years managing
military systems development programs I seldom found good SW
documentation. Each/every programmer thot his/her documentation was
great but users and QA/CM always thot the opposite.

> ....  Since I am not

Why expect anyone else to be more helpful than you are willing to be?
Besides, if the SW was as good as you once said you could have sold the
wonderful doc.s I suggested ... ;o)

I have an original PK-232, non-MBX, with Dec.88 release software. I want to put it in kiss mode and I have a question. The manual says that you to give several commands ending with
kiss on
host on
However, after the kiss on command the 232 does give a command prompt again. So, how does it get the host on command?
I am trying to get ax.25 working under Linux and want to know if the 232 is actually in kiss mode.

I would strongly advise against that. The KISS mode in that software is
buggy. When you are on a busy channel it will send corrupted packets.

Get software for the MBX version (late '89 if I remember well), or later.

I think the first MBX version also had the KISS bug.
(Spent some time working with 'em about that bug.)

For certain it is all ok in later versions, beyond the very first MBX release.

I am sorry, I should have noted more exceptions to my statement. Government
programmers, like most government employees, do not necessarily do a good job and
therefore may not properly document the code
that they write. I would agree with your statements.

My friend in Nicaragua is trying to use the AirMail program. It
requires him to enter his call sign and select a packet server from a
list. When he connects, it automatically downloads and uploads mail.
Neither of us is sure where the mail comes from or where it's going. Is
it possible to send email from the Internet to someone on a packet
network? If so, what email address would correspond to his call sign?
If the answers depend on the program he is using, does anyone know where
to get specific information about the AirMail program?

There is only one way to get good documentation:
someone other than the author(s) of the code must write it.

(General observation after 30 years programming and managing programmers.)

www.google.com
Enter "Airmail" into the search box.

It somewhat depends on which provider he uses,
but the google search will show you all the different providers.

Nothing much to do with ham radio, Airmail is a commercial service.

What?

Airmail is the user program for the Winlink2000 network.
Definitely amateur radio. And you can send NTS messages via packet
from Airmail.

Yes, that could be.  What I am sure of is that there is no non-MBX version
that works correctly in KISS.  To fix the KISS problem you had to order an
MBX upgrade.

Did you try the google search?

"AirMail is a radio mail program for sending and receiving messages
via Pactor over HF radio, either via the ham radio system or participating
marine and commercial services. "

(Note the "either" above).

The original post did not specify ham radio, just "airmail".

Mostly that term means one or another of the commercial
providers of HF based internet email access. The google
search will show up links to both the commercial and ham

radio versions of the service. I stand by my point about
it's use in ham radio. The main use is clearly commercial.

You can also search on:
   SailMail
   MaineNet
   BushMail
   Saildocs
for more information about the commercial services involved.

>

In theory there can exist a "Friction Free Surface" . I worked for AT&T Network Services back a few years ago, and found this not to be the case. The source code in-line comments were quickly written in shorthand not comprehendable by all who read them. Also the documentation he refered to was the User Guide for which this item is usually an after thought. Generally, no matter how educated people cannot seem to place their ideas on paper or in an e-document without leaving important details out, this is why they need third party review for content.

This is my 2 cents of dribble for this century on this topic.

A common misunderstanding is that comments and/or code documentation can
tell a new (beginning) programmer how a complex software system works and
can enable him to make changes in it. This is generally not the case.

Software systems often are complex enough to require an amount of insight,
not merely knowledge of a number of facts. The latter can be communicated
in documentation, but the insight is more difficult to communicate that
way.

Rob

For those of us who have been in the industry for 20 years or so, I
think the main function of code documentation/comments is to remind us
of how our own programs work if we don't look at them for a week or two!

I'm not sure whether the ability to clear a program out of my brain is
an acquired skill or an acquired affliction...

User documentation is often best done by a third party in cooperation with the programmer. This is because the programmer is so familiar with the software that he often makes incorrect assumptions about how much the user's know about the product (or even computers in general). Something that appears to be "common sense" to the programmer may leave the user without a clue.

Some years ago there was a DOS program that monitored the packet cluster (unconnected) and displayed the spots. Any one know of a Windows program that works that way?

Programmers Rule #5:
You don't ever comment code. If code was hard to write, it should be
hard to understand, and even harder to modify.
:-)

Also, search google on airmail AND k4cjx and you will get the appropriate information and links. It appears that some commercial enterprise is now using the name "airmail" for its service, which confuses. Jim Corenmen, KE6RK, wrote the ham freeware you will need (Airmail2000).

I have been using the Winlink system for several years now when I am on the road in the camper and the email system works very well as long as you are within range of a base station and can connect. There are perhaps a couple dozen base stations, worldwide.

It is VERY popular with ham sailers at sea. There used to be an email list for it, but that went kaput.

You will address messages to your friends using their conventional email addresses, and they will just reply to your Winlink address, which will start with your callsign.

Winlink is NOT a "packet" network. It uses PACTOR, and data transfer takes place slowly (100 or 200 baud, but usually there is some compression, which helps).

What is the thinking behind programs that leave a TNC in a proprietary host mode when the user exists the program? For instance, PakRatt does it and PacTerm does it. I know both programs have an option to return to terminal mode before exiting, but wouldn't it be more user friendly to make that the default?

Is there a good reason, that I'm missing, for defaulting to leaving the TNC in host mode? (Other than to make it difficult to use with other applications that don't use host mode! ;-)

proprietary
> host mode when the user exists the program?

That's the problem, not thinking :-) It does get rather difficult to know how to leave the TNC when a program exits because it is often difficult to quickly find out how it was set before the software reconfigures it. Some programs have a file that plays a macro just prior to exiting - allowing you to customize how you would like the TNC set after exit.

Ken,

PakRatt was never designed for Windows NT/2000/XP. We also discontinued
sales and support of it in June, 2001.
```

You can upgrade to the 32 bit Pkterm for only $50.00 from PakRatt, and it will work under 32 and 64 bit versions of Windows and you wont run into the issues you're having with PakRatt under the NT techonology.

Rick - W4PC

I have looked at it as well. But for the life of me I cannot see just what it does. I thought it decoded some APT stuff but after looking it over I think it just looks at the signal and tells you if you in the middle of it.

Maybe I am missing something as well..

I have used it now almost for a year from the earliest versions.
During last months I have noticed that there have been several very positive articles about skysweeper in major European shortwave magazines.
The basic idea of it is that it allows you to build with blocks receiver or transmitter architecture whatever you like (including multiple decoders, filters, mixers FFT displays etc.)

It also provides quite sophisticated "traditional" user interface for two way communication called 'Chat Box' including predefined macros etc.
I have several other programs too, and I have to say skysweeper decoders are top class and very easy to use (including this new ACARS).

It still misses SSTV and HELL transmission modes and radio control features and I hope those will be also included in some of the next releases.

But, that was my opinion. I think the best way is just to download it and test it's free modes (MFSK16 is still free I guess..)

Roger,

We got complants on both, returning it to terminal mode and leaving it in host mode.. so we just gave them the option and set the default to leave host on since that would be quicker for a host mode program to start.

Bob,

We do

Under File/Mode, if the user checks 'Return to terminal mode on exit' then when Pacterm/Pkterm/MCH exit, they put the TNC back in terminal mode.

Yes, I did think about this before I implimented it :)

Quicker? How long does it take to put a TNC into host mode? And why
would anyone complain that the TNC wasn't left in host mode?

If you saw this situation from the other side - supporting apps that
don't use host mode - you would realise what a pain in the backside your
default is!

Why dont you just write some code at your startup to see what mode the TNC is, like I did. I check to see if it's in terminal or host mode and set to host mode if it's in terminal mode. If it's in neither, it tries KISS mode, then newuser mode, then goes into host mode from there or errors out if it's in some wierd mode, or if there isn't any communication with the TNC.

If some other program leaves the TNC in KISS mode, or resets it to newuser mode, you're in the same boat.

You init code could check for all the above issues, then switch it to terminal mode when it finds out what mode the TNC is?

```

The other day I found that my sound recorder that is standered on Windows 98 was not working. I could bring it up and it would start recording but it showed that there was no voice being recorded. I check the sound card out and it is working just fine and the mic is ok too. The only thing I have found wrong is this: When I open my volume controls all the sliders for up and down volume for microphone, line in cd play, volume and so on work just fine but my RECORDING VOLUME CONTROL is frozen. The slider is in the middle of high and low but I can not move it up or down. Can someone help? Please!
"Thanks"

P.S I trying to work a software program for PSK31 "Ham Radio" and this is the main reason I need to fix the problem with RECORDING VOLUME CONTROL

From Live! point of view - no problem:

Record source should be "What you hear", volume should be 100%.
Play it back and leave program decode stuff. Loopback is 100% digital.

Program.... here I cannot help you. Sorry.

YOu don't just hook up a scope and tune in digital modes. One way to do it for rtty is to hook the vertical input to the space tone filter and the horizontal input to the mark filter. Depending on how sharp the filters are you will see anywhere from a near horizontal line to almost a circle when the mark tone is tuned in correct. Then as the tones shift to space you will see the same thing in the vertical plane. If the tones are alternating as the station is sending data then you will have a cross patern. There are other ways to do it and get other paterns but this is the easy way to do it.

I am trying to use my icom 2800h for psk31(digipan software). The 2800 has a packet port but do not know how the ptt pin is activated. I am not familiar with packet. Can anyone tell me if this port can be used for psk 31?

thanks
tom

Any good idea what the frequency of the interference is? Most laptops
use a dc-ac converter to power their fluorescent backlighting. I would
suspect that to be the source of your interference.

The simple solution would be to move it away from the xcvr; otherwise,
you might try using aluminum tape to cover the entire display (except
the screen, of course) to try to rf shield it. Might reduce the noise
output...

Jim

I have a RF problem, and was hoping someone out there could give me
some input. I have apair of Linx KH series transmitter/receiver that have
a built in encoder/decoder. I am trying to transfer a small amount of

data (about 300bits/sec). I also have the evaluation boards, so I know there is no problem with the RF board construction. Both the evaluation boards are working, as both the preinstalled LED and buzzer work well, and I have connected a temporary switch/LED to each input/output, they all are working correctly. The problem is that when I try connecting the output of the receiver to my parallel port (or to a logic analyzer), it only seems to be outputting a single bit. So basically I am not seeing the rise/fall of the voltage level that I am inputting. I know the problem doesn't lie in the data collector, as I can directly connect it to my parallel port or to a logic analyzer and see the 0/1 bits I expect.

Can somebody out there give me a hint of what I need to do? Thanks in advance for any pointers you can give me.

as a newbie to psk31, i've got a bunch of questions, but i'll start with
just one....

i have WinPsk2.11 set up on my P166 and a cable from soundcard to speaker
output of my radio... regardless of signal strength shown on my S-meter or
on the waterfall display, most of the signals print as gibberish...
alternating caps and lowercase, odd characters, etc...too many errors to
blame on poor typing by the sender...

is this just weak signal problems, or does it indicate another problem with
computer, software, tuning, whatever???

thanks................   bob   wb2aiu

The Holtek style encoder/decoders used on the Linx KH are designed to transfer individual (single bit) logic states, not serial data or parallel words. You can transfer up to 8 separate states, but one at a time, not as parallel bytes. If you transfer a serial stream the data rate needs to be down at about 10 bps. Sorry about that.

Gerry

It sounds like a possible program with the date coding (DA
command). According to the command string you are showing it is
set to 2010 . The command is YYMMDDHHMM. Try setting your
computer to 1999 and see if you get the same problem.

I remeber that I had to change the coding in my software at Y2K for
a similiar problem. This would require an upgrade to the program.

Aha! Interesting! Yes, I know there is a problem with this program
with Y2K and they DID offer a patched program fix for it! However I
didn't not know about that until suddenly, a while after the Y2K rollover,
they refused to furnish the corrected program any longer! I talked to
the corporate entity which bought the rights to the AEA code at HAMCOM
in Dallas, explaining that I had no access to WIN-whatever and wouldn't
be able to use the totally new program at all.

Was told, more or less, 'Sorry, you are out of luck because we want to sell
new programs and the only way we can get people to leave the old one is not
to sell any more of it or we can't financially recover from the losses we
took with AEA.'

Gloom ..

Essentially, then what they did was to provide the commonly used sliding
date rollover 'fix' for the code which creates a year-window deal from
1980 through 2079 to fix this deal. Anyone have any suggestions as to
the patch code or what to do.

WIN-whatever is *NOT* and option of any kind in a remote non-attended site
that takes about 40 miles of driving to access...

    and PHS isn't feature rich, but it does exist in a later PK-900
    version for native OS/2 ...

Thanks

--> Sleep well; OS/2's still awake! ;)

I am monitoring the OPP (Ontario Provincial Police) They have 9 different towers with an abc in each division so itd would go 1a 1b 1c, 2a 2b 2c and so on and every tower has a mobile and a base frequency or a frequency and a mobile where the frequency being the tower. ex. 1a mobile 139.470 1a base 141.390 1b 139.185 1b base 141.195 and so on.... and it says that all opp frequencies use CTCSS PL-TONE 107.2 Hz. Set your CTCSS tone to this to get rid of the computer generated squawking.... but its seems to be not working , i have a BC 245 xlt radio and i can pick up there mobile repeaters but i have a hard time getting rid of the squawking.. so could a OPP fellow monitor or someone who knows what im talking about please help me.... I have the winscan software and its has a spot where i can set the pl tone to anything i want os this apply to my scanner,, i am assuming so... so please help

It's one of the correct newsgroups.  However, may I suggest beaconing every 15
minutes or less often if there's any activity on the frequency at all (besides
your station).

The DX-Summit spot database search shows 25 PSK spots on 6m during the
last month.
http://oh2w.kolumbus.com/dxs/qin.html

The only PSK signal I've heard was DU1EGA a couple of weeks ago.
Unfortunately I was not able to transmit (I use Digipan mainly for
monitoring the TV channel carriers) so no QSO.

Try the MixW software by Nick UT2UZ, available from
http://tav.kiev.ua/~nick/mixw2/ . It will decode most of the modern digi
modes. To familiarize with the different sounds, put MixW in TX mode (if
transceiver is connected, prevent it from actually transmitting) and listen
to the sounds coming out of the PC speaker.

So I've got this fance Icom IC-756Pro and I want to see the RTTY
decoder work. Where can I tune to be likily to hear RTTY?

What mark and shift do I specify?

BTW, I'm in Maryland USA.

Thanks,
John

Look for the ARRL rtty broadcast on 40 meters and 20 meters . Don't recall the ecect frequency but shuld be around 7.095 and 14.095. They send at specific times every day. Look at arrl.org to find the exect frequency and times . Most ham rtty is from 14.080 to 14.100 on 20 meters.

Set the receiver for lsb, the program for 60 wpm (or if in bauds 45.45 or as close to it as possiable in the program). Mark tone can be set to most anything but set it to 2125 and space to 2295. That is 170 hz shift.

No, set the PRO's mode to RTTY if you want to copy using the built in decoder.

Hi Folks:

I just looked through some old posts for what looks to be an old problem. I can't find any answers.

On an HT (VHF mode) everything seemed to be working fine. I set up the HF rig to monitor some APRS on 10.151. I got it tuned up and was monitoring packets with 'V'. I see a lot of traffic with the APRS texts.. Heard (H) isn't catching anyone, although I can view calls in the packets. Nothing on the map <space> is showing symbols. I thought it was a linefeed problem, a time and date stamp problem. I changed them, still doesn't work.

Now, it doesn't work on VHF either, but I do see the packets with 'V', a few stations with 'H' and only one symbol, a car, on the map, on 144.39 which is runnning >130% most times! I did J A, that doesn't help. Again, I see LOTS of traffic with 'V'.

I'd love to buy this program, if it's still available, if that's what the problem is. (time-out period?) If it's bugs, I'm not so sure..

Any help appreciated!
Take Care!

Hi Ed:

Have you tried "Stream"? This very cool program tranceives PSK31, MFSK8 and 16, and PSK63F and 125F. There is one mode I think called "piccolo" or something like that, the PSK31 works mostly on. I have been hearing something like extremely wide (at least 3kc) and fast RTTY. The FAST CW might be HELL of some sort. I think there are alot of different HELLs. Wow, now I don't know! Might be anything!
Take CAre!

Hi:
I have a PK232MBX. If you have "PACRAT", there is a signal identification mode (SI). You just select WIDE or NARROW, tune the radio for the proper tone, and it does the rest. When it comes up with good parameters, just press <enter> and it goes to that mode, setting the speed and everything!

Hi Tim!
I like to use W95SSTV. It uses alot of DRAG and DROP, auto start AND auto save, picture editing (putting in your call,etc.) I've registered and used JVFAX in the past, but find it buggy on this Gateway 650..
Take Care!

Any frequencies in particular? I was wondering if the PSK gang
has claimed any particular frequency, similar to PSK-31 use on the
HF bands.

I just subscribed to find the same for my Jornada 680.

I have used the DX cluster with the standard built-in WinCE terminal
software with a PK12 and I believe there is some free commercial
software from pakratt - http://www.cssincorp.com/pakrattce

I've found a satellite tracker called pTrack which works fine -
http://homepage.ntlworld.com/c.d.jackson/ptrack/

I am going to try and write some sort of simple log book program with Visual CE Lite.

I'd love to find some RTTY or SSTV software, just to give those modes a go, but web searches draw a blank.

Hi All;
I am looking for the add-on TNC kit for the PacComm Pactor Controller.
This unit was made in the early 90's and added packet capability to the HF
Pactor Controller which already worked for Amtor and RTTY!
Does anyone have one of these units sitting around?
My Controller already has the faceplate and switch for this mod.
PacComm, apparently, no longer support ANY of their Pactor products!
TIA

hi all,
i happen to have a pk here in the radio corner.
i dont have read much the owner manual i must say but i wonder if i could
use it has a gateway between hf and vhf .
here packet radio is falling a part ,like many places,nodes are closing ,and
i wonder with a radio/gateway i could  reach regions far a way to permit to
my ham community to have fun

let me know your friendly piece of advise about it.

Hi Klaus,

Many thanks for that, I found the software OK and it seem to work fine!
Do you know if it is suitable for SSB use, or is it better used on FM
rigs?

Regards,

Of course chatting via APRS is *extremely inefficient* in an environment
like that.

Hi:

Do you have a PK232? This one has a manual button to switch to 2 different radios. I'm sure there are other TNCs that can do this automatically.. eBay probably has them!

Have you tried listening to 144.390? That's a super-loaded APRS freq this way. Most messages go around unproto (round table). If nothing is there, you might try 10.151 LSB.. This is HF APRS..
Here's something fun to look at! http://www.findu.com . Alot of good APRS tracking stuff..
Take Care!
Harry KB2MEN

It's axiomatic in the SW industry: the better the programmer the worse
his/her documentation. Sorry, can't help. Maybe you could figure it out
and write a user-oriented manual ... ??? ;o)
cheers

Think about the maths

If each digi manages to pass 70% of its traffic correctly and you have 4 of them in your link then the chance of a single packet getting across all 4 of them is

.7 x .7 x .7 x .7 = .24 = less than a quarter make it.

Something to be said for connected mode...

Actually, the best use I found for it was to communicate while several people are DFing a lid on the repeaters; you only have to give your bearing, since everybody can see your position, and the odds that the bozo will be able to receive your comms are pretty low.

The software cost $249.00...a bit much for a map program.

Amateur Radio Antennas Made By Amateur Radio Operators
Our Mission Is To Bring You Quality VHF / UHF Antennas
At A Great Price
we feature a complete line of ready to use J-Antennas. The
frequencies we stock and that are not considered
special order are 1.2 ghtz, 70 cm, 1.25 meters, 2 meters/70cm, 2
meters/1.25 meters/70cm tri-band, 6 meters, and
10 meters.
We will make an antenna for any frequency from 10 meters to 2.4
Gigahertz to fill any need.(What is considered a
special order antenna) they would be antennas for sound systems,
marine or aircraft frequencies, commercial FM
frequencies, cell phone frequencies, any antenna not listed as
standard stock ham band antennas !
Where you need a "J" antenna, we will
help!
We have sold over 9000 antennas to date !
AS SEEN IN WORLDRADIO !
STARTED MAKING ANTENNAS ABOUT 1994
THESE ANTENNAS HAVE BEEN USED FOR THE PAST 4 SUPERBOWLS, NBC
STUDIOS IN
HOLLYWOOD, ALSO CBS AND ABC...USED AT LAST YEARS MTV MUSIC AWARDS,
ALSO THE TV
SHOW , DAYS OF OUR LIVES , AND THE ROSEY O'DONELL
SHOW.
WE MAKE THE "J" TYPE ANTENNA IN COPPER, AND A ROLL UP STEALTH
VERSION, WILL CUSTOM
TUNE A "J" ANTENNA FOR ANY FREQUENCY FROM 10 METERS TO 1.2
GIG.....

1. Edit in with a plain text editor, e.g. Notepad, not with a word
processor that is going to put crap in it.

2. Read the comments in it about using tabs to separate the fields -
this bit:-

    ! ! ! Fields must be seperated by TAB ! ! !

I don't even use WinAPRS, but scanning the docs - the original subject
of criticism in this thread - was sufficient for me to find out how to
do it.

So in reply to this comment someone made "It's axiomatic in the SW
industry: the better the programmer the worse his/her documentation", I
would say - "It's axiomatic in the ham radio SW industry: no matter what
documentation you write, radio hams won't read it."

Thank you Roger for taking the time to help me.
I did read that in the docs about using the tab to separate the fields and I used notepad to edit it . It looks to me like the file aprserve.txt is some other format , it is mostly symbols , just a few words.
Thank you: Don

All,

I'm trying to figure out how to wire the interface cable for a Kenwood TM-G707A to MFJ 1270C connection. The wiring diagram on shown on Bux.com does not jive with the pin-outs in the Kenwood users manual, and not being an electronics guru I'm having trouble figuring it out. I've got the Kenwood mini-DIN PG-5A connector cable and the MFJ TNC connector cable/plug. If anyone has ever wired one and can help me I'd really appreciate it!

Thanks

Brian
W8BYH

YESS, Bob !!!

you have exactly captured the essence of my situation ...
now for the exact or more precise info ??

HOW can i construct a fixed frequency (MF band, 518 kHz) SSB receiver ????
I need only the part 1. of your problem description ... i can buy the FSK modem ...
i.e. WHERE can I find a circuit diagram that can be somehow converted to an SSB with 518 kHz reception ?

I have understood the AMTOR FEC system (7-unit FEC) and i can decode it, but i need the SSB ??

It is just the RF part that i don't understand ... just the SSB receiver, the rest is now fine.

Thank you very much for your input

Martin Vejmelka

Hello again,

Ok, Martin, what I can see, many letters on this question. So if you decide to built this navtex receiver, a few informations from my side. I am using this system for last 10 years because I am a marine radio officer and this is part of my job.
1. consider active antenna system (preamplifier in antenna) or veeeery long antenna.
2. you live in Czech republic (far away from sea) and this navtex station are not so close for 518 khz
3. receiving navtex at sea is easy but ashore another story (qrn)
4. to test equipment you will need evening hours or night
5. there is a list of all navtex station (British Admiralty book volume.5 GMDSS)
6. the transmission is based on schedule for each station, so this is not continous transmission
7. you need a sensitive receiver so from this point of wiev direct conversion is easy to built but out of question for this project

Many things to say about this navtex, so if you stick with this project I will update informations in next few days

Adam

Dave,

I don't think you built a version of this circuit, since it goes *inside* the PK-232 and allows the sound card to be plugged into the back of the PK-232. It lets ALL the modes of the PK-232 (CW to Pactor) be controlled by software including PSK-31 from the sound card. This is not an external box like the Rigblaster or other sound card only units.

In other words, one program (i.e PkTerm) can go between all modes of the PK-232 and the sound card audio for PSK-31, and just use one physical connection to the radio from the PK-232 for all the modes. It also uses the PK-232 for keying the radio so you dont have to build a keying circuit. Saves you a bunch of wiring and a serial port!

Check out the details at http://www.timewave.com/PK232PSKupg.html

Rick - W4PC

Does anyone know when the PK-232 firmware first properly supported KISS?
Would firmware dated Feb 1988 (don't know the version number) support
KISS?

Be careful! Those days there was KISS software for the PK232 with a very serious bug! When the channel is busy, and the host software is sending packets (it cannot know the channel is busy...), the PK232 will overwrite some buffer and from then on, even while the channel is clear, it will only transmit garbage instead of the transmitted data.
(actually, it will transmit the data but the packet boundaries are shifted)

This was fixed in the version of the firmware that included the mailbox. AEA refused to backport the fix into the older firmware, and charged an upgrade fee for the "new functionality of the MBX" even to users that only wanted to fix the KISS mode in their PK232.

So, to know if a PK232 properly supports KISS, check if it has the mailbox.
I believe this was added late 1989.

Rob

Hi, I was Paul Supervisor for his Navtex decoder. He (like you perhaps) concentrated on the software and left the radio bit till the end. I may run another student through it next year.

We had intended to use a TAYLOE mixer and direct conversion with passive audio filters followed by opamps (which would have some active filtering.) You'll get info on Tayloe mixers on the web (and here) You might just make it within 15 parts!

Our idea was to decode the FSK using a PIC and have it generate pure RS232. You can use zero crossings and do all the decoding in software, see the HAMCOMM interface (web)

Here in the UK, or at least here in Northern Ireland, there is considerable interference to 518Khz, there are some loud stations within 5 KHz or so and care is needed to get good reception.

You will have a BIG problem getting good signals where you live, the suggestion for an active antenna is a good one. Actually there might be other Navtex transmitters near you, to the southeast or baltic.

The aerial needs attention as wel mind you. A receiving loop gives directional advantages... no good on a boat of course!

Bythe way there is now a second Navtex transmission on 522 kHz (AFAIK), its weather infomation is more detailed than the shipping forecast on 518.

You can tinker with navtex using any SSB receiver and a HAMCOMM interface and software, this will be a good start, if you can borrow a SSB receiver.

I'lbe happy to answer your emails... provided you release your design into the public domain. mailto: IJ.MCCRUMatULSTdotACdotUK

Subject: Explain APRS's Attraction?

Hello. Don't get me wrong, I want to like APRS, I really do. Let me tell you what I've done so far. I've set up a separate rig, and TNC, I've got my antenna up high enough where I'm seeing a lot of APRS stations. They come up on the screen, both mobiles and fixed stations. And that's it. I know, what did I expect? Don't know really. There just seems to be absolutely no communications. Even the TNC's aren't really talking all that much. It's just unconnected packets shouting out their positions. Maybe I'm missing something. I've got to be, because I understand how popular APRS is. Is there some messaging or keyboard to keyboard communication going on in the background?
Please understand, I want to join in the fun, I just need some help!
Thanks

I'm working on a simple radio link between 2 pcs interfacing each one
to a ppi chip on an ISA card slotted in the other.
I use frequency shift keying for modulating bits (fh ,Fl).
1) Do I need other frequencies to send and recieve strope and
acknowledge signals.?
2) How to synchronize clock of the clock of the bit sending rate and
the bit recieving ICs.
3) How can I choose apropriate freqs of modulation   (Fh, Fl)

4) Any other tips or link to useful sites would be appreciated
Thanks.

It's about remote telemetry.

Supposedly, there is also a small, one-line message transport system in the protocol as well.

That's about all I know about it. I don't use it.

What is a ppi chip?  A parallel port interface chip?

That is not the kind of chip you would normally use for this purpose.
Instead, use a serial port interface chip.  That will solve problems
number 1 and 2 for you.

For problem number 3: as a rule of thumb, use freqs whose difference
is about 1/2 to 1 times your bitrate.  E.g. for 1200 bps use 1200 and
2200 Hz.  Or 1200 and 2400 for a simpler circuit.

For problem number 4, use www.google.com

Rob

For starters, take a look at all 118 pages of:

ftp://ftp.tapr.org/aprssig/aprsspec/spec/aprs101/APRS101.pdf

This is the full specification of APRS, including details of position reporting, position tracking and forecasting, message handling, general-purpose telemetry, weather station reporting, Internet tunneling, direction finding, storm warnings, display objects, text bulletins.

That's what APRS is about.

APRS isn't made for chatting. Try PSK31 for that. The fun in APRS is watching the space shuttle orbit the globe, watching a balloon attempt an around the world trip, watching sailboats around the caribbean, marathons, weather stations, road rallies, truckers, etc. If you just want to see maps and locations you can do that over the 'net with just a computer. For more fun take your APRS setup mobile and let everyone else see you as you travel.

Actually, APRS for chatting is kinda cool, I've done it several times
with a TM-D700 while mobile and it was remarkably good.

Hi,

I have a question. What is the theoretical maximum bitrate I can
achieve using GMSK modulation on a 12.5kHz VHF channel?

Thanks in advance,
Roland

Can't really answer that unless you first decide... What are your proposed
values for "M" and Signal to Noise Ratio?

I just picked up an apparently working K100-D logic analyzer without
any manuals/pods/wires. Does anyone have any of these they would be
willing to sell/trade? A copy of a manual would be fine.

Thanks,

MR

Hi there,

does anyone know where I can download jingles from 95,8 Capital FM's radio
station? Would be great if you could quickly let me know at
muenchen23@talknet.de

Many thanks !!!

I picked up a box of Ham radio gear at a estate sale (old friend), felt sorry for the widow, you know.

I'm not a Ham but thinking about it some since I was a kid.

Anyway what I got was a AEA CP-1 set up for a Commodore 64 and a Heathkit HD3006 Crossfire Scope.

Now I know technology has advanced and the Commodore has been replaced with PCs..

Do I have anything here worth messing around with if I just want to DX CW and RTTY. I did a Google on the CP-1 and no one has discussed it since 1997. It seems to use it with a PC, I have to do so some wiring tricks with the RS232 cable coming out of the CP-1 and I need some software.

Does anyone have any recommendation on public domain software and the wiring changes for the RS232 cable.

Or should I just salvage the cables and start thinking about Pactor (someday).

Thanks

Steve

The cp-1 was just a demodulator unit. The output was just a simple conversion of the audio tones to whatever the Commodore used or some versions had a rs-232 connector that could be plugged into a computer serial port and would put out a + and - voltage as the tones changed from mark to space. If you have the serial port installed in the cp-1 then you may be in good shape. All you need to do is find some old softwear to use it. It may take a long time to find any as most of it was written for old DOS computers. If the cp-1 does not have the serial interface for the IBM/MSDOS type computers it may be some problem to make it work unless you can find a schematic of the cp-1 and install the parts .

YOu may be beter off going here:

http://www.muenster.de/%7Ewelp/sb.htm

and looking at some of the sound card programs. The one called
something like mmtty is very good for rtty.

Thanks Ralph, I have the manual and the schematic for the CP-1 and you are correct about the optional RS-232 port on the CP-1. The it takes a couple common chips and the connector to bring the unit up to RS-232 capability. I could easily do that upgrade if I find this old unit worth while at all.

I guess I'm an "ole sucker" for obsolete technology. I hate to throw it away. I'm almost tempted to dig up an old Commadore 64 just so I can play with it. At least I have the software cartriges for that computer. (Just kidding.)

If anyone knows of a DOS or Windows shareware (freeware) that is still available for this equipment I would appreciate it.

Thanks

Steve

I think that your first problem is that you need to get an amateur radio license before you hook the thing up to a radio.

Steve,

First, you do not need an amateur radio license to hook anything up to a radio, but you need one to transmit. Go ahead an listen all you want. Second, if you are
talking about software to run an old TU, you should think twice about whether you simply want to see the old box run, or whether you want to copy RTTY and/or PSK31, and/or other modes. For the first two, if you have a PC with a sound card, free software is all you need.

Try here for Zakanaka (PSK and RTTY, using the MMTTY engine) and also Logger:

http://www.qsl.net/kc4elo/main.htm

Or here for MMTTY (RTTY) and also MMSSTV:

http://www.qsl.net/mmhamsoft/

Everything you find at these web sites (Logger included) is free, meaning you CANNOT pay any money. Once you have the PC, and tones coming out of a radio speaker, your cost to listen is the cost of a pair of wires from the audio output of your radio to the mic or line input of the sound card.

It seems to me that if you want to use the CP-1 for the sake of nostalgia, you should leave it unmodified and find a Commodore into which to plug it.

Your next step should be to drop by Radio Shack and pick up a copy of "Now You're Talking," and we'll see you on the air soon.

73,

Jan, KX2A

Is there anyone out there who uses a Maplin TU1000 Terminal unit for RTTY tx and Rx?
If so, which software do you use, and what mods have you made - PTT line for instance.
I used to use the TU for monitoring RTTY when I was working in the Middle East and found it to be very sensitive, but I now have a licence and would like to use it to get on the air.
Any help or advice most welcome.

thanks
Patrick Nairne

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH6O, jeffreyh@hawaii.edu, or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any amateur radio-related message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis- trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is NOT the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas. PLEASE BE SURE TO SAVE THE WELCOME MESSAGE YOU RECEIVE AFTER SUBSCRIBING -- IT WILL CONTAIN IMPORTANT INFO REGARDING UNSUBSCRIBING!

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send an email to cq-contesting-request@contesting.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent. This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists   to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

For information on the CP-1, see
http://www.angelfire.com/fl3/technicothica/cp1.html

It is a great site dedicated to the CP-1 and CP-100. Lots of great mods and links for software!

Yes, with some FREEWARE, you can even use your CP-1 for PACTOR!!

Rob

Hello,

I am in need of some help.....
I have an SMC 2520 Band 3 radio and I am looking to convert it.
Has any one done this with one before ?
if so what did you do and on to which band ?
Also has any one got a manual / circuit details and or an
address for Argyle communications whom I believe had some thing
to do with the design / programming of the rig..

Ta.
Martin

Hi all,

This email is to advise all users of an imminent price increase for ACARS Log Analyser for Windows.

We have maintained the low price of �17.50 for a number of months now, but due to the time required to maintain and improve the program, it is necessary to revert to the original price of �29.99.

The current offer price of �17.50 will expire after the 21st November, 2001, so if you register at this price, please do so before the 21st.

The price increase will allow us to continue development of the program and continue to add the numerous user requests that we have received.

Current planned features are:

* DDE support from all existing decoders
* WACARS support
* Route plotting

Thanks to everyone who has so far registered and rest assured that your support will ensure the continued development of the program.

Thanks,

Mark Avey

What are the difference between digital broadcasts (DAB) in different countries?

And consequently: Should a radio from country A work fine in country B?

Example:

VideoLogic sells an 'UK' model DRX-601E/ES for _a lot_ cheaper than their 'European' model DRX-602ES.

The UK version of the radio band III (whatever that is) and in many countries DAB broadcasts seem to come in band III.

So, if the country to which you'd take the UK radio broadcasts in band III, shouldn't this UK model work fine there, too? (As for example in Finland and Sweden -- but NOT in France, where they have this other frequency area.)

-Sure, some accented characters might not show in the lcd-display of the UK-version set, but the sound should be ok, as long as both countries use this band III, no??

Or what do you think? Are there other things to consider before mail-ordering a DAB-radio from another country?

Please, do comment if you know anything!
I am sorry if this get to a newsgroup that does not deal solely in these matters, but it seems

very difficult to get any response let alone solid information anywhere.

Thanks for your time!

Followup-to set to "alt.radio.digital"

nn <lurex.zdne@nomail.com> wrote:
> What are the difference between digital
> broadcasts (DAB) in different countries?

None. The only difference are the frequencies being used.

According the ETSI-proposal, DAB can be used in 4 bands: Band I (TV channels 2 to 4), band II (current FM-band), band III (VHF) and L-band (1.4 Ghz).

IFAIK, band I nor band II are is use anywhere (there where some tests using a upper part of current FM-band in Poland, but they where stopped as it proved they interferred to much with FM-broadcasters in neighbouring areas).

Some countries only used band III (like the UK, Belgium, ...), other only band L (like France) while other use both (like Germany, which seams to do it 'by the book': national/regional content in band III, and local content in band L).

I propose you wait a little bit.

First, with the handing out of 9 DAB-licences for Paris by the end of this year (with some additional licences expect when the CEPT assign new frequency-space in the L-band for terrestial DAB); one can assume new (and cheaper) radios are on their way overthere too within the next half-year timespan).

In the end, it will be cheaper to produce a single model -that can do both band III and band L- then to have 'national' versions.

> Or what do you think? Are there other things to
> consider before mail-ordering a DAB-radio from
> another country?

Well, I ordered my digital sat-receiver via mailorder in Germany; as they are a lot cheaper overthere then here in Belgium.

The only issue I can think of, is what to do when the radio doesn't work; but
1/ In general, I do not concider this a real issue for things that do not have a lot of 'buttons' (like a FTA sat-receiver or a DAB-radio); but I WOULD consider this an issue when buying a complete PC).

2/ There is supposed to be a special service by the EU which can intervene in a conflict between an (ordinary) customer and a shop in another EU country, and also in-case of the mail-order purchase.

Cheerio! Kr. Bonne.

Hi all,

I wonder if any of you 570 owners have linked a minidisc player/recorder to aid in giving audio reports back ??? I have tried to attach it to the ACC2 port by using pins 3 & 4 for output to the MD (which works fine) and 11 & 12 for input from the MD. Now it's the output from the MD that seems to be the problem. Not really sure how to make it work. Any ideas ? Will the ACC2 take audio input or is it just for fsk type stuff ?

Thanks for any help

Jonathan

Does anyone have any idea how to pass an axip link through a linux iptables firewall? I have eth0 on the outside with a registered ip address and am using SNAT and DNAT to masquerade traffic to the inside network via eth1. Everything works fine except the axip links.

Any suggestions would be greatly appreciated. Please post your response here or send it to jcamp2@home.com or N0WJP@N0WJP.#ENE.NE.USA.NOAM.

73,
Jeff

AMATEUR RADIO NEWSLINE(tm) REPORT #1265 – NOV. 9, 2001

Amateur Radio Newsline report number 1265 with a release date of Friday, November 9th, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Ham radio leads the way at the New York City Marathon. This story is first on Amateur Radio Newsline report number 1265 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO AND SPORTS: - THE NEW YORK CITY MARATHON

Ham radio was once again at the start and finish -- and all along the route of this years 32nd running of the New York City Marathon. This years event was held Sunday November 4th and was dedicated to victims of September 11th terrorist attacks. Its theme -- “United We Run.”

The starting line was at the Staten Island Side of the Verrazano Narrows Bridge. According to Stew Seit, WA2JNF, who was assigned there, it was a moment of total patriotism:

--

WA2JNF: “On the bridge waiting for the cannon to go off, everyone began singing patriotic songs. It would brng a tear to your eye. There were 30,000 people singing. It was something to be seen.”

--

But Seit and almost 500 other hams were there to provide communications for the event. And according to WA2JNF, even though there were lots of cellular phones, it was ham radio that was the communications backbone once again:

--

WA2JNF: “Everyone was running around with digital radios, Nextel’s, cellular phones. But when the need came to get the message through they turned to us hams. Regardless of how many cell-phones or trunked radios they have tied around their necks, when the message was of priority nature, and they wanted to make sure it got through, they spoke to one of the hams who was

handling the communications and we got the message through”
--

The crowd lining the route was estimated at more than two million. Many were waving small American flags in memory of the thousands killed in the terrorist attacks.

ARRL Hudson Division Vice Director Steve Mendelsohn, W2ML, heads up the the ham radio communications for the Marathon. In fact, he has been organizing the ham radio effort ever since Amateur Radio became a part of the event many years ago. He says that for him, for the group of Amateur Radio volunteer communicators and for the people of the Big Apple, this years New York City Marathon was like none ever before:

--
W2ML: ”It was truly a celebration of life. It was a way of saying to the terrorists: ‘look -- we are going on with our lives. You didn’t stop us.
On the contrary, you united us.’ “
--

Tesfaye Jifar of Ethiopia set a record in winning the mens catagory. He ran the 26.2 mile course in 2 hours, 7 minutes, 43 seconds. The old record of 2 hours, 8 minutes and 1 second was set in 1989. And as Jifar broke the record it was a corps of ham radio operators that guided him -- and the 30,000 other competitors in the New York City Marathon -- to a safe completion of this years run.

More on the Marathon is on the web at www.nyrrc.org. Our complete interview with Steve Mendelsohn W2ML can be downloaded from our FTP page by clicking on the newscast number at the top of the www.arnewsline.org home page.
(ARNewsline(tm))

**

RADIO AND SPORTS: THE SANTA CLARITA MARATHON

Sunday November 4th also saw another Marathon where ham radio played an important role. This one took place in Amateur Radio Newslines’s own back yard. It was the Santa Clarita 5 K Marathon and featured ham radio as it primary communications. Take a listen:

--
Audio Here
--

About three dozen hams from the Los Angeles County Disaster Communications Service and the Santa Clarita Valley Amateur Radio Club provided this years communications support. Most of it was on two meter F-M using the 146.79 MHz W6JW club repeater.

--
Audio here
--

The Santa Clarita Marathon may take place in a Los Angeles suburb, but it is by no means a small event. Several thousand runners take part and its course is USA Track and Field certified. In fact, this event is a qualifying race for the famed Boston Marathon.

More information on the event is at www.scmarathon.org. The Santa Clarita Amateur Radio club’s home in cyberspace is www.w6jw.org. (ARNewsline(tm))

**

TECHNOLOGY AND RADIO RULES: FCC PUTS KENWOOD "SKY COMMAND" PETITION ON PUBLIC NOTICE

Turning to regulatory matters, the FCC has put a rulemaking petition from Kenwood Communications Corporation requesting that the government relax restrictions on Amateur Radio auxiliary station operation on public notice. Amateur Radio Newsline’s Bruce Tennant K6PZW has the details:

--

The FCC assigned the rulemaking number RM-10313 to the petition in which Kenwood asks the government to permit hams to use control methods like its own Sky Command radio remote system.

According to the ARRL Letter, Kenwood’s Sky Command lets a user control a fixed location High Frequency station using a pair of dual-band VHf/UHF transceivers on frequencies in the 70-cm and 2 meter bands. Kenwood wants a change in Part 97 rules that would expand permission to operate an auxiliary station on all 2-meter frequencies above 144.5 Mhz, except on 145.8 to 146.0 MHz.

And while not mentioning Sky Command by name, Kenwood says that the proposed rule change would allow the development and use by amateurs of new technology devices and increase the utility of the limited amateur allocations. Current FCC rules limit auxiliary operation to certain frequencies above 222.15 MHz.

In July 2000, the FCC declared that use of the Sky Command did not comply with Amateur Service rules--specifically Section 97.201(b). It also declined to grant a waiver make it legal. The ARRL commented in opposition to Kenwood's earlier efforts to have the system eclared to be in compliance, and it refused to permit Sky Command advertisements to be published in its QST magazine.

In its Petition for Rule Making, Kenwood asserts that auxiliary operation is poorly defined and significantly overregulated in the FCC rules. Kenwood also argues that present limitations on auxiliary operation no longer are appropriate in today's amateur environment and should be withdrawn.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW.

--

Again, the Commission has assigned the rulemaking number RM-10313 to the petition from Kenwood.   Those interested may view and comment on it via the

FCC's Electronic Comment Filing System. (ARRL)

**

BREAK 1

This is ham radio news coming to you from the United States of America. We are the Amateur Radio Newsline, heard on bulletin stations around the world, including the New Orleans VHF Amateur Radio Club Net on the W5MCC 146.85 repeater serving my home town -- New Orleans, Louisiana.

TECHNOLOGY AND RADIO RULES: DIGITAL WIRELINE REMOTE BASE OPERATION BEING TRIED IN THE UK

A British ham radio operator has been granted permission to experiment with a digital wireline multi-band remote-base system. The experimental station was made possible by combining a popular H-F transceiver, the support of the national ham radio society and a cooperative government regulatory agency. Jeramy Boot, G4NJH, reports from Nottingham in the U-K:

--

Dave Gould, G3UEG, has received a Notice of Variation as a Special Research Permit to set up an HF station that is remotely controlled over the telephone network. This has come after 16 months effort liaising with the RSGB Licensing Advisory Committee and the Radiocommunications Agency and has been finally approved after a site inspection. The system is based on a Kachina 505DSP transceiver and Kachina's own specially-designed remote control system. The audio is digitised and then multiplexed with the control signals. The resulting single data stream is encoded and then passed over the telephone network using standard modems. At the remote end the data is decoded and the audio is split from the control signals and passed to the transceiver. The system will operate at a line speed of 28K or better and includes strong security, failsafe and shut-down measures.

Jeramy Boot, G4NJH
--

While we in North America take wireline and radio remote-base operations for granted its new to many other parts of the world. Anyone interested in receiving further information or with ideas to assist Dave Gould, G3UEG, may contact him by e-mail at david.gould@btinternet.com (RSGB)

**

ATTACK ON AMERICA: COMANDO SOLO DOES NOT WANT RECEPTION REPORTS NOW

If you are an SWL or ham who listens to shortwave -- and -- if you are planning to send a confirmation card to Radio Solo, the word right now is -- dont! This as the United States forces 193rd Special Operations Wing asks that reception reports and cassette tapes of its Commando Solo flying radio station broadcasts over Afghanistan not mailed to them at this time.

According to the Media Network e-newsletter there are two reasons. Obviously, they are involved in operations over a theater of war and need to lessen their peripheral workload. Also, due to the Anthrax scare in the United States, the U.S. mail system is overloaded with new safety procedures. In other words, your report may be indefinitely delayed or never opened. (Media Network E-Newsletter)

**

ATTACK ON AMERICA: NYC TELEVISION SEEKS NEW HOME

Seven weeks after a terrorist attack caused the collapse of the World Trade Center, hundreds of thousands of homes in the New York City area remain unable to receive more than four television stations. Because the main antennas atop the north tower came down, all the local stations, except Channels 2 and 41, which had backup antennas on the Empire State Building, had lost a significant part of their audiences. The situation improved last week when two more of the stations that lost their main transmitters began broadcasting from the Empire State Building site. Amateur Radio Newsline’s Henry Feinberg has more:

--

On Thursday morninng, October 31st, Tribune-owned WPIX-TV channel 11 switched on a transmitter giving it an over-the-air signal said to be similar to what it was prior to the terrorist attacks. WNBC-TV channel 4 -- which in the late 1940’s was the first to broadcast from the Empire site -- made a triumphant return later the same day when it flipped the switch on its new Empire located transmitter.

As an interim step to get back on the air, most local broadcasters had opted to use the old Armstrong Tower located in Alpine New Jersey. But the Alpine tower is not high enough and is to far away from the majority of the New York City demographic audience to provide clear reception throughout the metropolitan region.

The Empire State Building was the home to almost all New York City television broadcasters before the World Trade Center was built. Many broadcasters want to return to it but the New York Times says that Empire has to little space and not enough electrical power to accommodate the demands of all the stations. So a coalition of 11 broadcasters in and around New York are exploring options that include sharing management of a broadcast tower built to their specifications and needs.

The Times says that the long-term situation may be the construction of an enormous stand-alone broadcast tower. One that is perhaps 2,000 feet high and preferably be somewhere near the World Trade Center twin towers site.

But broadcasters will face a large number of issues if they persue the stand alone tower idea. Chief among them are the wants and desires of the residents of New York City. Many of them have made it clear that the area where the twin towers once stood be rebuilt a both a new trade center and also as a lasting monument to those who died in the terrorist attacks of September 11th, 2001.

Not far from the Armostrong Tower in Alpine New Jersey, I'm Henry Feinberg, K2SSQ, reporting for the Amateur Radio Newsline.

--

Aside from the political issues mentioned in Henry's report there will be numerous other technical roadblocks. First is that of protecting the Philadelphia and Boston demographic television markets from interference. And if such a project is approved by the city at a different location, the Federal Aviation Administration will likely demand that it be built where it will avoid established flight patterns for local airports. And there are not very many of those in and around the metro New York City area. (ARNewsline(tm) from various published news reports.)

**

ATTACK ON AMERICA: VERTEX STANDARD / YAESU DONATES GEAR

According to a recent story in the ARRL Letter, Vertex Standard, which manufacturers Yaesu brand gear, has donated several pieces of equipment to Virginia ARES. The manufacturer had arranged to loan an FT-7100 transceiver and three of it's VX-5 hand-held's during the response to assist the Salvation Army at the Pentagon terrorist attack site. When the work concluded, Virginia Section Emergency Coordinator Tom Gregory, N4NW, e-mailed to thank the company and to inquire about returning the equipment. Vertex Standard Executive Vice President Mikio Maruya, WA6F told him that Virginia ARES was welcome to keep it on hand for future emergencies. The Woodbridge, Virginia, Ham Radio Outlet store cooperated in providing the Virginia ARES team with the needed equipment on September 13th. (ARRL)

**

REPEATER COORDINATION NEWS: NFCB AND NFCC ELECTION RESULTS

The National Frequency Coordination Council -- or NFCC -- has elected Nels Harvey, WA9JOB as its new President. Harvey replaces Owen Wormser, K6LEW. Wormser had served as Chairman of the original drafting group that resulted in creation of the NFCC back in mid 1990's and as several terms as President.

Also elected to office are Dave Baughn, K4XI as NFCC Vice President, Dick Isely, W9GIG as Secretary and Clay Freinwald, K7CR as the organizations Treasurer. Meantime, Clay Freinwald, K7CR, and Nels Harvey, WA9JOB, have also been elected for two year terms on the National Frequency Coordinators' Board of Directors. Both ran unopposed. (ARNewsline(tm))

**

REPEATER COORDINATION NEWS: SERA DROPS UNKNOWN CATEGORY

The South Eastern Repeater Association says that it has dropped use of the term ‘unknown’ for listing repeaters that it has little or no information on. According to the organizations publication Repeater Journal, the listing of about 150 repeaters as ‘unknown’ was intended to prod their owners to file delinquent updates or help clear the groups records of repeaters that are no longer on the air.

It did neither, but it did cause confusion for ham radio enforcement efforts. This occurred earlier this year when FCC Special Counsel Riley Hollingsworth cited the South Eastern Repeater Association’s Unknown Repeater List as grounds for dismissing a complaint against an uncoordinated West Virginia repeater that had been accused of interfering with a coordinated system in Kentucky. The coordination counsel’s FCC Liaison is reportedly working with Hollingsworth’s office to clear up the confusion. (SERA Repeater Journal)

**

HANDI-HAMS: WINTER RADIO CAMP IN MALIBU IN MARCH 2002

The next Handiham Radio Camp session will take place the first week of March, 2002, at Camp Joan Mier in Malibu, California. That camp will be offering classes in Technician, General, Extra, Operating Skills, and JAWS computing.

There is no tuition charge for West Coast or D-X members aside from the $45 registration and insurance fee. If you want to receive a camp application packet, please e-mail handiham@courage.org or call 1-866-426-3442 -- days -- Central Standard Time. The most current camp information is available on the Handiham website located in cyberspace at www.mtn.org/handiham. (Handihams)

**

INTERNATIONAL – BAHAMAS: FEES GOING UP

The annual fee for those holding a Bahamian Amateur Radio license has increased to $25. According to the ARRL news, The new fee applies for licenses renewed after August 1. The cost to "catch up" on past renewal fees prior to 2002 is $6 per year. Some US amateurs with Bahamian tickets were surprised to get letters requesting the back renewal fees and threatening fines and revocation. According to Dick Long, C6AKE, the Bahamian Public Utilities Commission--which handles licensing there--collects $6 a year for the years your license has been expired--this has always been its policy, he says. If you don't plan to use your license anytime soon, Long advises returning it to the P-U-C or sending a letter stating that you won't be using it again. "If, at some future time, you want to return to the Bahamas, you can always apply for a new license," he added. The P-U-C e-mail address is puc@batelnet.bs. (ARRL)

**

INTERNATIONAL - BELGIUM: A BLESSED EVENT

Hams in Belgium are getting to take part in a truly blessed event. This, as John Devoldere ON4UN who is the President of the Belgian national Amateur Radio society announces that nations radio amateurs can use the special prefix OQ instead of their usual ON or OT prefixes.

According to Devoldere, Belgian telecom authorities issued this special prefix on the occasion of the birth of Princess Elisabeth. The permission to use the OQ prefix began on October 26th, runs until December 31st. (RSGB)

**

INTERNATIONAL - NEW ZEALAND: THE NATIONS HAM-STATS

The New Zealand Ministry of Economic Development reports that as of November 1st that nation has 3,295 General Class license holders, 1717 Limited license class, 24 Limited Novice and 25 Novice class operators. These hams share 205 voice repeaters, 19 television repeaters, 29 digipeters, and 42 beacon operations. Mix in two fixed licenses and the grand total is 5358 licenses issued. (NZART)

(5 sec pause here)

**

HAM RADIO IN SPACE: ISS TALKS TO NEW YORK CITY SCHOOL

Ten elementary school students from New York City had some very specific questions about current events for International Space Station Commander Frank Culbertson. To the question, "What did it look like in New York on September 11," Culbertson responded that he could see the smoke rising from the World Trade Center site and drifting south.

--

Culbertson: “On September 11th we happened to be coming over a few hours after the attack and I could see a large column of smoke coming out of the World Trade Center and floating off to the South and a kind of a fog of smoke all over the Southern part of the city.”

--

Culbertson went on to explain that he took pictures of the tragedy from space. He further related that he found out about the event while talking to his doctor during a scheduled medical conference.

Another youngster wanted to know, "What does Afghanistan look like from space?" Culbertson answered that it appeared to be very desolate and rugged.

The questions could be expected. The children are students at P.S. 234, with its regular campus only two blocks from the site of the World Trade Center.

On September 11, all 650 students at the school and their teachers evacuated their building without a single casualty. The school community has stayed together despite the turmoil, and is now housed in temporary quarters elsewhere in Manhattan. Culbertson told the students that he admired them for their courage, and told them to continue to study.

--
Culbertson: " I want you to know that the whole world is very proud of you. Its to bad that you had to move from school to school, but we are very proud that you are continuing to work and take your education seriously. Things will be alright. Don't worry."
--

The students asked a total of twenty questions during the ten-minute contact. Some thirty teachers and parents and reporters were also on hand as were reporters from the New York Post and New York Daily News newspapers.

The ham radio contact was made through the Amateur Radio on the International Space Station project, an international coalition and was carried live by MSNBC on its website. Former NBC science editor and Newsline anchorman Roy Neal, K6DUE, moderated the event. Communication was handled through W6SRJ, a club station at Santa Rosa Community College in California, with Herb Sullivan at the controls.

P.S. 234 has its own website. Its in cyberspace at www.ps234.org/about.html (ARISS via K5YFL)

**

HAM RADIO IN SPACE: AMSAT-OSCAR 40 UPDATE

AMSAT's Peter Guezlow, DB2OS, reports magnetorquing of the OSCAR 40 ham radio satellite is again in progress. Guezlow also says that operational periods for the RUDAK system have been extended recently. This, to allow downloading of several important RUDAK G-P-S files.

AO-40 is currently in a long period during which the Earth eclipses the sun near the satellite's perigee. This actually began about August 28th, and will rapidly increase in length. The eclipses will continue well into June 2002. (AMSAT-NA)

**

SPACE AND SCIENCE: A LOT OF BIRDS UP THERE

SpaceDaily reports a new survey by the Teal Group has identified some 600 active satellites in Earth orbit or in deep space. The survey factored in all satellites launched since 1980, and, after a process of elimination, arrived at an estimate of 600 to 610 for satellites that remain active today. (AMSAT-NA)

**

DX

In D-X, you may recall that shortly after the September 11th terrorist attacks on New York City and the Pentagon, the government of Kuwait permitted its ham radio operators to the call sign 9K2USA. Now Bob Furzer, 9K2ZZ, reports a very positive response to the use of 9K2USA.

9K2USA was used by all Kuwaiti hams through September 30th as a token of the sympathy and support for the people of the United States from the citizens of Kuwait. It was also meant to be a statement of deep condolence.

Furzer now tells the Ohio Penn D-X Newsletter that the Kuwait Amateur Radio Society wants to thank all of those radio amateurs who e-mailed their support of the use of this special call. 9K2ZZ also says that the design of an official commemorative 9K2USA Q-S-L card has been finalized and is now posted on the website at www.k4cy.com. (OPDX)

From the U-K comes word of a new microwave D-X record. At least a new record for that nation. On Sunday October 21st the UK distance record for the 47 GHz band was raised from 163 to 203 kilometres. This happened when G7MRF and G0HNW, from Cambret Hill in grid I-O-74 had a two-way CW contact with G0IVA in gridsquare I-O-73 in North Wales. This distance comfortably exceeds the former record of 161 kilometres set in September 1999 by the same group. Reports of RST 519 and 419 were exchanged. (RSGB)

**

THAT FINAL ITEM: A MESSAGE TO REPEATER OWNERS FROM THE FCC

And finally this week, a word about repeater communications responsibility. It comes from the FCC's chief ham radio rules enforcer Riley Hollingsworth, and was included in a recent RAIN Enforcement Log Question and Answer session. If you own and operate a repeater, the next few minutes will be very important to you:

--

First of all, no licensee is required by the [FCC] rules to set up a repeater. When you do so, you do have certain responsibilities.

First, assuming that you have applied for and received coordination from your local repeater coordinating body -- if there is one -- and in a lot of areas there are not and in which case you would skip that step. As long as you are not interfering with a coordinated repeater, everything is all-right.

Once you start a repeater, you have to keep a few things in mind. First of all, if it is using your call sign -- it is your station -- and you are responsible for it. You do have a few alternatives as far as controlling it, but essentially it is your station and your responsibility.

The rule that states that you are not responsible for inadvertent transmissions I am afraid is often misunderstood. It only applies to inadvertent transmissions. [These are] transmissions that you let through on the repeater

-- and I think it was designed for [modes like] packet anyway that you let through on the repeater before you realized what was happening.

Now, rules violations that occur by your users on a day-in and day-out basis or rule violations that go on for several hours are your responsibility as well as that of the users that are committing the violations. No dictionary in the world would define those types of situations as “inadvertent,” and I am afraid that a lot of people just do not understand that.

If you put a repeater on [the air] you are responsible for its proper operation. Now, if you can’t do that, or you do not have the time or the inclination [to properly control it], then your choice is to shut if off and to do something else. This is very important in these times because Amateurs are being listened to more than ever before.

Everyone seems to be buying scanners and short-wave radios. Very often a repeater is new person’s first exposure to Amateur Radio -- and a potential recruit -- I might add. And, very often, it is the news media’s first exposure to Amateur Radio.

If your repeater is an embarrassment to Amateur Radio, then you should shut it down and seriously examine your motives for wanting a repeater. You will be held responsible for regularly occurring rules violations, as well as the people committing the violations.

I would hope that more and more Amateurs would understand this. I think that the rule that you are not responsible for inadvertent transmissions has been misinterpreted by a number of people.

--

What Hollingsworth really seems to be saying is that your repeater is kind of like your house and your surrounding property. Yes, you have responsibility to make your home secure for you and your family. You also have a responsibility to keep it and its surroundings neat and clean so that your neighbors will also enjoy the view. (FCC, RAIN)

Hi Dave,

Haven't heard any MT63 over here in Europe for months, it was quite popular for a while. I used it for regular rag-chews on 80 & 30 metres but I think that the unfriendly bandwidth made it unpopular. There was also an issue over in the States regarding band plans, most of the US stations were operating around the upper band edge on 20 metres due to them not being allowed such a "wide" mode in the data modes part of the band, not sure if that issue was resolve?

It's a resilient mode, but I find MFSK16 just as good and a bit easier on bandwidth.

Hope this helps,
--

Dave,

There isn't a lot of MT63 activity, but I have made several QSOs on 14109.5 kHz. and one on 18105 kHz. Some other frequencies I have seen mentioned are 3635, 10145, 21130 and 28130 kHz. IIRC, these are all USB except for 80m, and they are dial (suppressed carrier) frequencies, so the actual signal on 20m would be from 14110 to 14111 kHz. If you're interested in contacting others who have been trying this mode, you might consider joining the MT63 reflector at http://groups.yahoo.com.

73,
Rich VE3IAY

Hello all.

For some inexplicable reason, ZoneAlarm has suddenly begun to block data from my e-mail server address every time I try to connect to it, which obviously makes it unusable. There doesn't appear to be any facility in the program to reverse such settings. I have even uninstalled it and replaced it with the latest update (2.6.357), but the problem persists.

I wonder if there is anyone out there expert in such programs who might suggest a way round the problem? Obviously something is being stored in my system which maintains the corrupted setting.

A brighter note is that I have discovered another free download firewall program, 'Tiny Personal Firewall', which appears equally effective to ZoneAlarm, with the bonus that it offers the facility to adjust/modify its parameters, and so far is working very effectively.
But I would like to know if my ZoneAlarm is salvageable.

Hello Fred

The key to the operation is the right hand mouse button... To get your words quoted as I have above, I did the following:

1. Highlighted them.
2. Clicked on the Reply to Topic with the RIGHT hand mouse button.
3. Clicked "yes" when challenged about sending a bulletin.

It would have worked similarly had I clicked (right) on Reply to sender.

If you look at the Edit sub-menu, you'll also see an option to "Paste and Quote". This is for when you highlight then cut/copy text out of a context other than a bulletin or personal mail. You then can go to WinPack's edit window and Edit>Paste&Quote, which will insert your cut/copied text into the window, but with the quotation marks down the left hand side.

Hope that helps.

Hi, two questions on Graphics Packet if I may (v1.52).

1) Is it possible to print out just the text? I can at the moment only print out using the "Print Screen" button on the keyboard, and get an awful lot of unwanted garbage from the computor trying to draw out the clock etc.

2) Can I increase the length of stored pages ? Sometimes, on a particularly interesting packet day say, I command list last 30 from the bbs. After receiving the list, if I read, say, 5 messages, I cannot scroll back to the list of messages on "page up" on the keyboard 'cos the screen memory is now full and the programme will not let me go back that far.
Thanks for any response, 73's de Hugh

Hi. Thanks to the genius that is g7sri, I can now page up as far as any person could reasonably want to on Graphics Packet. However, printing without printing the clock and other unwanted junk is still a problem. Any more geniuses out there please ? Thanks in advance, 73's de Hugh

Can this be really true? It certainly is not true of VK as far as I am aware. If this is carried out world wide noone could post mail in English to a foreign BBS and communication between England and non English speaking countries would cease. Do you want that Trev.? If English law forbids the use of a foreign language on packet networks surely it must be the only country that does this.

>
> Simple rules / regs for using gb7fcr..

I got both sidebands just fine.  Maybe your filters are set too tight or
slightly off channel?

Ken,

Is it really such a good idea to post packet messages to this
newsgroup ?

Many of them have content unrelated to the purpose of this
rec.radio.amateur.digital.misc, and I'm sure you will know
what the reaction will be when some of the original posters
find out what has happened to their messages ......

73, Gareth.

Certainly they are off topic for this group.

If you are going to do this Ken, how about dropping them
into appropriate newsgroups, and providing useful return
addresses in the posts.

Hello, I have been interested in getting onto PSK31 for some time now. At the present the only rig I have is an HTX-100 10 Meter rig. My question is, does anyone have any ideas as to how I should go about building an interface to connect the radio to the computer? I know that there are basically four wires that connect the microphone into the 8-pin connector on the radio. Can someone tell me what I need to build the interface as far as parts goes, i.e. isolation transformers, etc? I also need help in terms of what wires I need to connect to what connectors, etc. I am not the best at reading schematics, so any simple explanations would be greatly appreciated. I am just looking for the simplest route possible as far as building the interface goes. I would even be willing to have someone call me collect if they could talk me through actually building the interface, etc. I do know that the HTX-100 is wired pretty much like the 8-pin Kenwood rigs, if this helps. My brother had a TS-50, and the microphone from his rig worked just fine on my HTX-100. Please e-mail me directly if anyone can assist me in a simple way to build a PSK 31 interface. Oh yeah, I have a Toshiba Satellite 110CS laptop computer with a PC card soundcard that plugs into the side of the computer. The soundcard has1/8 jack inputs for headphones and a microphone. Thanks for the help, and maybe I'll work you on PSK 31!

73,
Michael Brown KU4UV

Randy,

Thank you for responding. I have made two direct inquiries to Timewave from the email address listed on the web page and nobody ever responded.

I am still confused about the PK-232's value for sound card applications. I played with one Macintosh sound card software application that takes the audio direct from the rig and the software does the decoding. It worked okay but not all that great and I was not very impressed and went back to nomal RTTY using the PK-232 with the MacRATT software.

With the new Timewave PK-232 mod will I still be able to use the PK-232 in the host modes with standare software....like the AEA MacRATT? I currently use all ports on the rear. I use Radio 1 for VHF and Radio 2 for HF with a FSK connection to the middle port. Will I have to give up the FSK to install the PSK31 mod? Please clarify the PK-232's role for PSK31 operation.

From what I have read the new mod may let the PK-232 become better in line filter and something to control the AFSK keying of the transmitter. I was under the impression this was the role of the PSK31 software package.

Sorry if I sound confused.

Hi; new to this group; have a question.
Getting back on packet ... years ago built the digicom and
used c-64...now picked up a kpc-3 and hooked it to a 486dx100
and downloaded a package called buxterm(freeware). works but
as stuff comes in the top of the screen lines go to bit bucket...
so with no printer attached the stuff is history.
any programs that have maybe a scroll bar or something to look at a
couple screenfuls
of things i may have missed?.
Many tnx for any help, I see a lot of software on inet for packet,but no
descriptions
and really don't want to download and try one by one.

Jim, when you used the C-64 on packet back in the 80's, did you run the
TNC64 packet terminal program?

Jim,

If you have Windows 95 on your 486DX/100, then you can download the Pacterm 98 demo and use it for packet. It supports ultiple windows, one for each packet screen, and a 'bottomless' receive buffer.

http://www.cssincorp.com/pacterm

Hi Jim,

Take a look around for Paket 6.1, it's an old but good DOS program that'll work fine with the 486. It has scroll-back too. If you can't find it drop me a line direct.

73,

I found this on a bulletin board like this one and decided to try it.

A little while back, I was browsing through a newsgroups,just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of �5.00! So I thought, Yeah right, this must be a scam but like most of us, I was curious, so I kept reading.

Anyway, it said that you need to send �1.00 to each of the 5 names and address stated in the article

You then place your own name and address in the bottom of the list at #5, and post the article in at least 200 newsgroups. (There are millions) No catch, that was it.

So after thinking it over, and talking to a few people first, I thought about trying it. I figured: ;what have I got to lose except 5 stamps and �5.00, right?

Then I invested the measly �5.00. Well GUESS WHAT!!...within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, but the money just kept coming in.

In my first week, I made about �25.00. By the end of the second week I had made a total of over �1,000.00! In the third week I had over�10,000.00 and it's still growing.

This is now my fourth week and I have made just over �42,000.00 and it's still coming in rapidly. It's certainly worth �5.00, and 5 stamps, I have spent more than that on the lottery!!

Let me tell you how this works and most importantly, why it works.... Also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it.

I promise you that if you follow the directions exactly,that you will start making more money than you thought possible by doing something so easy!

Suggestion:

Read this entire message carefully! (print it out or download it.)

Follow the simple directions and watch the money come in! It's easy. It's legal. And, your investment is only �5.00 (Plus postage)

IMPORTANT:
This is not a rip-off; it is not indecent; it is not illegal; and it is virtually no risk - it really works!!!! If all of the following instructions are adhered to, you will receive extraordinary dividends.
PLEASE NOTE:
Please follow these directions EXACTLY, and �50,000 or more can be yours in 20 to 60 days.

This program remains successful because of the honesty and integrity of the participants. Please continue it's success by carefully adhering to the instructions.

Technically, you will now become part of the Mail Order business. In this business your product is not solid and tangible, it's a service.You are in the business of developing Mailing Lists.

Many large corporations are happy to pay big bucks for quality lists. However, the money made from the mailing lists is secondary to the income which is made from people like you and me asking to be included in that list.

Here are the 4 easy steps to success:

STEP 1:
Get 6 separate pieces of paper and write the following on each piece of paper ;PLEASE PUT ME ON YOUR MAILING LIST;

Now get 5 US $1.00 bills or 5 Uk � coins (or if you're from Scotland, notes) and place ONE inside EACH of the 5 pieces of paper so the bill or coin will not be seen through the envelope (to prevent thievery).

Next, place one paper in each of the 5 envelopes and seal them. You should now have 5 sealed envelopes, each with a piece of paper stating the phrase ;PLEASE PUT ME ON YOUR MAILING LIST;, your name and address, and a �1.00 coin or $1 bill. What you are doing is creating aservice. THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate service and you are paying for it! If you have any doubts, refer to Title 18 Sec. 1302& 1341 of the Postal lottery laws. Keep a copy of these steps for yourself and, whenever you need money, you can use it again, and again.

Like most of us I was a little skeptical and a littleworried about the legal aspects of it all. So I checked it out with the PostOffice and they confirmed that it is indeed legal! Mail the 5 envelopes to the following addresses:

1) Ms Alison Claren Grange Farm Barn, Hampshire RG25 2QBEngland
2) Ms J. Ferrere 2 Hemsley House, Streatfield Road, Heathfield TN21 8LA England
3) Ms T. Hutton 14 Blunden Drive, Langley, Berkshire, SL3 8WG

4) Ms V L Pirie 94 Provost Rust Drive Aberdeen Grampian Scotland AB167YL
5) Ms S E St John 60 Erw Non, Llannon, Llanelli, Carms Wales SA14 6BL
Now take the #1 name off the list that you see above, move the other names up (5 becomes 4, 4 becomes 3, etc...) and add YOUR Name as number 5 on the list.
STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there are close to 2.4million groups) All you need is 200, but remember, the more you post, the more money you make!

PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions. Look at it this way. If you are of integrity, the program will continue and the money that so many others have received will come your way.
NOTE:
You may want to retain every name and address sent to you,either on a computer or hard copy and keep the notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 in dark paper to reduce the risk of mail theft or if it is acoin, wrap it in tissue paper so that it does not slide around in the envelope.)

So, as each post is downloaded and the directions carefully followed, six members will be reimbursed for their participation as a ListDeveloper with one dollar or pound each.

Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving thousands of pounds inCASH!!!

What an opportunity for only �5.00 (�1.00 for each of thefirst five people listed above)

Send it now, add your own name to the list and you're in business!

---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS------------
Step 1)
You do not need to re-type this entire letter to do your ownposting.
Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this document, and select 'copy' from the edit menu. This will copy the entire letter into the computer's memory.

Step 2)
Open a blank 'notepad' file and place your cursor at the top of the blank page. From the 'edit' menu select 'paste'. This will paste a copy of the letter into notepad so that you can add your name to the list.

Step 3)Save your new notepad file as a .txt file. If you want to do your postings indifferent settings, you'll always have this file to go back to.

Step 4)
Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions.)

Step 5)

Visit these message boards and post this article as a newmessage by highlighting the text of this letter and selecting paste from the edit menu. Fill in the Subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the postmessage button. You're done with your first one!

Congratulations...THAT'S IT!

All you have to do is jump to different newsgroups and postaway, after you get the hang of it, it will take about 30 seconds for each newsgroup!

REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200

That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O.Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it.

JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.

Now the WHY part:
Out of 200 postings, say I receive only 5 replies (a verylow example). So then I made �5.00 with my name at #5 on the letter.

Now, each of the 5 persons who just sent me �1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of the original 5, that is another �25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional �125.00!

Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional �625.00!

OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they each only receive 5 replies,that just made me �3,125.00!!!

Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still ONLY 5 persons per 200 newsgroups react I will receive �15,625!

With an original investment of only �5.00! AMAZING! When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $5.00 to names on the list, putting your nameat number 5 again. And start posting again.

The thing to remember is: do you realize that thousands of people all over the world are joining the internet and reading these articles everyday?, JUST LIKE YOU are now!!

So, can you afford �5.00 and see if it really works?? Ithink so...

People have said, what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try?

Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual internet. <Remember, play FAIRLY andHONESTLY and this will really work I found this on a bulletin board like this one and decided to try it.

A little while back, I was browsing through a newsgroups,just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of �5.00! Hi all
I would like to adapt my home made receiver control programme to a friends FT757 GX II.
Could anybody do me a favour?
I send a SASE and contribute to the copy expenses.
Would you make and send photocopies of just the manual pages which describe the control protocol.
(Commands, handshake and connector).

It would be very nice to help me in this matter.
If yes, send me your snail mail address via net mail.

Thank you in advance

Roland Burkhard

I can scan the pages and send them to you by email
(5 pages, 500k per page in .jpg format)

What do you think?

I'm sure your friend knows that he needs an interface between rs232
and the radio?

I have the FIF-232 interface by Yeasu
I use only 3 pins on the connector in the back of the radio:
pin 1- Gnd, pin 2 - S.out, pin 3 - S.in
be sure to shield your cable.

Stephan VE2OWL

It is amazing that people keep on circulating the same old tired get rich
schemes.

There is only only one true way to wealth.

If everyone who reads this message simply sends me $10 I will be wealthy in
just a short time.  And I thank you.

start
> making more money than you thought possible by doing something so easy!
>
> Suggestion:
> Read this entire message carefully! (print it out or download it.)
>
> Follow the simple directions and watch the money come in! It's easy. It's
> legal. And, your investment is only �5.00 (Plus postage)
>
> IMPORTANT:
> This is not a rip-off; it is not indecent; it is not illegal; and it is
> virtually no risk - it really works!!!! If all of the following
instructions
> are adhered to, you will receive extraordinary dividends.
> PLEASE NOTE:
> Please follow these directions EXACTLY, and �50,000 or more can be yours
in 20
> to 60 days.
>
> This program remains successful because of the honesty and integrity of
the
> participants. Please continue it's success by carefully adhering to the
> instructions.
>
> Technically, you will now become part of the Mail Order business. In this
> business your product is not solid and tangible, it's a service.You are in
the
```

> business of developing Mailing Lists.
>
> Many large corporations are happy to pay big bucks for quality lists.
However,
> the money made from the mailing lists is secondary to the income which is
made
> from people like you and me asking to be included in that list.
>
> Here are the 4 easy steps to success:
>
> STEP 1:
> Get 6 separate pieces of paper and write the following on each piece of
paper
> ;PLEASE PUT ME ON YOUR MAILING LIST;
>
> Now get 5 US $1.00 bills or 5 Uk � coins (or if you're from Scotland,
notes)
> and place ONE inside EACH of the 5 pieces of paper so the bill or coin
will not
> be seen through the envelope (to prevent thievery).
>
> Next, place one paper in each of the 5 envelopes and seal them. You should
now
> have 5 sealed envelopes, each with a piece of paper stating the phrase
;PLEASE
> PUT ME ON YOUR MAILING LIST;, your name and address, and a �1.00 coin or
$1
> bill. What you are doing is creating aservice. THIS IS ABSOLUTELY LEGAL!
You
> are requesting a legitimate service and you are paying for it! If you have
any
> doubts, refer to Title 18 Sec. 1302& 1341 of the Postal lottery
> laws. Keep a copy of these steps for yourself and, whenever you need
money, you
> can use it again, and again.
>
>
> Like most of us I was a little skeptical and a littleworried about the
legal
> aspects of it all. So I checked it out with the PostOffice and they
confirmed
> that it is indeed legal! Mail the 5 envelopes to the following addresses:
>
> 1) Ms Alison Claren Grange Farm Barn, Hampshire RG25 2QBEngland
> 2) Ms J. Ferrere 2 Hemsley House, Streatfield Road, Heathfield TN21 8LA
> England
> 3) Ms T. Hutton 14 Blunden Drive, Langley, Berkshire, SL3 8WG
> 4) Ms V L Pirie 94 Provost Rust Drive Aberdeen Grampian Scotland AB167YL
> 5) Ms S E St John 60 Erw Non, Llannon, Llanelli, Carms Wales SA14 6BL
> Now take the #1 name off the list that you see above, move the other names
up
> (5 becomes 4, 4 becomes 3, etc...) and add YOUR Name as number 5 on the
list.

> STEP 3: Change anything you need to, but try to keep this article as close to
> original as possible. Now, post your amended article to at least 200
> newsgroups. (I think there are close to 2.4million groups) All you need is 200,
> but remember, the more you post, the more money you make!
>
>
> PLEASE REMEMBER that this program remains successful because of the honesty and
> integrity of the participants and by their carefully adhering to the
> directions. Look at it this way. If you are of integrity, the program will
> continue and the money that so many others have received will come your way.
> NOTE:
> You may want to retain every name and address sent to you,either on a computer
> or hard copy and keep the notes people send you. This VERIFIES that you are
> truly providing a service. (Also, it might be a good idea to wrap the $1 in
> dark paper to reduce the risk of mail theft or if it is acoin, wrap it in
> tissue paper so that it does not slide around in the envelope.)
>
> So, as each post is downloaded and the directions carefully followed, six
> members will be reimbursed for their participation as a ListDeveloper with one
> dollar or pound each.
>
> Your name will move up the list geometrically so that when your name reaches
> the #1 position you will be receiving thousands of pounds inCASH!!!
>
> What an opportunity for only �5.00 (�1.00 for each of thefirst five people
> listed above)
>
> Send it now, add your own name to the list and you're in business!
>
> ---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS------------
> Step 1)
> You do not need to re-type this entire letter to do your ownposting.
> Simply put your cursor at the beginning of this letter and drag your cursor to
> the bottom of this document, and select 'copy' from the edit menu. This will
> copy the entire letter into the computer's memory.
>
> Step 2)
> Open a blank 'notepad' file and place your cursor at the top of the blank page.
> From the 'edit' menu select 'paste'. This will paste a copy of the letter into
> notepad so that you can add your name to the list.

>
> Step 3)Save your new notepad file as a .txt file. If you want to do your
> postings indifferent settings, you'll always have this file to go back to.
>
> Step 4)
> Use Netscape or Internet explorer and try searching for various newsgroups
> (on-line forums, message boards, chat sites, discussions.)
>
> Step 5)
> Visit these message boards and post this article as a newmessage by
> highlighting the text of this letter and selecting paste from the edit
menu.
> Fill in the Subject, this will be the header that everyone sees as they
scroll
> through the list of postings in a particular group, click the postmessage
> button. You're done with your first one!
>
> Congratulations...THAT'S IT!
>
> All you have to do is jump to different newsgroups and postaway, after you
get
> the hang of it, it will take about 30 seconds for each newsgroup!
>
> **REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL
MAKE!! BUT
> YOU HAVE TO POST A MINIMUM OF 200**
>
> That's it! You will begin receiving money from around the world within
days!

Hi all.

Just an update to say I hold the latest soundcard software's for PSK, HELL, RTTY, MFSK, SSTV etc for both MS Windows, Linux, and MAC. All on the Software & Circuits Page.
Plus a range of isolation interfaces to use between your rig, and pc soundcard. These are high quality units at a very competetive price. There are also other bits and pieces on the Interface Products Page.

Take a look see :-)

http://www.g3vfp.com

Regards,

Dave G3VFP.

Hello,

Can anybody send me a schematic and hex file of packet radio modem 1200 bd built with PIC 16c620 or 16c621. I saw the same on the hamfest but can not find nothing on the web.

Thanks Adam, 9a4qv

Good morning Stephan,
Thank you very much for your prompt answer and kind offer.
Yes, please! If you would scan these 5 pages and mail them to me in any format.
Max mail size ca. 1 M.

We have the RS 232 interface and respective hardware know how.
What is needed is just the protocol description.

If you want to have your eventual expenses paid, please note it.
Otherwise, give your snail mail address. I will send a nice QSL

Thanks again and best regards from Switzerland

Also look at the 2n2222 interface on www.qsl.net/wm2u. I built that one and
used the same 600ohm 1:1 audio transformer circuit that is on that page. All
the parts can be had at Radio Shack including the PC board/project box combo,
and using the MPS 2222A switching transister they carry. I use it on an HTX
100 and worked 117 countries in 2 weeks on 10 mtrs. Waiting to get the cards
to confirm it (PSK DXCC).
Good Luck and catch ya on 10 mtrs soon

Anybody using a TRGPro PDA and PocketAPRS?
Just curious. If I understand the TRGPro properly, it can be expanded
to have two serial ports, which would solve the requirement of a GPS
compatible TNC. I have never seen one of these creatures out in the
wild, so that is one of the reasons why I ask.

Thanks

Dean

Hello Ron
Can't help you with the pinouts but as far as soldering the wires to the DIN plug. I think you might be able to acquire an old mouse or keyboard that has the same DIN plug. Just cut the mouse or keyboard off of the cable and use that cable with the plug already installed and with molded strain relief.
73's John KE5RS

Unless you're planning on doing binary file transfers, why use a dedicated packet program? Wouldn't your TNC work with a generic terminal program? ProComm? Telix? MS-Windows Terminal? Win9x HyperTerm?

Just a question...

ModemSwitch(tm) version 1a is now available at http://www.timewave.com.
(It's FREE!)
ModemSwitch(tm) is a neat little utility program for the PK-232/PSK. Its main function is to switch the PK-232/PSK between internal modems and sound

card modems, but it's a great utility to help sort out your computer serial port-to-PK-232 (or other Timewave/AEA data controller) communications. It identifies available serial ports, reads firmware version date, and lets you select the computer-to-TNC baud rate. If that isn't enough, check out the Dumb Terminal window for quick verification of TNC operation.

Hello.

Currently, I've got an old Dell Latitude XPi 120 mHz laptop with an Altec Lansing outboard sound card in the shack...and I'm having some problems.

Every time I turn the laptop on, a high-pitched whine is noticable on the radio, which is about 2 feet away from the laptop and runs off the same power outlet. I've narrowed it down to the laptop's monitor as the culprit, because the sound card by itself is quiet, and when I tilt the screen down or away from the radio, the whine goes away. The interference is more noticeable on SSB than AM.

Does anyone have advice on how to get rid of this interference? I'm going to be moving my shack soon, and will have access to several more outlets; would plugging the computer and the radio into seperate outlets do anything? What about installing RF chokes on the computer's power cords?

Thanks for any help.

73s,

Jim

Hello everybody,

i am sorry if this post is a repetition, but i have searched DEJA and i am not wise from what is there.

My background is 2 years of electrical engineering (cybernetics) and almost no radio electronics, besides theoretical stuff like modulation, fourier computations, filters and the like.

I need to construct an SSB (a term I just found on the net :-) receiver suitable for NAVTEX (518 kHz), the project needs at least 15 electrical components and should be a class IV PCB with max 4 layers.

Can anyone PLEASE point me to some place where I can get Information on constructing SSB receivers ?? NAVTEX uses SITOR-B (FEC) to transmit. Since I can't orientate myself very good in these waters, i don't exactly know where paydirt is ...

thanks to anyone who answers

Hello Martin!

Oh boy, you will need more than 15 elements to build NAVTEX receiver, that's for sure.
So what you need is MW receiver capable of receiving frequency of 518 khz and decoder for sitor-B
mode. This equipment is comercial but you can find on the net software for decoding the same, so you need a receiver and computer. More information about navtex you can find on the maritime pages because this system is used only for marine purposes.

Good luck, Adam

Just one word of advice: that custom designed and fabricated 4-layer board is going to cost you a fortune, compared to the rest of the radio. Most one-of-a kind construction uses anything except a multi-layer board which is a major design and fabrication project in itself.

And expect to need considerably more than 15 components.

If you can obtain a copy of the American Radio Relay Leaguq (ARRL) Handbook, it will contain much information for you.

Is this a school project or your work assignment or what? Just curious . .

: .

It sure sounds like a school project. If it is, it's probably at
some university with its own PC board fabrication setup, so the
multilayer board may not be such a lunch-eater. More than a few
universities even have their own chip-fabrication hardware now.
(I gotta make friends with some EE profs here in town!)

If, OTOH, it's a _work_ project, then one hopes work is picking
up the tab.

Dosen't anyone BUILD anymore?
Mine cost about $10 in RS parts, works fine.
If you value your time though, $50 isn't bad if all you have to do is plug it in.

Hey George,

I am the one who has to design the board with OrCAD soft.   And i am probably going to fit the receiver on a 2layer board, this shouldn't be such a financial drain. And i don't have to give them the board, the board i can keep, so no problem there ... :-)

I do expect the component count high up, but then 15 is just the lower bound :-)

I just checked and the nearest place to get the ARRL handbook is Germany, somewhere in the middle ... i don't think this is too good for me ...

Martin

Hey Mike,

I live in the Czech Republic and i attend CTU (Czech Tech. University), the only thing they have here in excellent quality is theory (mathematics -> complex analysis & fourier, laplace, physics of components, etc.), compared to US universities we don't have zilch, but i can get a shop to do the board for me without killing my budget for the next 10 years :-) I do expect the component count to go up.

have a nive day

Martin

Hey Adam,

actually i am fine with NAVTEX and i can program the decoder of CCIR 476 in
software including the separation and cross-check of the NAVTEX channels

with no problems at all and i can handle the PC side of RS232 with no trouble too

The problem is the receiver, so what i exactly need is:

SSB receiver
518 kHz - fixed tuning
Conversion to RS-232

- i know i can buy (even in the Czech Republic) an FSK modem able to handle the NAVTEX signal for about 3$ (1700 Hz, 170Hz mark-space distance, 100 bps)
- the RS-232 comms can be handled very easily using a MAX232 chip (TTL-->RS232)

--> so i need a tuned amp, an oscillator giving me 518kHz and a mixer to extract the 1700 Hz wave, then feed that into the FSK modem and the modem can give me the 1s and 0s. Do i have that right ??

what i need urgenly is to decide quickly whether to use a heterodyne or direct-conversion receiver (i still don't see which one is better for me and the merits of each system - no experience or idea here ??)

I would very much appreciate any fast pointers to get me going, the preliminary is due tomorrow (yes - i know i slipped on that a little bit, but i thought i had the thing ready and didn't consult any pro's and that's what happens :-((

Thank you very much people
Martin Vejmelka

The pieces you need are 1) a SSB receiver that will receive the SITOR FSK signal and give you FSK audio tones out of the receiver. 2) Follow that with a modem to convert the audio tones to a digital signal at RS-232 levels. 3) Follow that with a SITOR decoder. 4) follow that with the display. The decoding and display could be done in a PC by taking the digital signal into a serial port or the audio from the receiver could go into a computer sound card and perform the modem functions in the PC along with the decoding and display functions.

I've never worked with NAVTEXT but as I understand it, it is a matter of parsing the text data (message type and ID number) coming out of the SITOR decoder to create filters to properly route the messages. This makes sure that only messages of interest are saved and that they are only saved once even though they may be transmitted by the SITOR station multiple times.

SITOR is know in amateur circles as AMTOR Mode B or AMTOR FEC so you may be able to find some info by searching on these terms.

On December 04, 2001 at 1800z a change to the New Orleans radiofax broadcast schedule is planned. This revised schedule restores the U.S. surface analysis, adds more products to the popular 0z and 12z broadcast periods and adds a test message to aid users in tuning their receivers. See the Preliminary Broadcast Schedule for New Orleans at:
http://www.nws.noaa.gov/om/marine/radiofax.htm

timothy.rulon@noaa.gov

WTB: PacComm Packet TNC adapter for Pactor TNC!
I have a PacComm Pactor Controller (SCS PTC-1 design, made by PacComm) which appears to be pre-wired for an upgrade kit to allow regular Packet Radio to be used by pushing a front panel switch. The front panel has holes for additional LEDs and the button is already installed. Inside there appears to be a long header strip of pins where this �upgrade kit� could be plugged in.
Anyone have this unit available?
Please drop me a line if you have any info!
Thanks and 73,
Mike VE3EQP.....>

Need your help. I need to change the position symbol (like a car or truck) on this Alinco TNC. Have done this successfully from the setup box for the Tigertronics TM-1 and from the setup box for the TinyTrack. Also, I have successfully made changes on the "LT" line when setting up a digi to make it show a star, etc.

This Alinco DR-135 has a small, limited command set, EJ-41U TNC built in. Wants to use it as a tracker, and I have set it up for that. As a tracker, it is working fine. The LTEXT line loads okay based on info from the GPS, and nav info is plotted correctly on our APRS-SA maps. Currently it shows in the position list in the APRS-SA software as an ambulance symbol (accidentally changed it from a red dot to an ambulance, don't know what I did). Need to know how to change the symbol? Can't determine where to introduce the command into the command set. To my knowledge, this little built-in TNC does not have a "setup" box like the others. I have set everything by working in the command set directly, like setting up a digi.

73,
Carl Sherman W5SBH

From what I believe, France use 'L' band (1.5 GHz) for DAB, whereas the rest of Europe use Band III. L band is going to be
available in the UK in some years from now (maybe 5?). I believe the European model (DRX-602ES) covers both L Band & Band
III, whereas the UK version just does Band III, which explains why it's cheaper.

A UK model should work in countries where they are using Band III for DAB & I'd doubt that you'd have any problems with
character recognition on the display, as like RDS the spec incorporates the whole ASCII character set.

Greetings,

Pete <nobody@nowhere.net> wrote:

Well, there are other countries that also use L-band. Germany uses both
band III and L-band.

If you do it 'by the book' (that is, the original proposals) band III is meant to be used for longer distances (like a nation-wide SFN or a 'regional' network operator); and L-band for 'local' muxes. (As L-band doesn't really carry that far as band III-signals).

That was the basic idea; but -as every country has its own frequency-plan- this can be implemented differently if the local need merrits its.

Anycase, if (say) the DAB-operators off London would have used L-band, a lot of the listeners who are now on the fringe of the network coverage area and use directional antenna's whouldn't have been able to receive them.

> ... L band is going to be

I don't know the real technical differences between the the two models and I don't think this is yet the case in these models but -in time- having a single model that covers the complete worldwide market for DAB will mean that a dual-band model should be cheaper then a single-band model. (just as is the case for 900Mhz/1800Mhz GSM phones).

A single model DAB-receiver will probably be just a dual-model receiver with (somewhere) an extra diode that disables reception on either band (or even just a hidden software-feature in the firmware of the box). They are usually just an excuse to ask some extra euros for the dual-band model.

Cheerio! Kr. Bonne.

IIRC the ASCII set is only 7-bit and omits many characters used in Europe.

Slainte,

Jim

I have been running digipn here on this system ok for a while. Then I
had to blow away the disk and completely reload Windows 98, etc. Now,
digipan 1.6d starts with an error complaining that either another task

has the sound card, or one is not installed.
Well, there is definitely one installed and no other tasks are running
except Explorer and systray.
All other apps that use sound work, MMSSTv(slow scan), netmeeting,
games, etc work ok, but Digipan does not recognize the sound card.
As stated, it worked before I rebuilt the hard drive....

Sound system is Via southbridge 82C686B AC97.

What the hell is the matter? If Digipan was open source I could debug
myself. But, since it is not, I am totally reliant on the original
developers to find out the problem.

Oh, it works perfectly on my HP laptop.

I obviously have something set wrong on my PK-232MBX. I get garbage when trying to receive morse, rtty and amtor with it. It works fine on VHF packet.

I set the HF rig on LSB, turn off all filtering, listen for the signal, start copying but just get trash.

Any tips for this beginner in HF digital modes?

David KB5YLG

```

On the low bands the apparant frequency changes as you tune in the signal. Not that this is stating anything you did not know. YOu are probably just not getting the thing tuned in to the correct frequency.

YOu are only allowed a very narrow window for rtty. You have to set the frequency to less than about 25 to 50 hz. Afterall you only have 170 hz from the mark to the space tone. When doing VHF you do not have to deal with this tuning problem.

YOu may want to go here and download some programs that work with the sound card in the computer.

http://www.muenster.de/%7Ewelp/sb.htm

Then as you learn how to tune in the signals (most of the sound card programs tune in by visual means on the screen) you will get a feel for the sound of the digital signals.

While many modes seem to work really well, don't expect the morse code to work too well unless you are receiving a signal sent by machine or computer. The computers just don't seem to be able to handle the hand sent code very well .

YOu may want to try for the W1AW RTTY signals. They are normally received using lsb, 170 hz shift, 60 wpm baudot for the first part of the message.

Thanks very much. I think I have been using 45wpm baudot to try to copy the rtty, which is default. Is 60wpm more common?

david

YOu may be confusing the baud rate and wpm. The normal ham rtty is 60 wpm or it could be stated at 45 baud. I think it is more like 45.45 or something like that . There is a slight differance in the socalled 60 wpm stuff where some is sent with only one stop bit and some is sent with 1.5 stop bits. This is not usually a problem for receiving as the converters should handle this slight differance in timming. Also some may be using 200 hz shift instead of the normal 170 hz shift. Also for receive it probably does not mater all that much but you should have it set for 1.5 stop bits (could use 1 for receive if the 1.5 is not an option and 2 for transmitt) no parity.

>
>Any tips for this beginner in HF digital modes?
>

David -

PACKET:
There is a PK232 command VHF ON|OFF - which sets the packet tones
OFF - sets a 200Hz narrow shift for HF operation

RTTY:
WIDESHIFT ON|OFF does a similar thing for RTTY. The default is 'OFF' - suitable for most HF, but worth checking that this is the setting in use.

RBAUD x - sets the baud rate and defaults to 45 baud but the command RBAUD UP|DOWN will move up or down to the next preset speed. In my firmware version, speeds were 45, 50, 57, 75, 100, 110, 150, 200, 300 baud. (45 baud = 60 wpm according to the manual)

RXREV T - will toggle the tones as if the distant station was using the other sideband. Useful to check that RXREV and TXREV are both OFF to avoid confusion.

Hope this helps

HI, tried i - link under win95/98 and its fine, but i only use NT,
(tried it on a friends machine) the client version, when i click BEG
locks the bigger menu window, and i have to resort to task manager to
shut it down.

d/loaded the server version, and it does'nt lock up, so far,
but keeps asking if my password is correct?

i have treid using / modding the ini files and sharing the same
working ilink program between OS's but NT just wont have it,

any ideas would be very much appreciated,

i'm not running it as a server, just as a normal client,
& i'm, logged into NT as Administrator, no network,
just normal dial-up. soundcard is 100% service pack 4 too.

Anyone ?

Mark, G0YNM

As far as I can tell, there's not a group specifically geared toward
Linux and amateur radio. There are several that might be able to help
with specific questions, though.

For issues related to a specific distribution, alt.os.linux.* might be
a good place to start. The regulars in alt.os.linux.slackware are
particularly knowledgeable. If you use Red Hat, though, you won't
find a Red Hat-specific group in a.o.l.* (at least not on my news
server). Red Hat's distro-specific group is comp.os.linux.redhat.

comp.os.linux.networking fields the occasional query about AX.25, and
lots about TCP/IP (though mostly in the context of wired Ethernet or
802.11b wireless networking). There aren't too many threads that
discuss amateur radio topics in great depth, but I suspect that's due
to a lack of questions. Personally, I'd love to see some more
interesting discussions on these topics. In fact, I'll probably be
posting a few questions myself when I get my license, as my primary
interest is packet radio.

comp.os.linux.hardware might be useful if you're into building your
own gear, and want it to be interoperable with a Linux system. Or, if
you want your project to actually *be* a Linux system of some sort,
comp.os.linux.embedded might hold some useful info.

Hope this helps!

However, there's a mailing list linux-hams hosted at vger.kernel.org.

It is for questions relating to ham radio on linux. Unfortunately
it is quite often full of general questions about linux from people who
just happen to be hams.

I'm sure HyperTerm would work, it worked for me. But Paket 6.1 is much nicer. It knows the TNC setups, has TNC help included, and it knows that the sorts of things you do with packet aren't quite what you do when you're telnetted to a Unix host.

Right now I'm using minicom on Linux with my MFJ-1274. Sure it works, but it's nowhere near as nice as Paket 6.1 was. Does anyone know of something like Paket 6.1 for Linux? Not looking for some elaborate X program, just a simple character based program that I can run on a lightweight system.

Perhaps http://www.radio-portal.org can help; although there are not too
many links for Linux, each of it deals with amateur radio.
I will be happy to list more links, new ones will be appreciated via the
"Feedback" page.

Hello to all, I'm looking for recommendations for SSTV shareware that's
beginner user friendly. Something that uses the sound card. After 23
years as a ham it's about time I give the mode a try...hi

Thanks for your time in responding

I tried a lot of them to see which was the easiest and found JVCOMM to be one of the easiest to use.

http://www.jvcomm.de/indexe.html

Give it a try!

Regards,

Duffy - WB8NUT

Look here for the sound card softwear and give the MMSSTV a try.

That would be a good choice to start, as it is the calling frequency. Make a contact, and then move off to converse.

My 2m SSB rig bit the dust recently, so I would be there if I could :-)

Andy is steering you in the right direction. We use a bunch of these TNCs at the Army Western MARS gateway station for both Packet and PACTOR circuits. When switching from VHF/UHF Packet operation to HF Packet, in the command mode enter 'VHF OFF' (this switches the FSK tones from wide to narrow). Then you need to change the HBaud rate from 1200 to 300 bps (enter 'HB 300'). More than likely, you need to perform similar changes for RTTY and AMTOR data modes. 45 (45.45) baud, 60 wpm, is the most common RTTY speed. (believe HF packet/ RTTY/AMTOR/PaCTOR modes all use the same 2100/2300 Hz tone pair.) The provided manual is not very clear on these items (you will probably need to read the appropriate sections several times before things start to click).

I downloaded and ran a couple of programs for use with a sound card. Took audio from the radio at the external speaker jack but can't get anything to work. When I put the audio into the "line IN" I can hear it over he PC speakers. When I tried the audio thru the "mic IN" I was not able to hear anything. But neither way did I get anything on the computer screen. The programs I was trying were WinPSK, MMSSTV and MMRTTY. Any help?
Thanks

What OS, W95, W98, ME. 2000, DOS, XP, what?

Look at your mixer settings if in windows 95, 98, ME, the little speaker icon on your taskbar. Have you selected the line -in as a valid active input? If you dont have the mixer setting on your taskbar go into control panel select "multimedia" and check the box to display mixer on taskbar.

Also be sure you are using mixer as an input device.

You need to select line in in the recording properties.

Go into the mixer (double click the speaker icon on the system tray),
go to the Options menu, select Properties, select 'Adjust volume for
recording'. Then enable 'Select' next to line-in.

Hamish

Hi,

I just bought a MFJ-1275 inteface.....

Does anyone know how to configure the jumpers for a Icom 706.

I don't know of anything specific. You may want to check out http://radio.linux.org.au and see what's there. That is the official Linux ham radio site.

The following is a snip of the Poor Man's Line Monitor of the actual COMM Port I/O bytes that are present in the short load run of the AEA Win 3.1 control program for it.

I realize that there is a problem in this application with Y2K and did not realize it until AEA dropped selling the 'fixed' version but all I have is OS/2 and WIN 3.1, which is Y2K compliant and all.

The AEA PKWIN program still runs both the AEA PK900 and PK-96 units just fine, but it hands on a 'BAD COMMAND' error right at first of the load run. If you just tap through it, all still works, assuming that any date range errors don't make any difference for practical purposes.

They have been running for all this time since Y2K except for this.

Actually, this error was in there before Y2K anyway.

Here is the actual byte run which pops the error starting the load.

What is this?   Can it be patched or stopped with some control parameter setting?

   ***OHPYOHP OXWYOXW OHO3OHO ODA10111260506ODA
```

It looks like the thing that pops this is the 10111260506 numeric sequence. I'm a fully qualified licensed user of this program.

Any help?

--> Sleep well; OS2's still awake! ;)

Hi all,

Anyone running 1200bd AX.25 on 70cm band in southern Ontario?

thanks,
James

All APRSers,

Check out the APRSPoint software on www.aprspoint.com. It utilizes Microsoft MapPoint to provide high quality, detailed street map data, and it integrates MapPoint in an easy to use interface. You can do address lookup, point to point routing with MapPoint, and it offers better maps than Street Atlas. Right now you can get Microsoft MapPoint trial version for $9.95 for 60 days. APRSPoint implements the latest APRS standard, and supports position, status and weather reporting. You can also do APRS messaging with it. It supports AGW packet engine to use sound card as TNC in addition to standard serial TNCs. It does station tracking, signal range plot and has GPS tracking capabilities. For details, go to the website and get the free APRSPoint trial software. thx.

While spinning around on 20m I have been hearing a couple of sounds but not qiet sure what they were exactly. One sounded like CW at 60 wpm. Another was like RTTY on steroids. And last was like hf packet but not quite. What were they?

Also with all these new modes I read about in QST, (PSK,MFSK16 etc,) is there any site that has the sounds they make stored as a WAV file so I can possibly know what I am listening to, so if I wanted to try one I could?
Thanks
ed

Go here and download some of the free programs.

http://www.muenster.de/%7Ewelp/sb.htm

Then run them on the computer. They are sound card programs that do the digital modes. You can set them to transmitt and send the tones out to

the computer sound card speaker system That will let you know what the
'strange' tones sound like when you hear them on the air.

Hi,

There is a current thread on this group about mechanical TV, or Narrow Band TV. I was wondering if there are any electronic implementations of this system as the Web sites I've looked at regarding NBTV seem to concentrate on mechanical methods of scanning the picture and displaying it at the receive end. I'm thinking of Web cam type transmissions over normal SSB voice bandwidth using soundcard software like the IZ8BLY program from ON1AIJ's web site on http://users.pandora.be/ON1AIJ/

Any info appreciated.

Why pay the price of an assembled kit and build it yourself...for 15.00 or less
you can build it from plans on the net. WWW.packetradio.com and
www.qsl.net/wm2u are both excellent sites for plans to build it. you could
have it done and ready before your 706 even gets to the house ... Even if you
have never picked up a soldering iron in your life this is a fun little project
to start out with.
73 and all the best

'cause we had KISS, for the most part. You're looking for an
'open platform' API for a TNC2, to do embedded work with it.
That's different the traditional mindset of the amateur community
which was mostly concerned with people-people communication.
If it wasn't BBS or keyboard-to-keyboard, it wasn't very interesting
to most, until APRS came along.

Experimenters used KISS, otherwise.

```

Good Morning,
I've produced the following QPSK Modulator, then to test it I also produce a simple Demodulator that did not take in account frequency and symbol synchronization but I think that for this simulation this is not necessary, if you think different please explain me. In any case the result are not so good in fact the final BER is higher than the teoretical one, in particular I'm not sure about these formulas that I took from a Matlab example :

```
   SNR_dB = SNR_x_bit_dB -10*log10(0.5) - 10*log10(f_clk / (data_rate) );
   QPSK_et_noise = awgn( (QPSK) , SNR_dB, 'measured' , [] ,'dB' );
```

Escpecially the first use some correction that take in account the data rate of the modulator. I'll be very happy if you want to try this simulation formed by two files and tell me if you find something that is concettually wrong.

Really Thanks ...

Antonio D'Ottavio

This is interesting, but it is not what I am looking for right now.
(see other posting, what I am looking for is a firmware that allows
downloading a small application or burning a small application in a
reserved area INTO the TNC)

However, when the firmware you mention is freely available, it would be
nice to have it available somewhere on the net.

Of course I used KISS until I dropped the entire use of TNCs and switched
over to SCC cards.

But maybe you did not understand completely what I like to do: the application I write would be in Z-80 code, and would run on the TNC itself. So there is no other system that would communicate with the TNC in a way I define myself, but the other system has an RS232 port and outputs data that I would like to transmit in packet.

Of course I could put another computer between the two, converting the data to what I want to transmit in packet, but that would be very much overkill in this case.

Yesterday, I tried MFSK16 for the first time. Wow!

With my TRCVR, I use HamScope 1.4 software (http://users.mesatop.com/~ghansen/) on an old 120 MHz Pentium PC with a Creative AWE32 soundcard. I soldered together an interface having two 600 ohm audio transformers and a 4N35 optocoupler for isolation. When this was finished I was QRV 10 min's later!

Very exciting! It's fantastic to watch transmissions at noise level to be copied with ZERO errors!

I truly recommend this mode to anyone.

Jan

Of course I understand completely what you desire to do, Rob.
You want build embedded applications that run inside a TNC2,
and you even want to have the ability to load the applications
into the TNC2's RAM, to save the hassle of burning them into an
EPROM.

From a bigger picture perspective, you want to dedicate the entire
TNC2 to some specific task.

My comment was that this isn't the kind of experimentation
that was once popular among packet experimentors. I find the
concept fascinating myself.

When looking at todays magazine articles and projects on Internet, I see that hams are now using microcontrollers (PIC etc) for projects where they would have chosen hardware solutions 5 years ago. While microcontrollers with similar facilities were widely available in those days as well.

So it looks like there is some more experimentation going on at this level. In fact, I see APRS trackers like the TinyTrak that are close to what I need, but not quite. And are released without source.

As I have quite some experience with software development for the Z80, and TNCs resting on the shelf, it looks like a good use for one of them.

In fact the project can be done with UI frames, so I probably will go for the adapt-K3MC-kiss-firmware way. A more complete firmware with AX.25 connection support would have been nice, but adapting "the firmware" and designing a suitable API (with many functions) probably isn't worth the trouble.

Rob

Looks like I cut away the wrong line.

BTW, did you have some luck with that EPROM?
Here, the whole project has been postponed a little bit because my ADSL connection has finally been brought up by the telco, so I am doing some work on the reconfiguration of my gateway box :-)

TNC2 firmware TF2.7 with SLIP support and a Win modem driver (to operate
tcp/ip via Packet Radio similarly to a phone modem dial-up network) are
available from EB7CJO's website
http://www.qsl.net/eb7cjo/
Select "TCP/IP", then "Programas de TCP/IP", then search for "WinTFS 1.5".
Works great in my TNC2H both under Win9x and Win2000.
Even the "getip" procedure of DL1GIJ's (X)net digi software (
http://www.qsl.net/dl1gji/) is supported. Which means I'm getting an IP
address from the digi when setting up the link.

Has anyone subscribing to this news group had any programming
experience using Goran's software with the subject
Tranceiver/receiver?
I have attempted external programming (called Cloning) using software,
recommended cable assemblies, etc. with no valid results.
Would like to have conversation with someone who has had success as
I'm obviously doing something wrong.

No plans to buy a replcement eprom programmer.
Can't do anything further on the TNC2 firmware project

without a working eprom programmer :-)
Too many other radio projects right now, so my "hobby funds"
are being used for antennas and feedline and stuff like that.

Also several software projects, but these are not ham radio related.

I noticed Timewave has a new mod that will let the
PK-232 do PSK-31. The mod looked great but I have
no idea what software you use with the PK-232 to
support PSK-31 operation.

Anyone tried the mod?

Hi:

As I understand it, all it does is let the same com port that keys the radio for the modes supported by the TNC to key the radio when running any of the normal PSK31 software. That is it doesn't decode/encode PSK31, it just gives double duty for the com port and saves a cable.

Dick,

The PkTerm for Windows software supports this mod directly. You to route the sound card audio through the TNC, as well as use the TNC for keying the radio in PSK-31 mode (as well as the other modes the PK-232 supports).

Details at http://www.cssincorp.com/pkterm.

Rick - W4PC

John,
T-R keying is one of the functions of the new PK-232 upgrade. Dual transformer isolation of sound card audio is another, as is software-controlled switching between the sound card modems (e.g., PSK-31) and the internal PK-232 modems (e.g., pactor). One cable assembly connects the sound card and the PK-232. Only one cable assembly is required to connect the PK-232 to the radio for both the sound card modems and the internal PK-232 modems. For more details, check our website at http://timewave.com/PK232PSKupg.html. In particular, take a look at the PK-232/PSK connection block diagram.

Thank you,
Randy Gawtry, K0CBH
Timewave Technology Inc.

Hello everyone,
I know that this is not really the group where I should
be posting this, but all the other newsgroups are either
blank or do not exist.
I thought that there would be other people like myself
that besides owning Kenwoods, Icons, and Yaesu's,
they would probably own other radios like a Zenith T.O.,
either for collecting them or using them as I do my.
The schematics I downloaded off one site where so badly
scanned in that it is almost impossible to read the values
or components numbers unless you read it directly off the
computer screen. Even at the highest resolution I can print at,
the schematics are still very unreadable. I'm asking anyone

out there for a good clean copy of only the schematics
before I resort to my last choice which is to pay a chunk of
money for copies from one of these other sites that sells them.
If you have access to these schematics, please contact me at my email
address: joet@bellsouth.net, or any info you can forward
on where to get good sharp copies would be appreciated.
Having a bit a trouble with my T.O. since BC, and all SW bands
are dead. This seems to be a problem that this series of radio
suffered with. I hate to say it, but Zenith took a radio with a
good history and reputation and buried it right into the ground.

Thanks for reading this.

73's
Joe

What you could do is swap the faulty address line with the highest-order one. Of course you would need a small program to prepare the file to be burnt to this new configuration.

(years ago I designed a small board that had an EPROM on it, and simplified the layout a lot by wiring the A and D bits "randomly". I had a dedicated program to compensate for that before burning the EPROM :-)

Rob

It's not one address line, it is all of them above 1024 :-(
It's not one part at fault but several.
I'll get back to that project eventually.

FS: JRC NRD-535D HF Receiver with the following options installed:

CGD-135 High Stability Option
CFL-218A 1.8kHz Filter
CFL-233 1.0kHz filter
CFL-232 500Hz filter
Also has Bandwidth Control and ECSS options installed as well
(standard on 535D).

Asking $700US plus shipping.   Also have matching NVA-319
Speaker--will sell with radio for $75 plus shipping. Also JRC ST-3
headphones--will sell with radio for $50US plus shipping.

If you buy the entire setup the price is $800US plus shipping. ($25
discount).

Please respond to wampus@nc.rr.com.

Greatings dear Sir's.

I see something in the question asked by VK4OC, as a problem, and perhaps misguided by the answar of VK5KRJ.

After introduction of the 2000-xx and 2001-xx versions of AGW-PE, Win95 is not longer supported. Lowest OS supported is Win98/Win98SE. Special drivers needed for Win2000. Not tested by me yet on Win/ME, but should not give any problems.

Allways try out SV2AGW's homepage for latest versions, and lot of tips and FAQ's on the AGW-newsgroup.

Recommanded is also the brilliant DIGIPLEX, made by LU7DID. Still under development, but allready now (before ver. 1) show it's strength into the world of 32-bit envioment.

If you're lucky to have an second Pc running in your LAN, TF2AGW support LAN-operated packet, so you may use any Pc in LAN, even if no modem connected to the specific Pc. This gives a great flexability. When comming that far, use the simple soundcard-connection, and run two ports, from 300 bd to 9k6 bd in independent speed. Add to this two standard TNC's, to your COM-ports, and you're on the air, with four ports ! The problem in this, is getting all the radios, and not connection of the modems, hi. AGW-PE is an exelent choice, and I hope more programmers may direct their eyes in range of the AGW.

Evne now, the AGW-PE may be used with sevel programes, like FBB, TstHWin and Winpack. I have seen other terminal programs too, but theese is tested, and found running very well here at my QTH. I know, other programs is availabe, but I can't recommand them, because I not yet have tested them. But that should not keep you from do some test yourself.

-By the way, Dennis (VK4OC): Batchfiles _is_ history. In Win/ME common DOS-applications wont run, if keystrokes is needed, and Microsoft did say for a few years ago "We no longer support MS-DOS or Windows 3.xx". Personaly I belive, MS-DOS and 16-bit went same way as the 80486 series of computers; Dead. But I still use MS-DOS and Windows 3.11 on my old /P, so it's not the same as judge it as "useless". Just don't expect official support availabe for thoose "good old" systems.

Vy 73 de OZ1DWF, Leif

Subject: Re: Mischievous Floppy Drv

Hello all,

I'm just wondering if G4NHC's problem could be due to an old BIOS?

My computer (1994 AMIBIOS) was doing fine until the afternoon of 1/1/00, when it suddenly crashed on me while running a "Y2k fix" program. All subsequent attempts to boot that motherboard failed, so the only fix was a replacement motherboard of the same type.

Now, every time I boot this one it reports something strange. Sometimes it will say there is "FDC failure", or it will move the COM1, COM2 and LPT1 addresses around. Sometimes it pretends to be a machine with no com ports at all. I just ahve to keep rebooting it until the config comes right. (and no, there's not a problem with the battery).

Once I'd got it booted, it would usually work OK. However, this year the floopy drives have been playing up.... The 1.2 and 1.44 Mb drives work OK in DOS, except that the 1.44 will no longer read/write 720k floppies. But in Windows95 neither drive will work at all. This is not intermittent, it's permanent.

I'm wondering if the BIOS can't properly deal with dates after 1999 ??? Someone suggested that the "century bit" overflows into some other field, but I don't know how true this is. The PC is just a tool and I can't waste time or risk my work fiddling with it.

Perhaps G4NHC could boot the PC into proper dos isntead of windoze,and see
if there is any difference in the behaviour of the floppie?

73, Paula

Hi Paula,

One way to prove/disprove it is a Y2K problem overflow problem, would be
to set the date up in the BIOS, to sometime before 2000.

Hi Everyone,
I like many I am sure am confused by many terms used in computing.

Can anyone explain the following in simple terms please.

1/ What are RESOURCES and how do they affect the computer running ?
2/ What is PAGE FILE and what is it used for ?
3/ What is VIRTUAL MEMORY and what is it used for ?
4/ What and where is SWAP FILE and what does it do and used for ?
5/ What is S.M.A.R.T. as found in the Bios setup ?

Thanks in advance I am sure many people would be interested in the replies so please as a BULL

Cheers

I'm trying to repair my 20Mhz Multifunction Waveform Synthesizer
from a company named ANALOGIC model 2030A .

I don't have a service/technical manual of it and
the analog card has a failure; also I suspect one of the
two switching power supply .
Who can help me in providing me a copy of the drawing of this
part ?

Many thanks for your help

Best regards .

G6HJP wrote:-
> Well FCR missed this message!!! It was not killed and went via him as
> well!!

Well it just goes to show that YOU didn't read the message I sent out did you!!

Read it again!!

I stated that....

ALL MESSAGES ENTERED DIRECTLY ON TO GB7FCR MUST BE IN ENGLISH!

As you can see from the R:Lines that you actually quoted the message was NOT entered directly on to gb7fcr but came in via several other systems.

ALL I am bothered about is mail entered directly on to my system by users of my system from outside of the UK via TELNET Links to my system.

As MY system would be the one that took the blame if anything unsavoury was to be released on to the network. to prevent that from happening is quite
simple post in English or don't post on my system at all..

as I am not willing to risk MY nov by releasing material I can not read, If the users of my system from outside the UK don't like the rules they have the freedom of choice to go to other systems, BUT it seems they are all quite happy with the way I choose to run MY system via the Internet links I provide for them..

Unlike a minority of people in the UK these users from outside the UK APPRECIATE the service that has been provided for them and I don't see them complaining about the simple rules I set out at the start...

> Just goes to show how silly people can get when given a few simple
> rules!!

No it just goes to show that YOU don't read / UNDERSTAND the messages that

were sent out.. READ IT AGAIN it very clearly states what I have just said again!! Then perhaps it may sink in with you...

(but I have my doubts on that one)

As I said NOT entered directly in to gb7fcr..

> > All messages must be in English.
>
> Tout en Anglais? Ma foi!! Did I just break the laws of the UK?
> Bob VK6BE.

Nope because I could understand what you said and also this message didn't
come directly from your system in to mine...

OK it was imported in to the UK by my system BUT it was held for review I
read it and released it simple as that, if the message had contained a
message in a language I couldn't have read then YES it would have been
deleted here simple as that!

I am not prepared to risk loosing the NOV to run this bbs end of story..

Subject   : Loss of Int/Expl'r Icon.

From: G0TCM@GB7BED.#21.GBR.EU
To : HELP@GBR

Hello packeteers, again,
Have just noticed that I have lost the Internet Explorer Icon from the Task Bar, next to the 'START' button..........how do I get it back?.

Am using Win98.

Regards.

73 - FRED - G0TCM @ GB7BED.#21.GBR.EU

             !      !
 N -----------------
```

When on the stand the mains is fed to the iron is halfwave only for economizer, (1/2 power), the iron rest on a suitably mounted stand micro switch that disconnects one of the bridge diodes. When the iron is picked up, full wave is restored for (normal power).

An added non locking press button switch on the iron, this boosts the power by connecting a 10uF with a 22R in series (47uF/10R for 60W) housed in the stand (iron not earthed 3 core cable!), resulting in approx 300V peak DC from the mains being used for high power. This is approx 2x the normal power, hence the non locking press switch!

A neon (with series 220K) across iron can be used to indicate the power status.

73 De John, G8MNY @ GB7CIP

By G8MNY

Calculate 1/4 wave lengths of 75� coax using the coax's velocity factor & the wave length for your frequency of interest. None of this is too critical unless above 1GHz, where cable Z change if you bend them & cutting to length is more of an art, so the use of a solid power slitter is more common.

Decide which harness design you want:-

```
        Join     Tee == to aerial                 tee ========#== to aerial
50� =======<��������[    2x 50�      OR   50� =======[ 2x75�      2x 50�
              37�    == to aerial                     ========#== to aerial
            (2x75�)
```

eg both matching lines in a single feed plug (or socket) & an aerial plug (or socket) with a aerial T connector. Or use the matching lines as the T with 3 plugs (or sockets). The latter is mechanically less strong, & waterproofing may be more difficult. Alternatively you could splice in the matching sections, but again waterproofing can be a problem.

Use good quality 75� cable with heavy braid. You should find that 2 coxes can be made to fit N connectors with some difficulty. Use silicon rubber or grease to seal/fill connectors once tested.

Testing can be done with a sensitive SWR meter a 1W rig & 2x small 47� resistors (with minium leads) mounted one the ends of the lines to simulate the 2 aerials. This should prove the cut lengths are OK before you terminate the aerial ends.

The Aerials must be identical types (no early/later multibeam type mix). And mounted so that the connections feed the same side of the driven aerial element to be in phase. If the aerials are mirror images (one upside down) and the element cannot be rotated, then add 1/2 wave length (x Velocity factor) to one of the 50� aerial feeders. The two aerial feed coaxes between the spliter & aerials must be identical lenths & type.

Aerial spacing, is variable, the manufacturers data may help, but a good guide is about half the boom length. This rule of thumb, makes sure the aerials capture areas do not overlap. Closer stacking/baying, gives variable results as all the aerial elements will couple, & this will result in a different polar diagram/gains than optimin. But closely mounted aerials with high gains are possable, if difficult to get the distance right!

This is a simple SCR controlled charger. I made it to give 27.5V at 15A for charging a train carrage's 500 AH 24V battery system.
Using a dual winding transformer or a single one with 2 other diodes so the SCRs form part of a bridge... Or 1 SCR arm following a bridge rectifier.

                        !        ---         !     !    !10uF  !
                        !         !          !     !    !      !
         -VE ret   ---------------------------------------\/\/---- Batt return
                                                       SHUNT
```

The Zener can be 5-10V (12v system). Both transistors are NPN. Set the voltage pot so that the Zener action is 1V higher than the required Battery voltage.

Make the shunt resistor (thick wire link eg a few inches of coat hanger) so at the maximum current the 2nd NPN conducts to limit the trigger voltage & hence the current. The transformer must deliver an RMS voltage slightly greater than the battery voltage. If too low Triggering can be difficult, but a 2nd 2v winding feeding the trigger circuit can keep the unit working well on low mains (train PSU's problem <200V AC at times).

This circuit is very efficient, only the transformer heats up with the high pulse current, & SCR losses, no half power lost in dropper regulator! So a thermal trip is recomened on the transformer.

For recharging 12V batterys use 14.5V, for float (infinate charge rate) use 13.8V, with sealed types use 13.5V.

==
I know this won't have much to do the most members of this group, but just to let you all know.

Some low life bastard has stolen the VE7RNL-10 Digipeater from Slocan Ridge near Nelson B.C. Canada.

Missing are a Motorola MCX-100 radio, Mike, Speaker and a Kantronics KPC-3+
TNC Serial # 11K01-07690.   I have no serial number for the radio, but it
has all ham frequencies programed in it. The frequencies are:

Ch.1.145.01, Ch2. 145.05, Ch3. 145.07, Ch4. 145.75, Ch5. 145.79, Ch6.
145.80-, Ch7. 145.84-, Ch8. 146.64-, Ch9. 146.52, Ch10. 146.80-, Ch11.
146.94-, Ch12. 147.16+, Ch13. 144.39, Ch14. 145.985, Ch15. 145.09, Ch16.
146.62-

I don't think there are too many MCX-100's with these same frequencies.
They can only be changed by reprograming the EPROM and you have to have the
software to do it.

David,
First question that comes to mind is is the rig switching from RX to TX? If it is then all he need to do is adjust the audio out via the audio controls in ME., and make sure that the right wire is hooked to the right I/O connections. TX audio needs to be hooked up to speaker out RX to line in or MIC input . If it is hooked up wrong it might still RX FB but the audio will not get to the rig.

If not then there are a couple of things to check. First would be to make sure the com port is enabled in the PSK/digital software. No software I have used will automatically enable the comport (and I have used 9 or more PSK digital software). Next would be to check the keying. In most software you have to figure out wheather you are using RTS or DTR keying. In all cases I just check the both if that option is available. If not switching then he needs to go to system in Control panel and see if there is a conflict on the comport and resolve it there if there is. It may take some playing with the com port to figure out which one is the right number.

I had a couple of problems with ME as well but got them figured out. It seems to runn all of the digital SC software I am using now (Hamscope v.1.4. IZ8BLY's HELL v 3.8, Digipan v1.6, MMSSTV v1.04 and WSJT (HSMS SOFT) v 1.0.0. this is all I have checked out in the last week).
Good Luck to your Friend and feel free to Email me for any other help you might need using the digital software and ME

I recently installed a mobile APRS station in my truck, however I am have problems with alternator noise on my transmit audio. I have both the radio and the tracking unit attached to the second set of terminals on the battery as well as raping the power cords in a RF-Choke device with out any effect. My next idea is to install a large capacitor between the power leads. Any other ideas how I can resolve this issue? The alternator noise apers to be coming from the tracking unit because no noise is present when I use the hand mike to key the radio. Any ideas.

Go to the Rigblaster site and look for software called "port fix" or
something of that type of name. It is the Windoze ME that is causing the
problem by taking the port to the wrong state. The software runs when you
boot up the computer and sets the port to the proper state.

> It is the Windoze ME that is causing the
> problem by taking the port to the wrong state.

This problem is caused because Windows ME, like all the Windows operating systems, sets the port's controls during boot up. Unlike the other OS's, ME fails to reset the controls when it is finished. The software you described resets the controls for you after boot up.

The symptoms of this problem is that the transmitter is keyed when the computer boots and stays keyed until you run the PSK31 or other communications program. It will not cause the described problem of no transmission.

The first thing to do is determine if the non-transmission is caused by the PTT line not being keyed or if it is lack of audio drive from the sound card to the transmitter. You can look to see that the Tx indicator (if there is one) indicates the transceiver is in transmit mode or you could force it into transmit mode with a manual switch and look for output. Two things need to happen to get output: The transceiver needs to be in transmit mode and the sound card needs to be sending sufficient audio to the transmitter.

Don't wire the power supply leads of the tracking unit directly to the
battery. Connect them (or at least the ground) to the transceiver.

When there is a shielded wire between tracking unit and transceiver, and
the shield has enough copper in it, and at the transceiver end it is
connected to a firm ground (not the "neutral" wire of a mike connector),
omit the wire between battery - and the tracking unit.

The Icom 706 is the best 6 meter rig available.

It has Subaudible tone encode and decode built in

Also, I found out that the hustler mobile antenna resonates exactly in the middle of the 6 meter band with no coil installed.

Have fun.

Hi folks

I hope I'm not intruding, if I am I apologize.

I have two problems - they are an identical installation.
I will describe the setup (same for both systems).

Kantronics kpc3 modem (the model before the 'plus' version) with a maxon transceiver (a radio made in Australia I think?). I do a reset to factory defaults (restore d), change my terminal to the baud rate I want and type in the following commands to set the kantronics to the following:

```
CONMODE TRANS
ECHO OFF
FLOW OFF
XFLOW ON
TXFLOW ON
CD SOFTWARE
HID OFF
MBEACON OFF
FULLDUP OFF
CANPAC $00
CANLINE $00
COM $2B
MYCALL 1001
CHECK 12
AUTOLF OFF
```

```
LFSUP OFF
LFADD OFF
CR ON
```

In the office the local kantronics is connected to a PC with radio and yagi antenna on the roof. The remote site has an rs232 device with kantronics, radio and yagi antenna. The units are lines of site about two miles apart. If I turn both ends on and off, I can sit at the local modem and connect and disconnect over and over without a problem. for example:

1. I type: CON 1002
2. I get a successful connect message.
3. I get the welcome message from my remote device.
4. I type: HEY REMOTE DEVICE WHAT'S UP?
5. I get the reply: GREAT THANKS LOCAL UNIT, EVERY THING IS COOL.
6. I type: +++ (pause, get cmd: prompt) DIS.
7. Then the connection hangs up.

However, if I only do steps 1 to 5, and come back ten minutes later, I cannot restart a connection with the remote modem. It is impossible. The ONLY way I can get the connection to work again is to turn the remote end on and off. That's is my problem. It is the same for both of my installations (cities apart) CAN ANYBODY HELP ME?!

Have any of you guys had that problem before?

Please tell me all the things I should test/check.

What (if any) setting are wrong?

I'd appreciate any help! To reply via email please change my return domain to bigpond. Thanks folks and have a great weekend!

bye!
flippit

the 706 is a multi mode multi band rig. So its not just a 6 meter rig. I think he is looking for just a 6. But If i was going to buy something it prob would be the 706MKII with dsp good deals great rig. Who the hell needs 440.

I just did a new install of a Kenwood TM-D700A and I am getting alternator noise on receive coming from the external speaker. The control unit is mounted in the trunk, (car battery is also in trunk) and the control head and speaker is located up front. There is no alternator noise on transmit, but I can hear the whine on the speaker when I drive.

Any ideas on how to correct this? Will toroids cores wrap on the speaker wire help?

Thanks.

Herb

good luck using a 706 for sat work. its prob the worst rig you could use for that. You should use the right tools for the right job.

You should get in the habit of sending a disconnect request and receiving acknowledgment at the end of the exchange before walking away.

I'm not intimately familiar with Kantronics, but there should be link time-out parameters, so if there is nothing sent for several minutes both the units will initiate disconnect request, then terminate the link after retry out.

If you are looking for a more permanent link, look into commercial data solutions.

I just ordered an ICOM 706. Earlier I had found a vendor selling a complete PS-31 kit for $25 for my rig. I found it on the web but cannot remember the address. This vendor sells the kit for many rigs. Does anyone know the web address?

Here is what IMHO is the best site. I have the Rascal Kit and its flawless.

Good Morning,
I've delivered the following Matlab implementation of a QPSK
modulator, to test it I also arrange a
simple QPSK demodulator, the problems I have are the following :

1) For the noise introduced by the channel I use the relations

```
     SNR_x_bit_dB = 6 ;
     SNR_dB = SNR_x_bit_dB -10*log10(0.5) - 10*log10(f_clk / (data_rate)) ;
      QPSK_et_noise = awgn( (QPSK_I + QPSK_Q) , SNR_dB, 'measured' , [],'dB' );
```

I'm not sure about these, especially for the second one, could you confirm to me it's validity ?? In the simulation I found   BER = 0.01234 while the theoretical one is   BER = 0.00238829

2) The same following code could work also for data rate of 82.5Mbps or 110Mbps but respect to the same simulation at 55Mbps the result are really bad, for example having SNR_x_bit_dB = 6 I have
BER = 0.0354462 at 82.5Mbps and BER = 0.079483 at 110Mbps.
How you explain this ??

3) When the noise grows it is normal I think that the eye close, if you run the following code you'll see the eye diagram at the output of the SRRC filter that isreally dirty, you think is normal for a SNR_x_bit = 6dB ??

4) I use to demap the Matlab function demodmap :
`simboli = demodmap(data_rx , [symbol_rate 0] , f_clk , 'qask', 4) ;`
this is a 4-PSK demodulator and it's equivalent to a 4-QAM demodulator but why these two matlab constellations have a phase difference of pi/4 ??
For the 4-PSK in fact the constellation that matlab expect have all symbols on the axis. Why this ?? How can I use 4-PSK demap ??

And finally here it is the Matlab code, I hope you'll test it and suggest me how to solve these problems and enhance it. Thanks ...

Antonio D'Ottavio

I noticed, that the new version of SkySweeper is now released
(www.skyweep.com)

At least there are MFSK16 (RX & TX) and Pactor-1 as new modes.
It also seems, that MFSK16 will work fully in demo mode.

Hey,
I hope my question will seem easy for most of you...
Is it possible to send 8 bits of data using TAPR? I use a TNC2H from Symek
with TAPR 1.1.8, and I can't transmit 8 bits of data. I set AWLEN to 8,
8BITCONV to ON, PARITY to 2 (that's for NONE), I set the serial port to be 8
bit-no parity, and even that way when I send a character what I get on the
other side has the most significant bit that represents the parity. So I was
just wondering whether it is possible to use the 8th bit for data, and in
that case what should I do to get rid of the parity bit.
Thanks for your help.

Yoann

Sounds like a good Christian radio show. What channel do they carry it
on?

http://www.halturnershow.com I think they call it "balance".
My recollections are of one black acquaintance of mine who had
a saying; "There's only two kinds of women in the world:
Whores and Bitches... There ain't no other kind."

Never mind that all the hookers in town gave their money to
people just like him so they could keep themselves in hi-heels,
and Heroin.

Reminds me of another saying; "Take my wife... PLEASE!"

If it were OK to kill the messenger, all reporters would be dead.

```

For an experiment I would like to construct a self-contained box that includes packet radio capabilities and can run a small application that gets data from the serial port and sends it on packet (not 1:1 but with some custom handling).

Of course I could build something from the ground up, but I have some old TNC2C boxes that I can use. What I am looking for is a firmware version that would have some API and some space in the EPROM, so I only need to write an application and can call functions in the existing firmware to send and receive data and packets.

Ideally, the firmware would support the download of an application in the battery backed-up RAM, so development would be a bit simpler. I do have Z-80 assemblers and C-compilers and I do have some code that supports downloading code into RAM, but it would save a lot of time when I would not have to combine all bits and pieces (e.g. from TF 2.7 sources or from the K3MC KISS code) into a special EPROM for this.

Has anyone ever seen something like this?

Rob

Rob,
this is an interesting request!

I was just last week looking at exactly the same situation.

Have the cross compiler, linker, etc. and have looked at TF 2.7, early TAPR, and K3MC KISS sources. Went as far as to make some small changes to the KISS source and burn an eprom to make sure everything is working. Found out my eprom burner has a bad address line, and will only program the first 1024 bytes correctly (frown).

Seemed to me that modifications of the KISS code would be simplest. One might add a loader function to load and run code in RAM for testing.

Started work on that code ... but now I need to find a new programmer.

I already searched using Google and wondered why apparently nobody
did this before :-)

I have no EPROM burner at all, that is why downloading of code would
be convenient (of course I can find someone who can program an EPROM,
but using his services for every try of the code would be a bit too much)

>Seemed to me that modifications of the KISS code would be
>simplest. One might add a loader function to load and run code

Of course when working on the KISS code base one has no AX.25 code at
all, only the channel access and HDLC.  This will mean the use of UI
frames is easiest, or an AX.25 state machine could be borrowed from
NET or NOS.  Or maybe even use IP over AX.25 UI frames.  But you are
right, interfacing to that code looks a lot simpler than learning the
structure of TF 2.7 and providing it with interface hooks.

With the K3MC code there is also a HEX loader that I mentioned, maybe
a good idea is to merge these two and have an EPROM that has routines
to send and receive frames, to read and write buffered async data, and
to have some mode that allows loading of an application immediately after
powerup and running the already resident application after a checksum
or crc check determines it is valid and no download sequence is detected.

I recently bought for $10 an IBM Thinkpad 750 laptop at a hamfest. I bought it for operating digital modes (PSK-31, RTTY, etc.).

It is a 50 MHz 486 wtih 8MB of RAM, 350 MB of hard drive space, and a mono display. One of my fellow club members thinks that I need at least a low-end Pentium. Should I keep this laptop or get rid of it? If I should get rid of it, how much can it fetch?

If it has a sound card it should work psk31. I used a 486dx/2 desktop and it ran the origional psk31 program under windows 3.11. It only had 8 meg of ram .

Go here for some programs and the requirements to run them.

http://www.muenster.de/%7Ewelp/sb.htm

I doubt that you can run any of the win 95 and 98 programs on it but it should run the win 3.1 and dos programs.

I wonder if some other Kenwood TS870 users have the same "problem". When using the ACc socket to do Packet, The Power output meter of the 870 only shows 10W output when in fact it is running output at 100W in the external Watt meter. The meter does however work fine when using the microphone on any modes.

This might be cosmetic but still is a concern? Please also email me with your feedback at willemma@intekom.co.za

I am looking for an IC that can generate binary numbers, up to FFF by pressing a momentary spst, have the chip start at 0000 0000 0000, and end at 1111 1111 1111.
eg, 0000 0000 0000, 0000 0000 0001, 0000 0000 0010, 0000 0000 0011... etc if anyone knows of such a device(s) and or schematics that can get me to this desired effect with multiple components id be forever gratefull... thanks , Joe

4040 plus some circuitry to create a nice clockpulse
(e.g. s/r ff using 4011 or 4093)

I'm a relatively new ham, only got licensed a few months ago, and I've got some questions about PSK31. I've heard a lot about PSK31, but I haven't had these questions answered.

First, my laptop that I'm probably going to use for PSK31 and other digital modes is a Dell Latitude XPi - a basic, 120 mHz Pentium I machine that's been maxed out on RAM - 100 mB I think. It runs Win 95, but doesn't have an inboard sound card. A while ago, I bought an Altec-Lansing outboard CD player and sound card unit for it...that's what I'll be using for PSK. Will this setup work running DigiPan or something similar? I've heard endless things about laptops with internal sound cards, but never with external ones.

Second, for right now, I only have my Tech license, so I'll probably be on 6 meters for PSK31. Is there any 6 meter PSK31 activity? 2 meter?

Thanks for any help.

If you want to get rid of it (and it works), I will buy it from you.

If you can run the soundcard on Windows with simultaneous recording a file from the line input and playing just another wav or midi file on the line-out/speaker-out it should do fine for PSK-modes. The PSK-progs running windoze just use the windows sound-routines.

```

Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate audience, below is a list of the rec.radio newsgroups. In most cases, a group's name will explain its purpose. Cross-posting should rarely be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
                            built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
                          restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any amateur topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefaced
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-running thread results from a single cross-posted article, and its content drifts further and further away from being "on-topic" in the various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups" posted on the 15th of each month.

Am not quite sure whether I understood your question. Maybe this helps:
There exists a special TNC2 firmware with SLIP support.
There is also a Windows driver addressing the TNC like a modem.
Have tested the whole thing under Win98SE and Win2000 to do tcp/ip via Packet. Was able to use applications like MSIE and Outlook Express successfully over this link.
Don't think firmware and driver are available on the net, but I have it on a CD at home.
Let me know if you are interested.

The CD4040 (and high-speed variants such as the 74HC4040, 74HCT4040, 74LV4040, 74VHC4040, etc. - though you won't need high speed to keep up with a pushbutton) is made to order for your application. In addition to the counter, you'll need a flip-flop to debounce the pushbutton; circuits for that have been widely published. The total cost for the ICs is under $2.00. The IC outputs can supply enough current to drive high-efficiency LEDs directly, if visual output is what you have in mind.

The alternative overkill method would be to use a microcontroller IC such as the PIC 16F84. Only one IC, but it costs more than the two ICs in the other method. But you might be able to roll additional parts of your circuit design into the microcontroller if you use one with more I/O pins. (An 18 pin part like the 16F84 has just enough for your application.)

as long as it communicates through windows and works with the windows audio controlds it should. you may only be able to run the single channel RX in digipan v1.6 though. Or an older version of digipan.

>Second, for right now, I only have my Tech license, so I'll probably

Yes although this is coming into the season where the bandopenings will be few and far between you can find PSK on 50.290 USB. You can look on 2 mtrs around 144.140. You will find more HSMS (high Speed Meteor Scatter) using a new freeware program called WSJT this time of year around 144.110-144.135 and 50.270 -275. listen fro the pings and that will be WSJT or one of the other

HSMS modes.

>Thanks for any help.
>
>

I hope this has help to answer your questions and hope to catch you on PSK on 6 mtrs soon 73 and all the best

```

Greg,

I believe that if you issue the TNC a reset command, it will restore it to all the default settings.

Regards,

Duffy

I apologize up front for being complete naievely and inexperienced.
Because what I'm asking about isn't commonplace I assume there must be
a theoretical flaw with it, and I don't understand the theory enough
to know what it is. Thanks goes to the kind soul who can clear me up
on this. Here's my question:

How come we need high frequencies (eg gz) to transmit data (eg mz)?
Why can't one encode one bit of data on one cycle of a carrier wave --
or even multiple bits on a single wave?

For example, couldn't one takes four bits and uses a FM scheme to map
them to 100 - 115 mz, yeilding a throughput of roughly 400 megabits
per second? (Ok, so I have no knowledge of licensing or practicalities
of choosing one frequency over another, but theoretically speaking...)

Also, I'd be delighted for URLs of websites which can help a curious
novice like me along my trek of RF-electronics comprehension.

john

John:

Bandwidth alone does not limit communications speeds. If there is no noise, one can signal at any rate approaching infinity...

The simplist general relationship you are looking for involves both bandwidth W and signal to noise ratio SNR.

The late Claude Shannon proved, way back in 1948, that the theoretical error free capacity C of an additive white Gaussian noise channel of bandwidth W Hz and signal to noise ratio SNR is:

$$C = W \log(1 + SNR)$$

Where:

-log is logarithim to the base 2
-C is error free capacity in bits per second
-W is bandwidth in Hz
-SNR is the signal to noise ratio, a power ratio.

For example for a 3 kHz wide channel with SNR of 30dB, this works out to be approximately 30,000 bps.

Clearly the theoretical number of bits per second per Hz of bandwidth is C/W:

$C/W = \log(1 + SNR)$ bps/Hz -- C/W can be called the bandwidth efficiency...

Shannon's formula was arrived at by a mathematical proof and was not a "constructive proof", and it took modem designers around the world over 30 years of research, discovery, inventions, patents, etc... to discover and find modulation formats and codes to even come close to Shannon's predictions. Today the most advanced techniques using trellis coded modulation with turbo codes comes within a dB or so of reaching Shannon's limit.

When Shannon wrote his famous formula back in 1948 the extant communications efficiency at that time (circa 1950) was only about 1/10 to 1/5 bps/Hz! A long way from what Shannon predicted. And many laughed at his mathematical prediction as being an impractical goal.

The most bandwidth efficient systems in practical use today are the analog voice band modems used for computer communications over telephone lines, e.g. V.42 (circa 1992) or V.90 modems which reach 28.8kbps in a 3kHz channel at about 30dB SNR. These marvelous modern $99.00 devices achieve approximately 10 bps/Hz of bandwidth. To reach this communications efficiency they use advanced trellis coded modulation and consume approximately 30 - 50 million multiply-add computing operations per second.

Of course the HF channel has a lot more impariments than just linear bandwidth limitations and additive white Gaussian noise and so it is more difficult to signal over the HF channel than the simpler telephone channel.

Today's HF ham band modems do not achieve anything near the 10bps/Hz of modern telephone line modems, and so amateur radio HF data communications still has a long way to go in terms of bandwidth efficiency to reach the current levels of performance of $99 voice band data modems.

Still and all...10bps/Hz would be a good bandwidth efficiency goal for HF data modem designers... and there is still lots of room for invention and discovery to move towards this. The problem facing amateur radio HF data enthusiasts is these technology advances cost time and money and the market size for HF data modems is simply too small to support such R&D investments.

Any help gratefully rcvd.
I have done the conversion to two ex ambulance radios... both now working on
2m and very clean... but.. they have 12.5Khz filters in them and can't find
any wider ones.. Also need to look at the soundcard interface to get them
working on 9K6..
Someone must have done this before??

Any FAQ files or howto files or sources of filters?

Regards
Bob

Depending upon what radio one uses, one of the signals sent from the radio the KPC3 is the receiver unsquelched.

Find a pinout diagram of the data cable to the radio, and tie the pin either high or low dependant upon what logic level the KPC3 wants to see for a squelched receiver. I don't know if this will affect the receive side by making it interpret there is no signal present but, this might work.

Folks,

Still loosing hair over this one, but I have played around a bit more... Since my original post, I've tried the TH-77a with three other TNCs, all behaving in the same manner. I borrowed a TH-225a from a fellow ham and connected it up to my TNC/wiring combo (the TH-77a and TH-225a are wired exactly the same) and it worked flawlessly. There must be something weird with the TH-77a. Does anybody know if I can put an op-amp on the output audio to boost the signal? Am I getting myself in trouble with SNR if I do this? Any other ideas am I missing something stupid, like some sort of poweron sequence which tells the rig to reduce audio out?

I've written Kenwood to ask if they know of this problem, but I don't expect to ever hear from them :(

Thanks and 73,

Mark

I forgot to mention one other key piece of information, I have tested the
TH-77a with a speaker mic and it works fine.

73,

Mark

Interesting situation here...

As of the time I am posting this, N1RZB had received a total of eight responses to his inquiry, and not one of them had anything to do with answering his question! Instead of helping the guy, everyone gripes and whines about cross-posting!

Yeah, I know that there are both written and unwritten rules of "netiquette", and perhaps N1RZB shouldn't have posted his query to some of the groups that he did post to. But perhaps we need to take a closer look at this. What's happened to the hobby? What's happened to hams being helpful to each other? Instead of getting an answer to his question, all he gets is bitched at by a bunch of self-appointed "interenet cops". We keep hearing that ham radio is "dying out". It's no wonder! When someone can't get a straight answer to a valid ham radio question, or get ANY answer in this case, it ain't hard to see why people aren't sticking with the hobby. I've heard it said that the internet is killing ham radio. This is a perfect example!

I wish I *could* give this gentleman an answer, but I really have no personal experience with six meters. I'm sure I'll be flamed for cross-posting this message, and for being one of the people who isn't giving the guy any help. At least I'm WILLING to help... I'm just not ABLE to help.

I thought someone told him that it was better to just buy an HF rig
that had 6 meters on it, costs about the same. That is as good advice as
I could give him.

I've been looking at the new RCI 5054 (over Internet not in person yet) and
thinking
it didn't look like to bad of a deal ($300), I just wish it had the tone board
already
installed and not an 'add on' like it is now.

Hello Eddie, Somewhere along the line some one has put the wrong chip
in that loacation. Replace it with an 8530 and you should be OK.

Thanks John- been searching for an 8530A but not found so far. From
chip spec sources, looks like it should be an 8530B or Z853006 for a 6
mhz part. Digikey lists the part but shows none in stock- BGMicro has
an 8530 which seems to be the number of a 2 mhz part. Still searching.

Unlike you, Dean, I don't have any poignant predictions to make about the future of the hobby, but it is VERY clear what will happen to the newsgroups if people aren't discouraged from cross-posting to ten groups at once. THAT insight doesn't require any soul-searching at all.

What the original poster did was every bit as much a part of "the hobby" as tuning up a 2KW transmitter in the middle of the band without bothering to turn on his receiver first. Crossposting to 10 unrelated groups is an act that could only indicate careless naivete on the part of a newbie, or extreme discourtesy on the part of someone who should know better. A quick check of Mr. Moge's extensive posting history on Deja will reveal which of those two options is most likely to apply here.

Followups set to the appropriate group...

hello all

I recently aquired an AEA PK232 TNC with no manual, Is there a web site for the manufacturer
so I can see if mine is current on the firmware and possibly download or request a manual and possibly get some connection info for a few radio's I want to try it on

Thanks
Steve KC7YNS

AEA basically went out of business a few years back. Timewave got the tnc part of them. I don't think they have manuals for older versions of the hardware. If you order one of the firmware upgrade kits they have, you'll get a new manual.

You might be able to find the firmware date or revision level by popping the case open and looking at the rom chips. The other way would be is if you had the unit up and running (or could take it to someone who has the PCPakratt program running), hook it up to their computer, and read off the firmware info on one of the opening screens.

The hardware manual is a BIT long - email me off group and I'll see if I can help you with individual questions. I have a PK232MBX I purchased back in 1991 that still runs great. Do you have the PK232 or the PK232MBX? There are some differences.

You could. ADSL is a good example.

As long as your have adequate SNR, you can encode as many
bits as you like at once in whatever bandwidth you like.
It's bandwidth *and* SNR that limit what you can do.
Shannon figured that out a long time ago.

In amateur applications we usually have lots of bandwidth but low SNR. Commercial practice is usually the other way around.

I routinely recommend Communication Systems by Haykin as a very accessible introduction to such things.

Steve,

Check out http://www.timewave.com for the hardware, and you can download the demo of Pkterm '99 for Windows 95 and above from http://www.cssincorp.com/pkterm and if you look under help/about after loading it, it'll give you the firmware revision.

Rick - W4PC

Hi Mario

Did U get a reply for some soft ware to run packet using LINUX. If so
did someone send it to you or did they give u an idea where it could be
obtained. I have just install linux myself and would like to try packet
using linux red hat 7.1 . 73 brian vk3eo australia

Try http://www.radio-portal.org
and do a search for Linux.

Best Regards,
Willi, DJ6JZ

In addition to the other response, I'm not certain what inanimate objects ("armatures," which I take to mean towers, poles, and other mounting surfaces for antennas; else it has a nonsense meaning) could do to help. ???

For sale my Phoenix SX 440mHz 2 channel rig. I started the 9k6 baud conversion
over a year ago and never got to finish it.Since packet is dying out here in
W.N.Y. I might as well put it up for sale.This rig can be programed for any 2
freqs,either simplex or repeater.I wired a mic to the outputs on the back of the
rig and it works,so this unit will not be DOA,just the finishing touches for 9k6
baud packet,or un-converted for repeater use.$125.00 plus shipping in U.S.A.
dollars from 14120 zip.
tnx de dave-n2rhl

Unfortunately, the US government has outlawed the sale of radios capable of
receiving cellular phone frequencies. This makes
putting together a suitable radio direction finder a difficult task. It is also
illegal to listen to cellular phone signals, so the legality of
what you propose is also questionable. People have chosen to give up freedom for a
false sense of security.

You are incorrect, George. Possession (and sale) is NOT illegal, although new
manufacture and use of such equipment
is.

I oversimplified things in the above statement. Sales are legal, but manufacture
or importation of such radios is illegal,
effectively making them very difficult to obtain.

Most of those people had PCS phones. Those are all
digital, and 2 GHz range I believe, and you would need
special equipment to monitor for phones. Stuff radio
amateurs are not going to have anymore, now that most
Hams are about as technically capable as CB'ers.

You know what, wo really cares right now if their legal......If you have them,
USE THEM ...This isn't a time to get into legalities & such. I'm not saying go
out & get a scanner, then mod it....but if you have one for whatever reason,
take advantage of it, and try to help the cause.

73's,
Mike

Subject: ARES ASSISTANCE - PLEASE CALL ME

ARES is seeking additional volunteers from the Greater New York City area----to assist in supporting the World Trade Center disaster relief and recovery effort. ARES is assisting the American Red Cross and emergency management officials. New York City-Long Island Section Emergency Coordinator Tom Carrubba says volunteers must have a VHF (2-meter) or, preferably, a VHF/UHF (2-meter/70-cm) mobile radio, power supply, and mobile gain antenna. This is a change from previous requirements. Carrubba says hand-helds have not been sufficient to deal with the difficult operating conditions. Amateurs are working two 12-hour shifts per day, 8 AM to 8 PM and 8 PM to 8 AM, "plus or minus three or four hours, mostly plus." All volunteers must report to American Red Cross Headquarters (address will be provided when you contact me) for credentials and assignments. You must use public transportation to ARC HQ because of limited vehicle access; there is no parking in that area. Amateurs with the necessary equipment and willing

If you can help please contact Steve, K2SO at k2so@arrl.net or (908) 289-6573. Also please help by sending this to other hams in NNJ.

THANKS & 73

73's,
Mike

Hello All,

I have uploaded release of TrueTTY 1.85 at the main site and mirrors:
http://www.dxsoft.com/truetty.zip
http://www.hamport.com/truetty.zip
http://www.hamradio-software.com/truetty.zip

Your feedbacks are welcome!

Best regards,
Sergei mailto:amx2@dxsoft.com
http://www.dxsoft.com

==

Truetty is program for amateur radio digital communications via a sound card. Supported modes are RTTY (Baudot code), ASCII (7 or 8 bits), PSK31 (BPSK and QPSK) and AMTOR-FEC (SITOR-B, NAVTEX). SELFEC SITOR and HF-PACKET (AX25) decoding is possible also. No additional hardware required - you need only transceiver and computer (5x86-133, Pentium-75 or better) with sound card. Optionally you can use simple circuit for PTT-control. It make fast and convenient frequence control, has a lot macros for transmitting. Can cooperate with RZ4AG AALog logger.

==

TrueTTY Versions History

V1.85
Release version. Documentation was update.
"Setup->View->Logarithmic Spectrogram" menu command or Ctrl-Z hotkey switch oscillogram window between linear or logarithmic scale.
To avoid problems with macrosequences, the ']' symbol is treated as word separator in the "Send Whole Word Only" mode.
Minor bug with macro button drawing in system with "large" font was fixed.
V1.83
AFC algorithm was improved for speed above 75 Baud or shift below 85 Hz. This algorithm is used in AMTOR and AX25 modes also.
The "Setup->AFC At Mouse Click" option was made. When is option is selected TrueTTY make fast AFC to near station after mouse click on spectrogram regardless of the "AFC" button state.
The "Send Whole Word Only" option was made. In this mode software

 doesn't start to transmit next word until space symbol or line
 feed is entered.
 New "Beacon" button switch on beacon mode now. In this mode Alt-F12
macro
 is executed periodically. The period is defined by the regulator on
the left
 of the "Beacon" button. The shortcuts for "Beacon" button are Alt-B
and
 Ctrl-B. The macrosequences ~[bon] and `[bon] switch beacon mode on,
 the macrosequences ~[boff] and `[boff] switch beacon mode off.
 The ExCanal parameter of the TRUETTY.INI file defines canal number
 for data exchange via DXSOFTEX.DLL library now.
V1.81
 Filter parameters were changed for better BPSK and QPSK decoding.
V1.78
 An old internal bug was fixed.
V1.77
 The old bug with Alt-T keystroke was fixed. Sometimes it was
necessary
 to click on them twice to switch transmitter on.
 If there are several sound cards in a computer, you can select
 the card by the "SoundCardNumber" parameter of [RTTY] section of
 TRUETTY.INI file. (SoundCardNumber=0 , SoundCardNumber=1 etc.)
V1.76
 HF-PACKET (300 bps) monitoring was made (Mode->AX25).
[...]

```

Muscle Shoals, Alabama. September 17, 2001 Creative Services Software has announced that they have PKTerm '99 version 1.5. This latest update supports the hot new digital mode PSK-31 as well as the AGW Packet Engine. It also supports the new PK-232/PSK-31 hardware interface.

The popular TNC program, written in C++, has been available since November 1997.

Company President Rick Ruhl, W4PC said, "All of the features of PkTerm 1.5 except for one are going to be available in the free upgrade policy that CSS has had for the past 5 years. If you don't have the PK-232/PSK-31 hardware interface, or purchased PkTerm '99 after May 15, 2001, then the entire update is free. If you do own the interface, and purchased Pkterm '99 before May 15, 2001, it's only $29.95 to enable access to this hardware interface. "

Timewave Technology, manufacture of the PK-232/PSK, is offering a $10.00 coupon on the full version of PkTerm '99 or the enabling fee for the hardware interface through the end of October. This makes the full version only $69.95 and the PSK-31 hardware upgrade only $19.95.

New enhancements for version 1.5 include:

- PSK-31 sound card support, using the TNC's keying circuit or the TNC's serial port for keying the radio with RTS or DTR, saving a serial port for other functions!!!
- PK-232/PSK-31 Hardware Interface Support
- AGW Packet Engine for sound card packet support
- Voice DX spot announcements
- Support for 2 simultaneous TNCs (1 multimode and 1 packet)
- Point and click settings for TNC commands for startup
- Startup/Shutdown commands for each call sign
- 10 mode-specific macros in addition to 10 global macros for each call sign
- CQ, ID and QRT macros
- Auto CQ functionality
- Pactor connected station call sign display in title bar
- Pactor Quick Connect
- 4K chat and macro buffer
- Support for Satellite Telemetry with the DSP-1232 and DSP-2232

And includes supports that the previous versions had:
� Macro Variables {CALL}, {UTCTIME} etc
� ASCII transfer for UNPROTO mode in Packet
� Multiple file select for ASCII transfers in HF
� Abort ASCII file transfer now available from HF
� Interoperability with Log Windows, DX4Win 4.06 and Logic 5 logging programs
� Basic radio control interface
� Added FIG/NUMS menu option in PKTerm
� Additional commands specific for the PK-900 and DSP-2232 in PKTerm
� Multi-stream multi-port support. Up to 26 streams per packet port,

each in a different window
�   Supports G-TOR� and G-TOR Monitoring (Kantronics)
�   Switch between streams with a click of the mouse
�   Text and binary file transfers with YAPP
�   Supports COM1 to COM35 (including USB serial converters)
�   User defined colors and fonts!
�   User defined macros!
�   Separate window for non packet HF modes, from CW through NavTex at the click of a mouse
�   Save QSOs to a file that is compatible with Microsoft Word�
�   Multiple monitor windows allow you to watch traffic on each radio port

The program runs under Windows 95/98/Me and Windows NT/2000/XP. It is a true 32-bit Windows application, designed using the Windows Style Guidelines available from Microsoft.

PKTerm '99 is $79.95. The PK-232/PSK enhancement is $29.95 if upgrading from a previous version purchased before May 15, 2001. It is available directly from Creative Services Software or your favorite dealer. You can also download the program in demo mode from the CSS web site.

Creative Services Software is at http://www.cssincorp.com.

```

I've found what looks like a nice spot to mount my IC-2100H 2m rig in my 1998 Honda Civic. However, I've determined that, if mounted here, my 55w 2m rig would be merely inches from the Civic's SRS (airbag) control system. I'm a bit concerned that high power operation of a rig mounted in such a location might cause inadvertent deployment of the airbags.

Have any of you had experience in this area?

Thanks, Michael N9BDF, N9BDF@arrl.net

Timewave Technology Inc. is now shipping the new PK-232/PSK Data Controller and Sound Card Interface. The PK-232/PSK has all the features of the legendary PK-232/DSP plus a new dual transformer-isolated, software-controlled sound card interface. Only one cable assembly connects the PK-232/PSK and your transceiver! See the details at http://www.timewave.com.

A friend of mine bought a Warbler for PSK31, and it receives fine, but doesn't transmit (no deflection on the antenna tuner). I borrowed it, tried it with my computer/antenna, and it works great. So it's a problem with the serial port on his computer (Dell, running ME; I'm running Win98).

Anyone know what could be the problem or how to set up or activate his serial port? thanks, David

NB: removed the ABC if you email me direct (which is welcome)

Thanks Arto,

I'll be sure to check this out.. I haven't looked, but the only major
change in the 2.4 was the addition of the chat mode? I may be all wrong
here, but I guess I'll find out when I download it...

Do they require you to purchase the upgrades, or are the free for some time
period?

I am on v 2.5.1 of WinAPRS.  How do you set this up correctly for the ISS?
It says that "space mode" is for "MIR testing".  How do I set it up for the
ISS and it's "NOCALL"?

Thanks,

Duffy

Hello All,

I am trying to create a homemade vhf Digital Selective Calling
(DSC) transmitter (this is used as an distress alert feature on vhf
radios that ships at sea use) that will read a static message in
memory and transmit it. Below is the text from the ITU
recomendation that describes the modulating process. (the complete
text can be found at http://www.gmdss.com.au/dscspec.htm)

----------ITU recommendation----------------------

1.3.2 Frequency modulation with a pre-emphasis of
6�dB/octave (phase modulation) with frequency-shift of the
modulating sub-carrier for
use on VHF channels:

1. frequency-shift between 1 300 and 2 100 Hz; the sub-carrier
being at 1 700 Hz;

2. the frequency tolerance of the 1 300 and 2 100 Hz tones is�10
Hz;

3. the modulation rate is 1 200 Bd;

4. the index of modulation is 2.0 � 10%.

This makes very little sense to me and if someone could post
something or point me in the direction of a better description it
would be appreciated. A website or book on frequency modulation and
creating waveforms like the ones described above would be great.
Also advice on Integrated Circuits (modem chipsets?) that would
achieve the above would be appreciated

With all due respect, if the material you quoted "makes very little sense" then you are in a world of hurt trying to develop the transmitter.

I would suggest that you either place this project with someone with the required engineering background or that you plan to hit the books for some time to come and get up to speed on frequency modulation.There is semi-infinite resource in this area in the technical literature. I suggest a visit to the public library.

Sorry to sound negative, but this is sorta like asking how to build a car and wondering what a wheel is . . .

Hi,
```

I was the high bidder for the following four items:

MICRO TRAINS #100120 (4011) HERSHEYS HUGS - $17.99
Item # 1626641052

MICRO TRAINS #100090 (2000) MTL HOLIDAY CAR - $15.69
Item # 1627463495

MICRO TRAINS #69100 (6903) HOLIDAY PEPSI CAR - $16.50
Item # 1627466038

MICRO TRAINS #59560 (2000) MTL HOLIDAY CAR - $13.49
Item # 1627470007

Sub-Total	$63.67
Shipping	$ 6.00
Total	$69.67

I can pay via Paypal, Billpoint or personal check. If you select the personal check, I understand if you want to hold shipment until the check clears. Please provide me an address to mail the check.

Thanks,

Duffy

Yup, I sure did. Noticed I did that right after the message was sent. Did a message cancel, but who knows if that really ever works. Sorry that all the hams had to read about my other hobby, collecting N scale model train cars.

The upgrades are free for the registered users.
They said there will be soon next version including other new modes (MFSK16,
PACTOR and some other perhaps..?)

  Does anyone know of a shareware version of PC Pakratt for Windows? This
is the software used to run the old AEA PK232-MBX multimode processor.
Not interested in going the EBAY route to try and get a copy of the
original. Not that I have anything against AEA's software, I just don't
like EBAY.

Jack,

PcPakRatt is a commercal program, not shareware, which we (CSS) bought the rights to in March 1999. It's Copyrighted by us now. In June 2001, we discontinued sales and support of due to Microsoft ending support on DOS, Windows 3.1 and Windows 95 on December 31, 2001.

The current 32 bit software for the PK-232 is PkTerm '99. It's a true Windows 32 bit program written in C++. You can download the demo of it from http://www.cssincorp.com/pkterm. You'll need to have firmware of 12/93 or greater for it to work best.

PkTerm '99 will also support PSK-31 with Timewave's new PK-232/PSK interface.

Rick - W4PC

Hi,

my yr901 does... nothing well.

I've connected it to my TRX (ft 902) and my TV
but I only see a screen full of '@' chars. ;(

Does anyone knows what might happend? Maybe the EProm is screwed up? (does
anyone can send me the code? so i can do a new one?)
Or does anyone have some similar problem?

Tnx. Jochen (dh1jc)

Never testet the yr901. Got that just one week before...

Outlook must be well underway to become the piece of software causing the
most actual financial damage.  To persons, companies and the public.

Any idea how much it has rung up until now?

Rob

I'd Go with the Rigblaster It's a good rugged Interface comes with software also..
Or Digipan's interface it great too..

Take a look at
http://www.westmountainradio.com/
&
http://members.home.com/hteller/digipan/

  I KNOW PcPakratt is NOT shareware. What I was looking for was shareware
software that works LIKE PCPakratt. Have no intentions of stepping on
your copyright.
  I don't feel like changing my eproms in my old PK232MBX at around $60 a
pop just to run some software. My eproms are circa 1991. I've made good
use of the shareware concept, using and paying for stuff that far
outstrips commercial software in usability.

I wish to put BPQ32/BPQAXIP on a system on my LAN behond a home router, however I have been unable to direct my NetGear RT311 to route it. AX/IP (IP Protocol 93 RFC 1226) is for consumer use quite rare, although it is a recognized IP protocol, its quite rare among internet users.

The NetGear RT311 provides means to route IP Protocol such as 6 (TCP) and 17 (UDP) to specific LAN addresses, I can't see any way to get to do the same for IP Protocol 93 (AX/IP).

Since there must be a dozen low cost home routers on the market does anyone here have one for which they have succeeded in providing WAN access to an AX/IP sever on their LAN?

I should note that if BPQ issues a connect, i.e. an outbound packet, then the router will allow replies. However incomming unsolicited AX/IP packets are blocked.

Jack,

In your previous message you said:

"Does anyone know of a shareware version of PC Pakratt for Windows? "

This would make one assume that you wanted a copy of the product, since you didn't use the word 'like'. No offense was meant at all.

I would hope you'd want to upgrade your TNC to the latest stuff. Not only does it give you support products, but helps the companies innovate and create new products in the future. :)

best

Rick - W4PC

You are probably talking about many-to-one NAPT. (Network Address and Port Translation)

The router is translating TCP and UDP packets, by changing the IP address of the outgoing packet from the original into your public Internet address. At the same time it changes the port number. It puts the original address, original port number, and newly assigned portnumber into a table. When a packet comes into your router, it checks the destination port, does a lookup in the table, and changes it into the original address and port. The table is dynamic: it is built when the router sees outgoing traffic, used when handling incoming traffic, and flushed by "not recently used" timers in each entry.

This is only possible because TCP and UDP have two address entities: the IP address and the port number. So within your single IP address, the port number can be varied to play this trick.

When using other protocols, that the router does not know about or that do not have this port number, this trick is not possible. Many-to-one operation is not possible in that case.

So, what you want would not be possible in general, but could be made to work when you can live with having only a single system on the network talking that specific protocol. A fixed entry could then be added to the table that forwards all traffic for protocol 93 (or all traffic for all nonrecognized protocols) to a hardwired address on your LAN.

Note that you should not try that using commands that are advertised to do "port mappings", e.g. to send SMTP or HTTP traffic to a host. These are not ports. There should be a separate command or syntax to map a protocol, without specifying a port (which that protocol does not have).

You can't. AX.25 does not incorporate routing information. It is a point-to-point protocol. As such, it "lives" in layers 4-7 of the OSI model (below the network and transport layers. AX/IP means "AX.25 over IP", i.e., using IP as the transport layer. Thus, you need software at either end of the IP "pipe" to communicate.

In other words, AX.25 tunnels.

"Protocol" does not imply "routable". Another common example of this is NetBEUI.

But all I am asking is that when the router receives an IP Protocol 93 packet that it routes it to a single machine on the LAN. Perhaps that is why you mean by tunnels.

Its entirely possible, perhaps likely, that home routers simply were not designed to do this simple, but rarely needed, thing. In all the manuals for the various home routers that I have located on the internet, all appear to expect the server hosted on the LAN to be TCP or UDP.

The only exception is I have noted that the LinkSys, which I don't have, but might be able to dig up, has something called DMZ hosting which the manual

implies exposes one machine on the LAN to all incomming packets the router
can't identify as responses other machines on the LAN are awaiting. But in
the description of DMZ it states that it forwards 'all ports for one PC
simultaneously', implying that only the protocols using port numbers might
actually be handled.

AX/IP is an encapulation protocol and as such does not conform to the OSI
model.  It is not important whether AX.25 is routable, the routing is
performed at IP level.

The problem is that the original poster is (probably) not talking about
routing, but about network and port address translation.  That is another
issue.

Rob, so is it possible that a router with the right rules could route all IP93 packets to a single machine on my LAN? It seems to me that if such a router exists that would be sufficient to my needs.

Ron

Yes, this is possible.  When your router can forward a protocol to a
```

specified internal address, and will translate the address on outbound traffic, this will work with AX25 over IP.

So now the issue is finding a home router that can do it. I have a Netgear RT311 and it appears to be able to support servers only of the 'common' type, such as http, pop3, telnet. All of these rely upon port numbers. The Linksys BEFSR41 has a feature called DMZ which holds out some hope, I am going to try to borrow one.

Of course I could old computer out of the pile put in 2 nic's and install Linux router/firewall, but I would prefer these small low cost routers, they don't require a UPS for example.

Anyone reading this thread who has any knowledge of some of the other home routers I will appreciate hearing from you.

Ron N5IN

I have the Linksys. The DMZ feature is for network games, where you need a PC direct to the Internet. Otherwise, you can turn off DHCP, and the Port Forwarding feature can be used.

I have several machines on my home network. A Linux box does my Web server and SSH, and these two ports are set in the forwarding rules. My Win98 box gets the Speak Freely port, and UI-View APRS ports.

What you might want to look at is a program called VTUN:

http://vtun.sourceforge.net/

If all you have are Windows NT or Win9x boxes, or a Mac, you should try the PGPNet Freeware:

http://www.pgp.com/products/freeware/default.asp

VTUN can tunnel IP or Ethernet, and is probably what you need. In this case, you don't worry about AX.25 over IP tunneling, but just tunnel IP or Ethernet between private network members. The tunnel can be encrypted and compressed. I used this for awhile on a wireless link, and am now setting it up to attach to the corporate LAN to my home LAN using the cable modems by Cox. VTUN uses Port 5000 by default, and you set this into your Linksys forwarding web page.

VTUN doesn't require you to recompile the Kernel like SWAN does. Although SWAN is more compliant with other IPSec protocol computers (like PGPNet).

Its possible DMZ might work, although I again suspect its expect IP Protocols 1, 6, 17 (ICMP, TCP, UDP) will be required. But if it does happen to work then the machine on which I have the AX/IP server will be bare, whereas I would like it to be open to just IP93. But its worth checking if I can borrow a Linksys and try it.

I don't think IP Forwarding in the Linksys will help as I believe it will forward only the common protocols, TCP, UDP, and associated applications associated with port numbers, such as ftp, telnet, http etc. In the instructions for IP Forwarding in the Linksys manual you must enter port numbers. AX/IP (IP Protocol 93) has no port numbers, so the IP Forwarding screen can't be used. If I am wrong, I will be pleased to know how to do it!

Your other suggestions require an always on machine on a UPS which although more flexible isn't quite as handy (for me) as a $!00.00 router. But I am off to read about them......

Ron

Hi guys I am now setting up a new site. More or less completed with added software for vhf meteor scatter and also more Linux software. All software is aimed at MS Win or Linux platforms, and generally for use of a PC's soundcard.

Take a look see, plus of course the interfaces to isolate your radio from the pc.

http://www.g3vfp.com

Best Regards, and enjoy.

Dave G3VFP.

P.S Thanks to those whom have promoted links to my sites over the last five years, I certainly appreciate it.

You're the second person that's mentioned XPWin. Going to give it a look. The only thing that I wonder about is does the author still support the program? The initial page on the site says last updated (the page I guess) in 1999. Anyways, I'll find out. Thanks all who have replied.

Right, you have to dedicate a whole IP address for AXIP usually, as most home routers only process UDP and TCP, and don't get into the protocol bits.

AXIP was designed and used before Internet security became important.

When I was with a local ISP in town, he was always configuring his router to block any protocol he didn't understand. I had to keep reminding him, until I finally gave up on Amateur IP altogether. Once I figured my whole user base was merely a bunch of cheap guys who wanted email service :-)

The way to do it today, is to use IPSec or a tunneling protocol such as VTUN (which you can settup to use Ethernet over UDP on port 5000).
Most network administrators allow this data through. It is very easy to create your own network of, say, DX clusters, or node backbone.

The hard part is coordination with all the users in the network.

I use a battery and a trickle charger for all my Ham radio stuff. Computer, radio, TNC's, all run off of 12 volts (Linux and Win98 laptops). I plan to go solar this winter.

I ordered a Jupiter today.. should have it next week some time. I have been using the Rigblaster with my FT-990 (now sold) I am using the M8 (8 pin version of the Rigblaster). My Yaesu adapter for my Heil mic plugs directly into the Rigblaster of course.

My plan is to change the internal jumpers in the Rigblaster from the 8 pin Yaesu format to the 4 pin Ten Tec format. I think all I need to do at that point, is put together or buy the adapter cable that will go from the Rigblaster's RJ45 microphone output jack to the 4 pin mic connector on the Jupiter.

I plan to use the external speaker jack on the Jupiter and not make use of the ACC jacks on the transceiver. (Just as I did with the 990).

So.. if anyone here has already gone down this path I would appreciate your comments.. especially if you feel I may be "missing" something...

The issue is not really security here (although AX.25 over IP is a potentially insecure protocol).

It was designed before people were translating addresses on a large scale. In those days it was assumed that any device on the Internet would have its own fixed address, and that it would be perfectly routed across the entire net. So any device could communicate with any other device when it knew the address.

This has become inpractical not only for security reasons, but also because of the advent of the standard dialup (or ADSL) account, that provides only a single address to a single customer.
The small "router" boxes like the Linksys are not really routers, but address translators. To operate, they often need to know the protocol they are handling, and it is infeasible to let them know about all existing protocols.

Fortunately, for AX.25 over IP they do not need to know more than that the protocol 93 sits directly on top of IP. So it is NO port forwarding. Port forwarding is for protocols that run on top of UDP or TCP.
You need protocol forwarding.

Alternatively, when you don't really need AX.25 in IP compatability but just want to tunnel AX.25 traffic over the internet to someone that can adapt to your changes, you can tunnel the traffic in UDP datagrams instead of directly in IP. This has become another substandard, and Linux systems can do it. I think some JNOS versions as well.

Rob

AXIP (hell, the whole ampr.net) is a control freak thing. The AXIP RFC is probably the most words Brian ever wrote in his life. The ampr.org web page is a study in Teletype motif. The whole ampr.net was obsolete in 1991, when most Hams started using Linux, or BSD, bigtime, and could leave the vanity NOS versions behind. AXIP looks exciting to a DOS programmer, but offers nothing to a computer with a complete network programming base.

I don't think ported UDP tunneling is an alternative, I think it is the normal way to do things. If people want to continue using the ampr.net address space, I would tend to push them into this mode, rather than any non-ported gimmick such as AXIP.

Our state agencies are switching over to VHF DIGITAL Radio's, do they make scanners that can receive these communications?

Start with:

http://www.trunkedradio.net/trunked/apco25.htm

But I suspect you will need to purchase an APCO-25
radio. They are starting to appear at some of the biker
swap meets.

Got my hands on a Linksys (BEFSR41 V.2), the 4 port $100.00 router.

IP Forwarding won't let in AX/IP, it appears only to forward TCP and UPD to the LAN side.

DMZ Hosting, which looked hopeful, also blocks AX/IP packets from entering. In addition it does something which I was not expecting. On LAN originated AX/IP packets it sends them to the WAN, with the proper destination address but with the source address as an internal address on the LAN (in my case 192.168.1.100) rather than the router's WAN address..

In any case the Linksys is useless for AX/IP, as is the NetGear RT311 and the Netopia 910. I am tending to believe all home routers will be useless for AX/IP.

You need to remove the UPS limitation from your specification.

With that gone, you can use any RedHat Linux
from 5.2 on up.

The cheap cable modem routers are bare bones.

You might look at a Cisco 2500 series router. I've
seen some pretty good ones in the $1300 range.

Just curious:
Why not do a tunnel protocol that will work across routers?
e.g. tunnel with UDP?
Would not take much of a shim in the protocol stack.

Hank

Yes, UDP will be the next step. But its been useful to learn that AX/IP
IP93 is incompatible with the home routers however.

That is just a plain bug.

I would not buy a home router just because of issues like this. You will
be dependent on the willingness of the manufacturer to fix bugs.

Take a PC, even with just a floppy, and build a router from that. It will
be more flexible and when things go wrong you can fix them.

(there are many single-floppy Linux distribuitions for this purpose)

AX25 over IP works across routers.

Hello,

I am looking for radio control program CAT980 for the Yaesu FT980 Transceiver. Does anyone have a copy of this or know where to download it on the internet? It is on the QRZ.COM site but ther seems to be a problem with downloads from that site.
Thanks,

Mike lawlor EI3CN

Irrelevant, AX.25 over IP offers no advantages to
UDP port tunneling, and UDP port tunneling is available
on low cost cable modem routers (DSL, etc).

My own experience was, that my ISP blocked
protocols he thought was a security threat. I could
have gone somewhere else, but he gave me 16 IP's
for the price of one. I needed two to do AXIP.

UDP Port tunneling requires only one IP.

What does using UDP/IP buy you other than additional overhead per datagram?
I can't see anything gimmicky about AXIP as described, it seems perfectly
appropriate to me, and no more or less difficult to implement.

Terry

.. and probably also no IPIP, GRE, IPv6 encapsulation .. for the same reason.

Does it allow ICMP through?

regards
Terry

I've used XPWin.. Pretty good program but don't know about support anymore. It was years ago that I tested it. It isn't shareware though and as I recall the license is around $90 or so. I've never found much shareware (free?) on the web that works well with a TNC and plays well with the other software and the OS.

Better to use software that is fully Windows compliant and supported, unless you enjoy writing and hacking software. (I don't). DOS based stuff is headed the way of the dinosaur. There are some Linux programs out there that are free it you want to work with Linux. I have used Linux in the past for packet (TNOS) successfully. If you want to learn a new OS that could be a great way to go.

I run Pacterm under W98SE2 and simultaneously a logger, MS Access for other data, word, rig control, and am on the Internet. All stable on an old AMD K6-266. Delicate balance!

Good luck.

A Port. Otherwise, for AXIP, you need a whole IP.

>A Port.  Otherwise, for AXIP,  you need a whole IP.

That isn't true.  You need only a protocol number, and it was assigned
long ago.

Terry

Regarding ICMP, I don't have an answer. If I recall correctly one of ICMP's function is 'ping'. The Linksys does have an option they call 'Block WAN requests.' When enabled the Linksys itself does not respond to pings, when disabled it does respond. The idea is to make it appear you do not exist.

In the IP Forwarding screen, where you set up servers on the LAN to respond to WAN requests, the only options are to enable TCP or UDP or both. Its possible I suppose that ICMP may get through, but I would need to test that...have not tested it yet.

ICMP can carry a variable length message, I don't know the length limit.

Do you have some idea in mind?

It is not supported. UDP is supported in the cheapest router/firewall.
Now I agree that any programmer can build a Linux router and create an
AXIP solution. But why bother.

What does AXIP give you that a UDP port solution doesn't? And don't
tell me about the overhead. It is insignificant over the Internet tunnel
being used.

Not across any routers of interest to me: those at my ISPs.

Alternatively, set up a linux system which doesn't need a read/write
file system. For example, one which boots from floppy and loads
its root file system into a ram disk. Then nothing is lost when
the power goes.

The problem is not in the routers at ISP's it is in the NAT boxes at home
that are erroneously called routers.

We are pleased to announce that version 1.0.20 of Log Analyser for
Windows is now available from http://www.acarsonline.co.uk

This release offers support for ZCARS logs and now allows the removal
of duplicate data from the main database.

This is a FREE upgrade.

Thanks,

Mark Avey

That's a failing of cheap routers, there are a number of industry standard encapsulations (IPIP and GRE amongst them) that will also not be supported by the limited IP implementations in such devices. That isn't a failing of AXIP or its design. The problem lies with the devices.

> What does AXIP give you that a UDP port solution doesn't? And don't

> being used.

Absolutely nothing, except correctness and efficiency of implementation.

The overhead issue is insignificant only when you're making assumptions about the type of IP network you're carrying your data across. A fundamental design philosophy of the internet is 'be conservative in what you send and liberal in what you receive'.

If I'm carrying encapsulated AX.25 frames over my IP-based GPRS mobile telephone service I might well care about the protocol overhead, especially in the presence of small MTUs that might induce IP fragmentation as a result.

Terry

I'll try and make it more clear Rob: my ISP does not route AXIP.

Sad for you... over here there is a kind of "quality certificate" for ISPs: being member of NLIP. This organzation specifies Internet access and explicity forbids filtering of the traffic on protocol- or port level against the wishes of the customer.

So most ISPs here won't arbitrarily block protcols and risk endless discussion about being in violation of the rules of this (imaginary) "quality certificate".

Maybe it is a good idea to have some form of ISP certification too, so you can avoid the clueless ones (that is why it was invented here).

Rob

For sale: Paccomm 56K WA4DSY "GRAPES" modem + cable
for PI/2 card. In excellent condition. $275 shipped to lower 48
states.

Also Microwave Modules 10 meter to 222 transverter used with above
items + cables. In excellent condition. Includes extra crystal for
use on 218-219 MHz fixed link band segment. $150 shipped with
purchase of GRAPES modem; will not sell separately until modem is
sold.

Call Jim at 716-381-3102 (evenings before 9 PM) or 716-231-2417 (work)
or email to ZZZjim_cronin@juno.comZZZ
(remove ZZZ on front and back to reply.)

In the U.S. it is pay as you go. If you want a protocol
outside the defaults, you pay an extra fee, and most often
are considered a commercial customer, and not a home
user. AXIP is not on the default home user list, as it will
allow you to set up servers. Servers generally are an
added fee as well, unless you use the ISP's provided
server and upload your files there.

Capitalism sucks, but that's the system we've chosen.

There are many (unfortunately fewer all the time as the smaller ones get taken over by Earthlink, MSN, etc.) who will allow servers, AXIP, etc., at the basic rate. These typically aren't the same ones who have the lowest rates, however.

All the more reason to check these things out when selecting an ISP. Unfortunately in some areas there are not a lot of choices available.

I too, am in the repair business and do not take lightly the ethics of repair.
They had the equipment for almost a year and never even opened it up. They never
responded to my requests for an update or sent me any kind of communications
regarding the status of its repair. If you or I ever ran our business that way
we would not be able to enjoy our good reputations. Don

Here are the rules you must accept in any service industry:

Never make excuses.   The truth is the only answer that is ever acceptable.

The customer may not always be right, but you must treat him as if he is.

Respect and courtesy for your customers, workers, and suppliers are absolutely essential.

Never over-promise.   If it's going to take a year, say so.

Never under-estimate.   If it's going to take a grand to fix it, say so.

If you're so busy that you can't attend to the details of customer service, then you can't afford not to hire somebody who will take on that task.

If you point your finger at a customer and say 'He's the problem!' then note that while one finger's pointing at him, the rest are pointing back at you.

An argument occurs at the intersection of two jerks. You can avoid the argument by behaving in a non-jerk-like manner.

Deliver the unit as promised. If you can't get to it in the quoted time, contact the customer and explain.   If he asks for it back, return it without hesitation, with an apology, and postage paid. It's worth it for good customer relations.

Your standard of service must be the same for all customers.
Do EVERY job to the highest standards and EVERY customer
will be pleased and will deal with you again.

Last but not least,   NEVER jump customer's equipment in line.
They come in first, they get serviced first.   No customer's equipment should ever be set aside to do an expedited repair on another unit for a more important customer.   No customer is any more or less important than any other because they're all paying you.

CJ

I do not care that this particular ISP does not route AXIP, since I
do not see any use for that protocol. Another ISP I have used does
route AXIP, allows me to run various servers, etc. It's all a trade-off
between the various services and the cost of them.

> So most ISPs here won't arbitrarily block protcols and risk endless

> discussion about being in violation of the rules of this (imaginary)
> "quality certificate".

My current ISP does no such things. The account I chose give unlimited dialup connect time at a reasonable rate with excellent connects, and supports all the features I want. If (and it's a big IF since I'm fairly well out in the boonies) DSL or cable ever become available here, I'll switch ISPs again. For the DSL case (which is more probable than cable) I've already chosen an ISP, had a nice talk with their head sys admin, and would get a couple fixed IP with ability to run "any server I like". But DSL is not yet possible here ...

> Maybe it is a good idea to have some form of ISP certification too, so you
> can avoid the clueless ones (that is why it was invented here).

My current ISP is hardly "clueless" in any manner!

And in any case routing AXIP is not of interest, since I have excellent radio connections available instead (grin!).

>Capitalism sucks, but that's the system we've chosen.

There are some cable firms here that operate that way, i.e. they don't allow servers and try to do clever things to enforce that, but they claim this is necessary because the uplink bandwidth is limited and shared, and running a popular server would have impact on the performance of other subscribers in the area. That sounds like a valid reason.

On DSL this is not the case, and I don't know about any DSL provider that has such regulations or filters.

Probably because of the same capitalism: when you provide filtered service where others provide full service, and this fact is known to (or can be known to) your customers, who is going to buy your service? And how are you going to survive? You will have to offer your service for a lower price, whereas you have increased cost because you will have to install and maintain filters...

This all sounds very artificial to me. It will cost them money to filter out AXIP, so this cost thing is not about real cost but more about trying to charge for anything on a bit-by-bit basis.

I presume when you can't get AXIP, it will also be a problem to have GRE or IPsec. Those are non-TCP non-UDP protocols as well, that sit at the same level as AXIP. Not having those will mean you can't setup a VPN using the standard protocols.

Again, that can be circumvented by encapsulating in UDP or TCP, but this certainly shows that a filter only serves as a nuisance and will never block the usage the ISP was trying to block. With some extra programming you can always get around it. A cleverly programmed home router could translate AX25-in-IP into AX25-in-UDP/IP and vice versa. While there probably won't be any on the market that are going to do that, I certainly foresee boxes that will tunnel standard VPN protocols over nonstandard TCP or UDP ports, just to fool the ISP's.

What cost? Just no entries to route it. Is a "cost" to add it to the tables.

>What cost? Just no entries to route it. Is a "cost" to add it to the tables.

No, it does not work like that Hank.

I always wonder if you are having some split personality disorder. One
time you write things that would indicate you know how TCP/IP is designed
and operates, the next time you post completely clueless remarks like the
above. It is almost like there are two "Hank Oredson"s.

But well, let's be kind. The "routing" in IP operates (just) below the
level we are looking at. An IP datagram is forwarded to its final
destination using only the IP address (and possibly the "type of service").

Only the final destination looks at the "protocol number" field, which
decides if the payload of the packet is a UDP datagram, a TCP segment, or
in this case an AX25 packet. It is like the PID field in AX.25.
The routers need not be concerned with this, it is only of interest to
the final destination host. Don't tell us you need to configure a
digipeater for every different PID you want it to digipeat.

Of course, filtering is being done that peeks into fields that routers
should not look at. And address translation is being done that needs to
modify some fields that according to the original specs should always be
left alone. But an unconfigured router out of the box should route AXIP
just like it routes UDP or TCP, without any extra effort. Extra effort
is only required to prohibit AXIP.

Rob

Hi,

I picked up an MFJ 1270 (not newer B or C model) with v.1.2.9 firmware dated 12/23/92 at a hamfest and cannot get it to send packets. I'm using BUXTERM on a laptop.

The TNC and laptop appear to "talk" FB as I was able to reset the TNC, enter my call and change various parameters. It is recieving packets from several stations; they show up with monitor on or in response to MHEARD. It even toggles the PTT line in the modem setup mode.

Unfortunately, the blighter won't transmit when I try to connect to another station on the MHEARD list. It appears to get the CONNECT command and set up a packet because an LED lights on the TNC and "STATUS" replies "Packet Pending" but the transmitter doesn't get keyed nor the packet sent. Eventually, I get a timeout message.

I'm bought a TNC-Xcvr cable specifically for my radio from MFJ and the TNC can key the Xmtr via the PTT line in modem calibrate mode so I suspect there is some simple thing I'm doing or not doing that's keeping the packets from being sent.

Any advise appreciated.

TIA and 73
KA3DWW

@home has an agreement you sign, to not set up any servers. They do not just cut you off when they find one, and for the past few years port 80 was wide open. It wasn't until just a couple weeks ago that the Code Red attack pretty much wiped out @home. There were so many bootleg copies of Microsoft IIS running that had not been patched, that my "activity" modem light was on solid. I put my Linux box on the cable to sniff the line, and it was a huge ARP storm due to the Code Red IIS attack.

I'm glad they did something, and I hope Microsoft goes after all the bootleg users. They should all serve at least 30 days in a chain gang. Not for stealing worthless software, but for network abuse. I sent all my logs to the FBI and the CERT, so it will be easy to compare IP addresses against customer names and registrations.

My point being, that most home users aren't qualified to set

up a server, and don't have the intelligence to protect their
systems on a daily basis.

While VPN is not one of the restrictions I'm aware of, and
certainly they have no control of a tunnel, but they do have a
"Top 10%" club, where those who are in the top 10% of
upload bandwidth are identified and dealt with. In my case,
my company filters out all @home IP ranges (too many inbound
attacks) so VPN from home isn't an option on this network,
and I have to dial-in with a modem.

Rob, this has nothing to do with how tcp/ip is designed and operates.
It has only to do with my particular ISP (and probably many others as well).

It is done at the router sitting at the POP.

Only specific protocols (and ports) are allowed to route from
the user into the network, and to route from the network to the user.

"Anything not specifically allowed is forbidden."

It is a business matter, not a technical matter.

I also hope Microsoft gets more flak for destabilizing the
network with their so-called "innovative" (but in fact insecure)
software.

It is not only this IIS incident that is causing extreme damage,

but also Outlook Express which is wellknown as a virus and trojan
host.

>My point being, that most home users aren't qualified to set
>up a server, and don't have the intelligence to protect their

It should not be necessary to protect a system on a daily basis.
Not only are potentially vulnerable servers installed and enabled
by default, but there is no easily visible way to switch off all
of them. This incident has shown how bad that is.
But instead of pointing to the provider of all this evil, all the
blame is put on the users.

>While VPN is not one of the restrictions I'm aware of, and

That is a company policy. It is independent of the other issues.

Rob

So your ISP invents a policy, implements a few filtering rules, breaks
their user's traffic, then claims that it would cost money to fix that
and will charge extra for it? How clever...

That isn't an Internet Service Provider, it is a Web/Mail Service Provider.
We had a few of these, but they are dying away quickly.

```

Gee, I can remember seven or eight years ago, when fairly often, the subject of amateur tcpip would come up at gatherings of packet radio ops. There was a fair amount of curiosity among rank 'n file hams about amateur tcpip, back then. Now, the only place I hear about it is here, and at TAPR's functions. Oh, yes, there's also that moron that took over as CQ magazine's "Digital guru" after Buck Rogers moved on to other things. You know - The dweeb who never mentions digital ham radio in his (digital ham radio) column, because the space is all taken up by the time he gets through tooting his own horn and mindlessly promoting TAPR, ignoring the damage that organization has done to the hobby? (Yawn)

The discussion of amateur tcpip here has many parallels with the discussion of code/no-code on the "ham-policy" ng.... A small clique of the same old tired group of hams, mindlessly beating the same old dead horse, taking up valuable space that otherwise could have been used to discuss something more relevant to the hobby.

On the other hand, I can certainly see where this would be the legitimate place for the dozen or so people who still care about amateur tcpip to discuss their interest... It most definately fits into the "misc" category, since there now appears to be no mainstream interest in amateur tcpip whatsoever.

Yes, and I think I found the problem thanks to everybody's help. It appears I wasn't waiting long enough. There is apparently a preset delay and nothing gets sent til there is a full packet or this time expires. I gave the TNC a connect command then gave up and went in the other room to play Free Cell on a PC. After a while, that PC buzzed indicating QRM.

I went back and watched more closely. Sure enough, the PTT light would flicker and the ammeter on the power supply driving the xcvr whold flick even tho the xcvr itself gave no indication. Now if my neighbor will just turn on his set so I can connect ...

Thanks everybody & 73!

I'm looking for a sound generator program to use in testing my soundcard. I've got Gram to use on another comouter to look at the output, but want a generator to produce waveforms for testing.

This is all for making sure that the built-in sound chips in my laptop are of good quality for RTTY and PSK31 work.

Does anyone know of any current implementations of AX.25 encapsulation in UDP? It looks very straighforward, however if there is an 'unofficial' standard in this regard I would be interested in knowing about it...there could be some aspects that have not occured to me.

It is done the same way as for AX.25 in IP.
UDP port number seems to be 10093 by default, but that number has not been registered.

(why are radio amateurs often using unregistered port numbers? it is straightforward to register them)

Rob

Rob....

Can you tell me where you got this default port number (10093)?

And yes I have seen how to register these...might be worthwhile, unless its expensive...hopefully not.

Once I am satisfied with it, Ill announce it here and I will register the
port.

Ron <no-spam@nospamX.com> wrote:
>Rob....

>Can you tell me where you got this default port number (10093)?

It is the default in the Linux implementation.

>And yes I have seen how to register these...might be worthwhile, unless its
>expensive...hopefully not.

I have registered a couple of ports and it cost nothing. But that was before the .com hype.

Recently I registered an organization Unique-ID at IANA and it still cost nothing. So maybe it is still possible.

However, it seems to be not so simple to register an existing practice. I tried to convince them that existing practice for the port numbers I was registering was to use port XXX but they still gave me other numbers (459, 1535, 1536).

In fact, I am not using 1536/udp right now and you could use it for the AX.25 n UDP tunnel.

I have seen people on the "worldwide chat" for many years, and they have never bothered to register a port for it. They just hijacked 3600.

I have an old SHARP laptop 8088 cpu running under MS DOS 3.3 and GW basic 3,2. Is ti possible to connect with this computer to my local bbs to read and send packet messages, and view packet cluster activity? And if it is possible, which software i must run under dos 3.3?
Any suggestions? The tnc is a baycom type tcm 3105. Can someone help me?
Thank you and best 73 de sv2bxc.

I suggest you get the baycom software, which is designed for this board. It runs on DOS and consists of a TSR which controls the Baycom modem via a serial port plus a terminal program.

See http://www.baycom.org

This has got to be the best dam radio WAREZ SITE on the NET. For direct FTP downloads and links. Go to the URL below. I was surprised @ how easy it was to download these files. There are no advertising banners or other profit making gimmicks. No silly re directs and misleading info. One thing though when you visit the site be sure to sign the guest book. And also vote for the SITE by clicking the ADD FREE STATS ICON @ the bottom of the page. By voting on the site, you are supporting it. No votes = SITE removal. As a lot of hard work goes into this SITE. Any files or Serials ETC not available from the SITE please submit to the email address on the page. Have fun and enjoy the DIGITAL RADIO MODES. It's about time that these software developers realise that when they charge ridiculous prices for software. They are going to force PIRACY on there selves and products. Reasonably priced software can be obtained but programmes are few and far between. If you like these products purchase them.

Regards

The AX25IP daemon for unix and more recently for Linux support UDP encapsulation of AX.25. You can find a copy of it on ftp.ucsd.edu or as part of any current Linux ax25-tools package.

regards
Terry

Any particular cause for concern?

The problem is that you'll need a significantly better
sound card to measure the output and provide meaningful
results. And since sound card output is already pretty
good (80-90 dB SNR from cheap cards), that's a tall order.

RTTY and PSK31 have minimal audio output requirements -
if the sound hardware isn't up to such a trivial task
it's defective, and will be very obviously so.

```

While the sound cards will generate and decode the psk31 and rtty tones if they are working at all, the purity of the tones may be of some concern on rtty. I don't know enough about the way psk31 is classified to speak of it, but when audio is fed into the mic input to generate rtty (fsk) it needs to be almost a pure sine wave. If the audio tones are much below 2 khz this is especially important. The reason being that if the audio is not pure then excessive sidebands are generated and that is not legal. Suspose the tones being used are 1000 hz and 1170 hz. The second harmonic will be 2000 and 2340 hz . This is within the pass band of the ssb filter. You will be sending out 2 signals instead of one. The second will have 340 hz shift. While any audio tone can be used to generate rtty, it is best if tones around 2 khz are used so the second harmonic will be out of the passband of the ssb filter.

How pure is pure?

If the application is generating 8 bit samples the theoretical SNR is 48 dB. For 16 bit samples it's 96 dB and is thus limited by the analogue circuits to the usual 70-80 dB the manufacturers quote.

If you actually get 80 dB SNR on received over the air signals you should reduce your transmit power.

Hi All,

I just got a brand new Yaesu FT-1500. I want to hook up my PK-232 TNC to its data jack. In the manual it gives the pin outs for the jack, and on the schematic it shows a diagram of the jack and the position of the terminals. However, it does not say if the diagram is shown looking from the outside or from the inside of the radio. Has anyone figured this out ???? How on earth do you solder your cable onto the pins of the mini din 6 pin plug--it's so small, and the pins are solid--not hollow like a standard din plug.

This is a valid concern, but it is not specific to soundcards.
Any system that users audio-fsk and an SSB transmitter to generate FSK
suffers from this. It is a defect in the method of FSK generation, not
a problem of the soundcard. And you will probabably have a hard time to
construct a shiftable sine wave generator in hardware that performs nearly
as good as a soundcard in this respect.

When evaluating the soundcard, it is probably better to focus on hum and
wideband noise. The linearity (which will affect what you describe as the
"purity") will most likely not be the problem. Especially because
linearity is only affected by the design of the chip, while hum and noise
are also affected by board design, cabling, ground loop issues, RFI issues
etc.

The hardwear problem was solved years ago. I don't recall if a square wave or a triangle wave is generated then sent to a low pass filter. I still have one around here somewhere I built years ago before the computers were used. Designed by Ivan Hoff, one of the rtty men around the mid 60's.

I don't have one of those, but plugs usually have the pin numbers printed next to the pin. Use a magnifier and see if you can find them.

Look on both sides.

Hello Ron,

Here at Timewave, we have not seen the FT-1500 manual so I can't give
you a tested wirking diagram. BUT if Yaesu has actually done the same
design twice in a row you'll find a 6-pin min-din DATA jack on the
radio. The jack as viewed from the rear panal is:

```
             U
      6             5
 4                       3
      2           1
```

Connect as follows

```
PK-232 radio jack                    FT-1500 data jack
Pin 2<--------------------------------> Pin 1 PKD TX data
Pin 4 <-------------------------------> Pin 2 Gnd
Pin 5 <-------------------------------> Pin 3 PKS (PTT for us old guys)
Pin 1 <-------------------------------> Pin 5 1200 baud packet RX data
```

If your data jack is not as described, give me a call at (651)
4389-5080 and I'll figure out what you need.

```

The SNR from a sound card is significantly better than
FM broadcast, and approaches CD quality. Is your hardware
modulator that good? And what about the transmitter
it feeds?

Numbers, please. Otherwise it's the same old Good-Old-
Days-all-modern-technology-is-crap line.

And a second NO vote. Any site that uses a pirate symbol and offers
pirated softwrae gets a strong "NO" and the best wishes that the site
be removed from the web. Any site with crack or krack in the URL
deserves the same fate.

Well, I have the solution to my problem. I needed to hook up my AEA PK232 to my
new Yaesu FT-1500. The radio has a mini 6 pin din socket in the rear for data.
Well, I went to Radio Shack and bought a mini 6 pin din plug--Have any of you
tried to solder 5 wires onto a 6 pin mini din plug---IMPOSSIBLE. Many of you
E-mailed me and said to find an old broken keyboard with a PS-2 plug--it's a 6
pin mini din---couldn't find any. So, I looked again in the R/S catalog, and lo
& behold, they have a PS-2 keyboard extension cable--PROBLEM HOPEFULLY
SOLVED. I"ll find out tomorrow morning when I go over there to buy it. I hope
they have it in stock. Thanks to all for the helpful hints.

Yeah, an extension cable does the trick. I got one at the local computer store for $4 when I needed one; see

http://www.dioxine.com/~dana/ft847_pkt.html

for how I made a cable for my FT-847; I suspect all the modern Yaesus use the same connector for packet.

Easy as pie.

If it helps, I have a soundcard-based oscillator and spectrum analyzer
that measures THD, S/N, etc for download on my freeware page at:

Another solution would be to pick up a 'used' mouse at the local
GoodWill Store, Savers, or the such _with_ that style plug (PS/2).
It's almost a given that it'll be defective - but, if all you want
is the cable + molded plug, it'll probably be just the ticket and
at a decent price.

Ralph Mowery <rmowery@dialpoint.net> wrote:

> While the sound cards will generate and decode the psk31 and rtty tones if they are working at all, the purity of the tones may be of some concern on rtty. I don't know enough about the way psk31 is classified to speak of it, but when audio is fed into the mic input to generate rtty (fsk) it needs to be almost a pure sine wave. If the audio tones are much below 2 khz this is especially important. The reason being that if the audio is not pure then excessive sidebands are generated and that is not legal.

This situation exists with PSK31 too. Overdriven signals cause harmonics just the same as you said above -- an overdriven 1kHz signal can be heard at 2kHz etc. It is very unpleasant to listen to. The 31Hz signal gets very wide too, very quickly.

Connects like a W2A. Look at the Baycom as I think it already has the capacitor and resistor required. You will just need to close a jumper to enable.
If not use the standard Icom wiring and apply the cap-resistor network in

the correct location. below listed is the way the two jacks are wired within the radio.

Tip is the very pointed end, Ring is the terminal that is between the two black bands and the Sleeve is the long part of the plug on the end you attach the wires to.

Mic Speaker jack

Tip - Speaker Audio
Ring - Mic Audio and PTT
Sleeve - Ground

Sub Band speaker Jack

Tip - Sub Band Audio
Ring - +5 volts @ 3mA for powering the HS-60 headset, does not hurt if shorted by a monoural plug
Sleeve - Ground

Generally you use a 0.47 uF cap in series with the TNC audio line a 4.7 K Ohm resistor in series with the PTT line, connecting them both together at the Ring terminal of the Mic Speaker jack. If the Baycom does not have this network built in I would build it in a very small box and just attach to the speaker and the mic terminals, use the 2nd jack for the ground connection unles you are real good at making wire connections to a 3.5 mm stereo plug.

Make sure the power saver feature is disabled on the W2E

Hello All,
I have 4 Mk 2 Tiny 2 PaCcom tnc's that have no Eeprom's
I have a burner and the blanks but no firmware to put on them.I
dont have to have the latest greatest firmware just something that will
work.The club budget is very small for this project
and we cant really afford to buy the new version 5 firmware
chips for 4 tnc's If someone could point me in the right direction
I would appreciate it very much.
Thanks and best regards

I just acquired a KPC3 (version 6.0 firmware). I already own an MFJ 1278B. With my MFJ, I can leave the squelch open and the TNC knows that there is not a digital signal being received until one is actually sent. With the KPC3, if the squelch is open on the receiver, the KPC3 will not allow the xceiver to transmit until the squelch is closed. The MFJ way seems to be superior, but I cannot believe with Kantronics reputation that they had not improved their TNC's to have true DCD. Am I missing something in the Kantronics command set, or is this indeed the case.

Thanks,

Duffy

Another perspective:

I have dealt with Mr. Knowles and his companies for the last 16 years on a
fairly regular basis. I have always found them to be responsive, competent,
and responsible. Hopefully, whatever went wrong was the exception rather
than the rule.

Just my opinion.....

Duffy,

Send the command CD SOFTWARE for use with open squelch.

The default is CD INTERNAL which requires a squelched circuit.

If you need the manual, they have the KPC-3 Plus manual on the Kantronics
site.

http://www.kantronics.com

Greeting fellow Warblers.. happy to announce that MixW RC11 has been finally uploaded to the American Site which is www.nvbb.net/~jaffejim/mixwpage.htm
Due to a Virus attack at our Kiev Site there was this delay... This is the complete list of changes made to MixW software... RC#11 expires on the 1st of October.. happy warbling.. and good luck.. Jim, WA2VOS

MixW version 2 Release Candidate 2

SSTV mode
SSTV is accessible from menus
History tab is added
CAT changes
IC 756 PRO has been added to the list
FT 847 PTT bug fixed
ICOM PTT via CAT COMMAND implemented
MACROS <CATCMD:asciicmd> and <CATCMDHEX:hex bytes> are added. Example of usage:
<CATCMD:FE FE 56 E0 1C 00 01 FD>. This let you send any CAT command to the

TRCVR.

Log bar

Lookup call button (Alt+K) has been added

New macros

<SELCALL>, <SELNAME>, <SELQTH>, <SELRSTR>, <SELRSTS>, <SELNRR>, <SELNRS> mean the same as <CALL>, <NAME> etc but for selected line in the log bar.

<CATCMD:asciicmd> and <CATCMDHEX:hex bytes> (see CAT changes)

MixW version 2 Release Candidate 3

-(!) INI files are no longer stored in WINDOWS folder.
  Move all MixW*.ini and all .mc files to MixW folder.

- SSTV
  - Crash bug has been found and fixed.
  - Right click on history bitmap shows it full-sized (only if it was auto-saved)
  - R36 and R72 modes added
  - Settings dialog is modified. AutoSave and Open Picture do not work, will add them tomorrow before annoucing RC3.
  - Video ID
    - This is a new feature to transmit Video ID visible on the waterfall Since the power is divided by all points transmitted at the same time, do not make long horizontal lines.
    - Two VID samples re added : butterfly.bmp and mixw.bmp
- MACROS for SSTV:
  - <FONTFACE:nnnn> example: <FONTFACE:Arial>
  - <FONTCOLOR:n> example: <FONTCOLOR:9>
  - <FONTBOLD:n>   example: <FONTBOLD:1>
  - <FONTITALIC:n> example: <FONTITALIC:0>
  - <FONTSIZE:nn> example: <FONTSIZE:26>

- CAT
  - added Comport conflict extended diagostics
  - FT817 support
  - the number of ICOM models is extended to 33
  - possible custom CI-V address for ICOMs

- Search dialog (glasses)
  - global optimization.

MixW version 2 Release Candidate 4

- MT63 mode

Sideband inversion is not supported for MT63 yet, QRX for RC5.

MixW version 2 Release Candidate5

- new DxCluster dialog
- SSTV ZOOM window
- New macros added:

<MODE> prints current mode
<KHZ:n> Frequency in kHz with n digits after decimal point
<KHZ> the same as above with n = 0
<MHZ:n> Frequency in MHz with n digits after decimal point
<MHZ> the same as above with n = 1

- Some bugs fixed

- Expiration date is set to June 30.

MixW version 2 Release Candidate 6

- RTTY 850 Hz shift must work now
- MT63 now allows not only 500 Hz start frequency
- DXCluster wrong mode selection bug is fixed
- ... and some more less important bugs are fixed including one registration-related.

MixW version 2 Release Candidate 7

Added:

- Added CWR and FSKR transceiver modes to drop-down mode menu.
- Added <SPZOOM:n> (n=0.5,1,2,3 or 4) to set spectrum/waterfall zoom.
- Spectrum/waterfall shift position is now saved (and restored :-).
- Added <INV>, <INVON> and <INVOFF> macros to quickly change inversion.
- 8-bit encoding in MT63 mode is added (see MT63 settings dialog),
- Contest Settings: added Check Dupes regardless of Band or Mode check-boxes.
- <LASTCALL> macro (not in list), unlike <GRABCALL> captures last call appeared on the RX screen.
- CW weight correction (in 1ms intervals) to compensate CAT CW delay. (+1 to add 1ms delay, -1 to subtract 1ms, and so on.) See CW settings dialog.

Bugs fixed:

- Auto Search Log name and QTH bug is fixed.
- AFC in MFSK in full duplex mode stopped.
- <ALIGN:nnn> on LSB bug is fixed.
- Several contest bugs are fixed, but contest mode is to be re-written.

MixW version 2 Release Candidate 8

- New soundcard module with much better RX stability in heavy multitasking environment.
- Manual RX is supported for SSB and CW with usual highlighting, call grabbing etc. (For CW: goto Mode settings/Rx Algorithm/Manual)
- Multiple call registration is available
- Mode specific info is displayed in the status bar.
- some minor bugs were fixed
- expiration date for non-registered users is set to July 14.

MixW version 2 Release Candidate 9

- CW Old MixW 1.45 alg added
- SSTV Picture Preview in load picture dialog
- SSTV Tx load history tab
- TUNE transmitter menu item
- NEW MACROS

<WPM:nn> <WPM+nn> <WPM-nn> - for CW, absolute and relative speed change
<WPM:RX> Make TX speed equal to RX
<LOADPICTURE:filename> - if folder(directory) is on the place of filename, RANDOM picture from that folder will be loaded.
<TUNE> - start tuning tone
<STOP> and <ESCAPE> - equivalence of keyboard Escape

- TEN-TEC PEGASUS support via external file (external PEGASUS control software is required.

In PTT&CAT dialog, select CAT=TEN-TEC, Model=Pegasus/Jupiter, Software path = directory of Pegasus software, like D:\PEGASUS .
In PTT&CAT Details sub-dialog, choose a port number for PTT control and DTR/RTS behaviour (baudrate etc. does not matter).
Run the software (BBTRX1.EXE).
Then MixW will read and write transceiver frequency and mode.
* RTTY via transceiver FSK port:
Go to Configure > Secondary PTT/RTTY port menu.
Check "Use this port for RTTY output".
In Port Settings sub-menu, set up port number and RTS/DTR pins (other settings do not matter).
In PTT&CAT dialog (from Configure > TRCVR CAT/PTT menu), enter FSK center frequency (according to your transceiver type and settings).
In bands.ini file from MixW directory, add lines for each band you want to use with hardware RTTY, like
20m RTTY FSK 14065 14112 14080
where 20m = band name, RTTY = real mode, FSK [or FSKR] = transceiver mode used to operate RTTY,
14066, 14112, and 14080 = start, end, and preferred frequencies. (With such lines, MixW will switch rig to FSK [or FSKR] mode for RTTY by default.) Then restart MixW to let it re-read bands.ini. RTTY output will be sent to this COM port and to the soundcard in parallel.

MixW version 2 Release Candidate 10
Tip of the Day window is added. Please suggest new tips!
(You may also edit tips.txt file from MixW directory.)
See ExtProg.html to learn about interfacing MixW with other programs (short VB samples are included):
- Printing QSL cards;
- Passing QSO data to external loggers;
- Passing data to external maps;
- Switching/rotating antennas;
- Custom callbooks.
Contesting for Monkeys article tells about an example of using MixW in contests. See MonkeyOp.html.
New fields are added to the log file:
- Domain (state, etc.),
- IOTA,
- county,
- QSL manager.
Callbook fields can be viewed via DDE when Callbook dialog is open.
See MixW DDE test.doc file from MixW directory for details.
Two user-configured Log bar layouts are added.
See Configure > Log bar > Custom 1 & 2 menus. Resize Log bar columns by their gray headers. Double-click on the border of a header to restore it's original size.
Contest mode: separate menu (View > Contest mode > Activate contest mode) is added to turn on/off contest mode.
- Domains, states, etc. (see Contest settings dialog) are now grabbed to Domain field or Serial NR (see "as Domain" and "as Number" switches);
- Contest time is now grabbed to Exchange Received field and added to the exchange number, like '001 1532' (001 is a

number, 1532 is grabbed time). In Search Results dialog, click Callbook
button to open the Callbook dialog for a selected
callsign.
Export to Cabrillo format file:
2 formats are now supported:
- rst + number,
- [number] + name + domain (NAQP contest etc.).
Export to text files:
New log fields are also added to export list. Using a text editor, exported
TXT file can be converted and
sent as a contest log.
Icom transceivers:
CWR, FSK and FSKR support added;
Configurable output amplitude for each mode. See Mode > Output amplitude for
this mode menu.

MixW version 2 Release Candidate 11
Due to Virus Attack at our Kiev site there will be a delay on changes on
RC#11 so far Scottie DX TX bug has been fixed.. will advise on others..
Best 73 and happy warbling.. Jim, WA2VOS

Hi all,

I recently installed a packet station and have wanted to get it going under
Linux for some time now. However I can't seem to find any decent software
for running the TNC. The closest I've found is LinPac, which is nice but
buggy. I've also tried Minicom running with the TNCs firmware which is a
solution, but not the ideal one.

So, any suggestions? I'm also looking for software to set up packet cluster
retransmission from internet to packet if anyone knows of any.

"The ideal packet program" differs very much between individuals. What I call ideal may be something completely different from what you like.

You could try the HAM linux software site: http://radio.linux.org.au/

Mario try this site and let me know how it works out, I'm also trying.
Will let you know if I have any luck.

Hello All.

I am desperate to find the circuit diagram for a KR400 Kenpro Rotator.  If
you are able to help could you e-mail me at zl2bmh@infogen.net.nz.

Because of a medical problem it may take me a fortnight or so to get back to
you.

My home address is...Jim Irving
                                      38 Lawry St,
                                      New Plymouth  4601
                                      North Island,
                                      New Zealand

Many thanks..Jim

Hi,

I hope you can help me out or at least point me in the right direction.
I've
got a Kenwood TH77a that I'm trying to coax into using for mobile APRS.
I
followed the directions on your site and everything appears to be wired
up
properly, however, the audio output by the radio is EXTREMELY low.   I'm

just doing a comparison by ear (which I know isn't very accurate), but
if
I set up a monitoring station and have it set a volume level that's fine
for
listening to other stations, I can't hear anything from the TH77a. If I

crank up the volume on the receiver, I can hear the tones from the
TH77a, but
then other stations are WAY to loud. I've tried adjusting the audio
trimpot
on the TNC, but even if I max it out (which should be overdriving the
xmitter)
I still can't hear the audio.

Any suggestions?

Thanks and 73,

Mark

Mark,

If you are using a Kantronics TNC, there is an internal jumper that you have to set correctly to use with some HT's on the market. You did not indicate the TNC you are using.

Does anyone know how to select port 2 in KISS mode with a PK-900?

I would have assumed that it was the same as Kantronics - OR the KISS
command byte with 16 - but I've been told that doesn't work.

Duffy,

Sorry for not posting what TNC. I've tried this handheld with a variety of TNCs: PK88, MFJ1274, and a TinyTrakII. The TinyTrakII is the one I'm really interested in getting this handheld working with. All of the above exhibit the same behavior.

Hello Roger,

KISS $00 Kiss disabled
KISS $01 Standard kiss
KISS $03 Extended kiss
KISS $07 Extended kiss plus polling enabled
KISS $0b Extended kiss plus checksum enabled
KISS $0f Extended kiss polling nd checksum enabled

NOTE: When KISS is enabled both ports are in KISS mode

Hope this helps

Thanks for that, but once KISS mode has been selected, do you how KISS
frames are addressed to port 2 as opposed to port 1? (See my comment
above about how it's done with Kantronics TNCs.)

I have tried emailing Timewave tech support, but so far I haven't even
received an acknowledgement. I don't suppose there are any PK-xxx
manuals on line anywhere?

Have a PK-88 that is not working I just acquired. The book calls for
an 8530A hdlc. This one has a Z80 SIO in it. The board is marked for
the other ic numbers but not this socket. Anyone know if this is a
production revision? The tnc shows only power, trans, and conv led's-
no mult led on, no output on rs232 port. Thanks!

Unless I'm mistaken, an 8530 and Z80-SIO identify the same chip. 8530 is Intel's version.

The Z80-SIO and 8530 do identify the same chip, and Zilog-produced parts typically sport both identifiers. Second-source 8530s are typically only marked as some variant of 8530. The Intel version was originally the 82530, numbered as such because, at one time, all support/peripheral support chips from Intel had the prefix 82 in the part number (8251, 8212, 82586, 82092, etc.).

Perhaps the only gotcha to look out for is to make sure you have a part rated for the correct clock speed (4MHz family for PK-88 if I recall correctly, even though the Z80 is a little over-clocked at 4.9MHz).

You are mistaken.

The Z8530 is a later version of the Z80-SIO, which has some kind of upward
compatability but cannot be regarded as pin-compatible.

The original TNC2 and clones have a Z80-SIO. The later models that do not
run the same code often have a Z8530, as do most SCC cards.

No, the Intel variant of the Z80-SIO is called 8274, but it is not
pin-compatible either.

Dunno.  Try spamming a few more groups, maybe they'll have an answer for
you over on alt.crossposting.nitwit.

Hi guys.
```

I keep a collection of radio orientated software's on my site from things
like

PSK,RTTY,SSTV,HELL, STREAM, THROB, CW, METEOR SCATTER, E LAYER, UTILS, AND
SOME CIRCUITS. AS WELL AS PC SOUNDCARD TO RIG INTERFACES ETC.

Take a look see, I hope you find something useful.

http://www.g3vfp.com

Best Regards,

Dave G3VFP

I bet a good used TNC will be hard to find but If there is one out
there for sale, please email me with price and condition.

Thanks, Norm

>of.

That could be, I have no Intel databook of that era.

However, note that there also exists a Zilog 85230 (and 85130), these
are quite compatible with the 8530 but have larger FIFO's, some minor
extra features (rendering the external divide-by-32 unnecessary in typical
packet applications), some bugfixes, and some new bugs.

These are to the 8530 as the 16550A is to the 16450/8250.

Rob

Well, I think you're thinking of the Z8030 in the Z8000 case, but I'm
not going to bleat too loudly since I already confused the Z8440 with
the Z8530 ;-)

We're digging around in what is effectively ancient history, this is
tough on the old brain cells.

Upon further contemplation, I believe the Z8530 was called only the "SCC", without the Z80 prefix, but I do recall both the 8030 and 8530 and really don't recall how much of substantive difference there was between the parts.

I suppose it's also errant to speak of the SCC in the past tense, since the SCC family is still alive and well in a number of forms.

Mr. Miles,

I'm very sorry if I have offended you. I did not relies that cross posting to more than one news group was considered spamming. OR IS IT?

I was simply trying a common sense approach to reach as many people as I could with a one line question.Which by the way was answered by many,both by postings and email.

Again thanks for your unkindly comments. I did ask for any and all.

N1RZB

Hello All,
I have uploaded a new beta version of W1SQLPSK. Version 4 is full of user recommended changes and enhancements. I have also uploaded a new sample call book data file as well as a full eCallBook of over 800,000 current call signs. This version is a release candidate and should work fine as an upgrade or new install. However, as with any upgrade, you should be sure to backup you current files before the installation.

This is a pre-release copy. As such, please report any problems so that we can get them cleaned up as soon as possible.

Here are some of the features that are available in V4:

Improved macro setup and maintenance. Now you can change them on the fly.
Additional logging fields.
Improved configuration menu.
Added the ability to copy data from the receive window to the log fields as well as the clipboard.
Improved call sign lookup. Lookups now show previous contact and QSL status for each band by state.
Added a most wanted feature to remind you of key stations. This can be used to help find special events stations or DXpedition station.

Please check http://www.faria.net/w1sql for all the information and the latest on-line help at .

73 & enjoy,
Joe

Can someone please tell me what the default power-on TNC-computer data
configuration settings are for the 1270B? Thanks...

It depends on your system power and what you want to spend.

A product named VMware (www.vmware.com) allows you to run Windows as a task
under Linux. It allows you to have several copies of Windows running, each
accessing a different soundcard as "the soundcard", while running other
programs natively under Linux.

This is a commercial product, however. And it will require a reasonably
modern PC in terms of CPU power and RAM size. So don't try this on a
32MB P133.

Rob

Hi.

If you are looking for modes like PSK,RTTY,MFSK,SSTV etc etc that utilise a PC's soundcard with your radio, then take a browse.

http://www.g3vfp.co.uk
or
http://www.btinternet.com/~g3vfp

Lots to choose :-).

Regards,

Dave G3VFP

They're all good. I like the one at http://www.packetradio.com best, because of the option of getting it in kit form. You save about half the expense that way, and its another good excuse to warm up the soldering iron and have a little fun. - Or you can buy it fully assembled and tested for "plug 'n play".

```

I have a PK232 unit that I have hooked up to a Kenwood TM-221A, and a terminal.

I can receive stations packets, BUT can not connect.

I have done as the book states:
Radio off

MYC AAA
C AAA

-It just times out.

If I have the radio on with my call sign set in the PK232 the transmitter keys up. But I can not connect to any station, including myself.

What can I do?

I took it out of 3 years storage and put new batteries in it (Zero corrosion).
I have re-seated the chips.

Is it time to toss this PK232 out and get a new controller?

Please Help

Zack

Greetings,

I am attempting to install a MFJ-9600 modem into a MFJ-1274C and I am having some problems, where the STA and CON lights stay on and also the DCD light stays on....I have installed these units in a 1270B, 1278 and 1274 successfully. Is there anyone out there that might shed some light if there are some special problems with the C models installation.

This 1274C also has 128K mailbox ram and real time clock installed. I noticed I also have a problem resetting the parameters to default, as disconnecting the Battery, and also shorting JP23 does not seem to help. Is the extra RAM and time clock, etc effecting this part?

Any help or suggestions would be appreciated.....

Make sure the "XMITOK" paramater is turned on. One time I couldn't get on the air, and that turned out to be the problem. Dunno how I had managed to mess it up in the first place, but apparently I did.
It kept the PK-232 from keying up my rig, also a TM-221a like yours, by the coincidence.

If this ain't it, I hope its somethinhg else just as simple and easy to fix.

No, it didn't key up at all. I remember wasting a certain amount of time
re-checking the wiring of the mike plug for the rig, and so on. This was
close to ten years ago. It turned out to be the XMITOK parameter, if I
remember correctly. I turned it on, and then everything worked fine.

I never did understand how it got turned off in the first place. I probably
did it myself, and just didn't remember. Nobody else ever messed with the

TNC, so the list of suspects was narrowed down considerably. It was either
me, or the poodle that did it.

XMITOK is ON.

The radio does key up.

Please note that I do not have the mic, as I bought the radio used
just for packet, 6 years ago and the unit worked fine up till now.

Isn't that the loopback test? If so, have you joined the green and white wires? If your trying to connect to your own callsign (AAA in this case), via the radio, you'll never connect unless you go through a digipeater or node.

I have been registered user since 2.0 and used it daily.
The decoders and visualisation are top class and the RX/TX user interface
also improved a lot in this latest release supporting macros etc.
Also there has been new modes and functionality regularly in their new
releases (typically between 3-4 months)

Anyway, you can try their previous release 2.3 (found also their web site
http://www.skysweep.com/download_frame.htm) for 10 minutes in demo mode (all
functionality except new 2.4 functionality) just to check how it works.

Here are some ideas:

1) Hard reset the unit (JP-1)
2) If you have a spare radio cable short the green and white wires together and put that cable on radio 2

Note: If you don't have a spare cable, the jumper on JP-1 just fits across the tyransmit/receive pins on the PK-232 radio port

3) Put AAA in mycall VHF Packet
4) select packet mode and connect to AAA
5) Set the AFSK out setting on the back of the unit to 12 O'clock
6) Check the filter settings by runing the Calibrate command

If this does not work Give me a call at Timewave (651) 489-5080

Check and make sure that the wires are firmly seated in the 5-pin cable
connector,
especially the white one which carries the audio tx.

If you have a PK-232 or PK-900 check <http://www.timewave.com> for the
soundcard interface upgrade. PTT and comlete isolation for BOTH audio
in and out to the soundcard.

Hello Billy,

Timewave sells the DSP upgrade for the PK-900 as you suggest. The
reason we can not sell older firmware upgrades is because of the
design of the PK-900. Each revision of the firmware is "tied" to a PAL
chip on the main board. When we got the AEA support material, the old
versions of the firmware were not included.

Since the DSP upgrade replaces the PAL chip we are able to upgrade any
older PK-900. If you send me the old "bad" eproms, I can see if we
have a version that works.

Hi,
I have need for a 3 stage and a 7 stage counter that will pass a hi
state (or low) successively each time a pushbutton is pressed. My
knowledge is RF and digital is a bit murky. Anyone have any thoughts?
The application is to select one of 7 bandpass filters in a receiver
front end through successive pressings of a single pushbutton.

Thanks,

Dale W4OP

There are Linux programs available for PSK31, SSTV, and
all sorts of other noises you can make with the sound card.
Why not use them instead?

Linux apps usually come as source code, but that means
you can mess with it and modify it as you please. If
you don't like how a program works, fix it. If the program
you need doesn't exist, write it.

John,

I see the sound card upgrade for the PK-232 on the timewave site but no
mention of an upgrade for the PK-900.

Is one available?  If not, when will it be available?

Rob

I'd like to be able to access internet email via HF while traveling in
our motorhome. So far all the info says I'll need an expensive ($350 -
$1000) TNC to do so. Have any of y'awl done any experimenting with
Pactor 1 or 2 via sound card on the net that provides email? I'm
reasonably familiar with the internet, computers and radio but the combo
is new to me.

TIA and 73

Just ordered mine 2 days ago, Ive built a couple different interfaces
and didnt like em. This kit looks the best and well constructed. Im
hoping its all its cracked up to be :).

You have discovered the "sad little secret" of the Microsoft Windows
architecture. With all the recent releases of WINDOWS 95/98/ME/NT and
on and on, the program does not have precise control of the com port
and thus is not able to implement PACTOR as a sound card TX/RX program
because of the strict timing requirements of the mode.

For Pactor folks TNCs will continue to be part of the system until
some one implements the Pactor protocal on a non windows PC.

And Pactor II is a proprietary protocol that is implemented in the PTC-IIe TNC. It is unavailable in other configurations as I understand it.

On the other hand, MixW2 lists Pactor (I) as one of the modes it implements . . . it is a Windows program.

I believe the Pactor-I implementation is "receive only" in MixW2. To
my knowledge nobody has yet been able to implement Amtor or Pactor ARQ
modes in Windows due to the timing constraints. Receive is possible as
is FEC.

I think you are correct, Bob. I just got MixW installed last evening and
have not had time to get to know much about it.

The program also lists Amtor as a mode so possible it is FEC reception only
on both modes.

Guess the consensus is Windoze won't permit it. Bad news but thanks much
anyway; saved me a lot of wheel-spinning.

Hi, all.....

Sorry if this is possibly off topic a little, but I'd like to use
linux for ham radio applications as well as for general use. There is
a growing catalog of linux apps for hams--psk31, logging, etc.

My question: I'm new to linux---have the software (Redhat ver7.0) and
have 2 hard disks on my machine (1gig AMD, 256ram, etc), each 20gig.
Haven't loaded the linux yet. I like the idea of confining each OS to
it's own HD. Won't have to worry about re-partitioning, etc.

Has anyone done this? Do you use LILO to dual boot? How do you install
this and how do you boot up, etc?

I know there are probably tutorials available.....Could anyone point
me in the right direction?

Thanks !!

Easy to do. Assuming that your other OS is Windows, check this:

ftp://metalab.unc.edu/pub/Linux/docs/HOWTO/Linux+Windows-HOWTO

LILO will handle it nicely and comes with good documentation. Another possibility is GRUB.

Bob

This is no problem, just connect the second disk and install the
system, specifying where you want to have it.  Let it install LILO on the
first disk and tell it you want to boot the OS on that disk as well.

(I presume RedHat will guide you through the process about the same way as
SuSE does, it should show you what disks you have, how they are partitioned
now, and ask you where you want to put Linux)

This is a warning notice to all in radio land about a test equipment company located in Auburn, KY.   They are Auburn Metrological Labs at 12345 Bowling Green Road, Auburn KY. 42206. Their number is 270 542-6000.

Based on information given to me by their General Manager, Ken Knowles, they would be able to repair my Cushman CE-50 that was having a receive problem. It generated fine and all pll were locking fine.   They gave me an estimate of under $300.00 with a turnaround of about one week.   I sent it to them for repair on February 24, 2001 based on this information.   After a couple of months went by without even an acknowledgment of receiving it, I tried to contact them by telephone and email. Still I received no information on it and after numerous emails and a couple of letters, one being a legal demand letter, the unit showed up at my door with a 110.00 COD charge.   After contacting the company I was advised that Ken Knowles was on vacation and the service manager was arrogant, rude and even hung up on me.   If you value your equipment and it is in need of repairs or calibration, PLEASE do Not send it to them.   You will regret it.

My options, against them, are not exhausted but I would rather have never had the problem to begin with. It has the tendency to taint all repair facilities. This outfit was recommended by a person from one of the amateur news groups. I hope I have prevented any grief for others by this post. Thanks for listening to my ranting. 73's Don Smith

Sorry Donald, I really do not understand your need to express your views here. As I read your post you paid $110 when they estimated "under $300". We have your side of the story and I do believe you version, but I think it is fair to have the other side. I am involved in servicing and while perhaps 95% of all repairs are straightforward, some do go wrong. I'm not really trying to give excuses, but some of the problems I have encountered include.
Leaving a message at the contact phone number regarding repair and they do not pass it on (they will never admit this later).
Wrong phone number supplied.

No response to phone calls (or message left). Please understand I may have 50 repairs at any one time and I can not call each client 5 times daily (work it out).
Email can be impossible. I often receive over 300 messages per day. How can I read or replay to them all and still have time to repair your radio?

I have also hung up on callers. Some can never see reason.
No doubt others have had bad servicing experiences, but many will have good ones. We will always hear the complaints.

Best Regards
Neville

Dear Neville,

If you are as busy as you say, you owe it to your customers - and yourself - to hire help... if only office help, to keep open the lines of communications between you and your customers.

The key word here is *service*! To do this, you must be able to take a true interest in your customer's concerns, then make every effort to satisfy them. After all, you are in the business of offering a service - not a bad experience.

Methinks the service folks who have attitudes similar to yours_are_part of the problem; it's always the *other guy's* fault - never yours. Have you ever considered the possibility that_you_may be the one who is lacking reason? In any event, hanging up on a customer is as un-professional as you can get!

In the final analysis - when your service business fails - you will have no one to blame but yourself! I hope you come to your senses before that happens...

Hi Chaos

Yes, I will happily do as you suggested, as long as you will accept twice my
normal charges. No, I never suggested "other guy's* fault - never yours"
No I do not accept "In any event, hanging up on a customer is as
un-professional as you can get!"
Would you like to work in my workshop for a week?
PS I have been is "business" for more than 30 years Have You?

Hello Neville,

Unfortunately, I cannot accept your justifications... obviously you either reside in a well populated area - else you would have run out of customers by now - or you exaggerate the time you've been in business... without any office help!

In no way would I work in someone's shop again... I moved past that 30 years ago when I went back to school for my degree. At that time I was the national service manager for a well known international corporation.

As far as my business background, it is extensive...

It's obvious you see nothing wrong with your business attitude, therefore I see no reason to continue this thread. Good Luck!

When you turn the machine power on, you will be given a choice of OS.

Two physical disks make the dual-boot life easier.

Pay close attention to the names of various devices and partitions. hda,
hdb, etc. That will give you more confidence when it comes to partitioning
your drives. I also use two separate disks on my desktop. This makes life
easier when Windows needs reinstalling, since I have one of those blasted
"restore" disks that will try to reformat an entire physical hard drive. My
laptop is living more dangerously, dual-boot with a single HD.

Who doesn't Winifred bind bimonthly? I annoy loud keyholes near the flat secret store, whilst Madeleine monthly substantiates them too. Just outwiting over a buillon at the data bus is too rough for Darcy to corrupt it. Other sharp junk discs will eliminate easily behind

Pascals. Until Amber saves the scanners rigidly, Woody won't transport any stuck CERTs. It's very filthy today, I'll compile fully or Eve will engulf the newbies. What will we confront after Raoul learns the abysmal station's interrupt? If you'll buy Jim's CIA with llamas, it'll halfheartedly infect the analyst. The discarded dumb data havens partly preserve as the orthodox TCP/IPs dump. Catherine will generally disconnect about Ron when the cosmetic packages spool at the quiet SOCKS. Willy, have a worthwhile text. You won't dig it. While condors deeply consume admins, the tablets often disappear in back of the unclassified laptops.

What will we get after Annabel types the official website's condor? Tell Rose it's dumb training in back of a newbie. I'd rather eat undoubtably than propagate with Marion's lower firewall. Edwin wants to stop bimonthly, unless Robette spools PERLs without Angela's buillon. If you will vexate George's market about noises, it will angrily jump the procedure. If the rough newsgroups can learn usably, the tall secure shell may prioritize more buffers. If you'll dig Joseph's watcher with ISDNs, it'll rigidly inflate the trackball. Go relay a analyst! As steadily as Marian floats, you can infect the gorilla much more superbly. Better contribute fax machines now or Angela will generally transport them to you. Orin will easily interface in back of Liz when the junk cryptographers take behind the ugly Net Bus. A lot of ignorant robust texts will deeply kill the tablets. It compiles, you format, yet Clint never partially binds without the mailbox. While JPEGs truly pump RAMs, the emails often fetch under the shiny rumours. Other unlimited solid iterations will flow halfheartedly over data havens.

Who bursts finitely, when GiGi outwits the specialized laptop over the SOCKS? If the weird firewalls can locate partially, the bronze ActiveX may preserve more articles. Go learn a thought! Anastasia propagates, then Jessica slowly inflates a untamed PERL beneath Neil's website. Occasionally Excelsior will dig the gorilla, and if Martin rigidly washs it too, the credit card will vend with the opaque field. To be idle or orthodox will smile idiotic stacks to finally corrupt. Where doesn't Jonathan connect wastefully? We amazingly exclude for erect sharp sneakers. When will we load after Richard gets the retarded tape's procedure? Otherwise the backdoor in GiGi's UDP might question some rough routers. What did Pete take the connector inside the major interrupt? It moans, you disappear, yet Ratana never weekly annoys under the database. I'd rather save usably than prioritize with Chris's extreme ethernet.

Neville,

I think you miss the point.  If the person doing the service quotes that the
work will be done in a week or whatever, then misses it by a factor of 10,
then the person did not live up to the agreement.  The man's point is
correct, you are in a service business.  Deliver the service that you
commit.  If you tell people if will take months at half the price, then so
be it if that is what they accept.  No one appreciates a commitment that
cannot or is not, delivered.  And yes, in some cases, I would pay more to
receive good service.  Poor service at half the price is no deal in my book.

```

If you don't mind booting to DOS, you can use RITTY version 2.38 for PACTOR 1 using a sound card. It is a great program but you need a TRUE Sound Blaster card (no clones). Since it runs under DOS, there aren't any timing problems.

It is my understanding that Brain K6STI still sells licences to version 2.38 of RITTY. (The later versions only support RTTY).

Xref: archiver1.google.com rec.radio.amateur.digital.misc:3359

Hello, All!

CwType 1.10 was published at http://www.dxsoft.com and

http://www.hamport.com

It is the terminal program for CW-operators. You can transmit both from the keyboard and from the paddle connected to a joystick or LPT connector. While operating in paddle iambic mode sending (the memory of a unit of the symbol) is possible. The handle of the transceiver (PTT and CW keying) is made through one of the COM- or LPT-ports. Can cooperate with RZ4AG AALog logger. Freeware.

CwType Versions History

V1.10
 A bug was fixed. ~[rx] , `[rx] and `[pa] macrosequences didn't
 work when "User-defined Charset" option was selected.
 The "Setup->Beacon Off at Paddle Press" option was made.
 CwType can get data from another software to transmit now.
 Data exchange can be made by DXSOFTEX.DLL library.
 See http://www.dxsoft.com/dxs-exch.zip for details.
V1.05
 A minor bug was fixed. The program did not restored saved speed when
 inter-letter space was not equal three.
 The "Setup->OnTop" menu item is used in place of "OnTop" button now.
 The "Setup->Iambic Mode" menu item is used in place of "OnTop" button
now.
 New "Beacon" button switch on beacon mode now. In this mode Alt-F12
macro
 is executed periodically. The period is defined by the regulator on
the left
 of the "Beacon" button. The shortcuts for "Beacon" button are Alt-B
and
 Ctrl-B. The macrosequences ~[bon] and `[bon] switch beacon mode on,
 the macrosequences ~[boff] and `[boff] switch beacon mode off.
 The macrosequences ~[lsN] and `[lsN] can be used to select
inter-letter space
 now. There N is desured space in dots.
V1.04
 User can select charset of transmitted symbols now.
 User-defined charset can be used also ("Setup->User-defined
Charset").
 In this case charset is defined by simple text file.
 See example in SAMPLE.CWT file.
 When the "TX On at keyboard press" MOX option is enabled, a
transmitter is
 switched on if at least two symbols was entered.

Does anyone know of any WinAPRS documentation that may have been written by a thrid party and not the authors? I find the documentation written by the software authors to be rather poor. If anyone knows of another source, I would appreciate it.

Thanks!

So true. Most manufacturing is done by machine anymore, and most items
are tossed instead of repaired. Us hams are about all that's left.

The really sad part (to me) is that a growing number of hams don't
even own a soldering iron.

If this rig is like the IC22S I have (and I think that's likely), unless someone has done mods to it, there are no wires to the acc socket on the back. Icom left that open for whatever use one might put it to. On mine I added some wires to go to an external box (using diodes and individual switches) that allowed me to access more than the 23 channels on the selector switch. Also, the 22S, without mods, did not go below 146 MHz. Basically you're looking at a rig that's in the neighborhood of 18 to 20 years old which might not be worth it to mod for packet.

I used to have one of those, but has been a few light years ago. I bet that plug is for the remote freq controller. They sold an option that would let you run an external "mechanical counter" like the one that is on the radio for remote freq control. I bet thats what the plug is for. There may be other options also, but I forgot em... MK

I came across this web site. It has loads of Digital mode software packages.
Including all the latest modes like PSK31. Some very useful programmes for
logging Etc. It claims to be the biggest on the WWW.

Does anyone have the CD key for the ARCP2000 control software for the
Kenwood TS-2000 (I downloaded v1.1 from the Kenwood, Japan site)?

Or does anyone want to sell a copy or trade for some other control software?

What amazes me is that I asked a question and did not get one truly on
topic response.
  The first responder was at least trying to be helpful by suggesting a
different product not having had any experience with the MFJ product.
Everyone else has gone off onto a digression on whether hams today can
solder.
  The MFJ product potentially is a very convenient item for me since
just having had eye surgery I am not about to do any soldering. I
currently have a (home made) serial port interface but a Sound Card
interface is a better match under Windows. While I do have the receiver
audio going to the Sound Card (unisolated) I have never connected the
audio output for transmit. Therefore the MFJ unit looked like a
convenient way to accomplish the connection (without soldering).
John
For what's its worth I'ii bet I have built more homebrew items over the
past 40+ years than any of the complainers. Yes I did resent the
comment as a slur made without knowledge of circumstances.

FA: HP 4952A Protocol Analyzer, UNUSED, w/option 2

SEE IT and bid on it, here: (Auction ENDS on July 30, 2001...)

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1619851131

FOR AUCTION: Hewlett Packard 4952A Protocol Analyzer with Option 002 (extended memory). It is in excellent cosmetic condition. It also includes option 103, the HP 18179A RS-232C/V.24 Interface Pod with full breakout box, plus three data cables and the power cable. I tested the unit for power-up, and it appears to be fine (see pictures on ebay.com). I don't have the manual, so I didn't know how to test it any further. The paperwork that came with it from a mil-surplus auction says its Condition Code is *A*, which means new or unused. So, it is apparently unused. The HP serial number is 2726A 01189. If the unit is DOA, the buyer will have a 10-day right of return, with a full refund of the high bid amount. Reserve Price is $419.

TECHNICAL INFORMATION:
The 4952A Protocol Analyzer is a portable analyzer used for troubleshooting during installation, maintenance, and design of data communication networks and equipment. Protocols include Async, BSC, SDLC (NRZI), HDLC, X.25, SNA, DDCMP, and user-defined protocols, also tests X.21 and ISDN. Allows you to monitor and decode data transmission, test remote facilities from your location, simulate network components, and perform bit error rate tests. It can also be used as an asynchronous terminal or to install and maintain 3270 equipment, and to perform link level performance analysis. Manufacturer's Options: Option 002 = Extended Memory, Option 103 = 18179A RS-232C/V.24 Interface Pod with full breakout box.

SEE IT and bid on it, here: (Auction ENDS on July 30, 2001...)

Why not buy some wire and connectors from Radio Shack
and roll your own? How have hams become so dependent
on others even for simple stuff like this?

A good question. Here, IMO, are some answers:

1. Generally, bought stuff is better constructed than homebrew.
2. Cheaper, too, when considering time spent chasing down parts.
3. Better resale value than homebrew.
4. Nearly always looks better than homebrew.
5. Nearly always works better than homebrew, unless maybe you have some engineering and/or manufacturing background.

There are probably more reasons I could come up with. Don't get me wrong - I have homebrewed everything from a complete 40 meter mobile SSB rig of my own design to an 8877 legal limit amplifier, also my own design. And they worked fine.

Having homebrewing skills is a good thing, but that doesn't mean you have to homebrew everything.

Why is this an on topic response? The question was information on the
MFJ sound card interface - not how to drive a PTT line from a serial
interface. Besides, VOX works fine for sound card interfaces.

Duffy,

Just got mine in the mail on Saturday, works great. Upon removing it from the box (no manufacturers box just the Priority Mail container) my first impression was "Chinsey" (for those that don't speak southern that's "Cheap"). The housing is a plastic box that folds over, no screws holding it together. There is a stick-on label on the opposite side of the seam indicating model and manufacturer that holds it together. There is no strain relief for the cables which exit from a molded notch in one side of the box.

I would have rather seen a two piece box that screwed together and connectors with custom built cables for each radio, but that would drive the cost up, but it seams I have a good interface that I can put in another box at a later date if needed or desired.

Hope this answers your questions.

73, Tom
W4TEM

Let's not lose perspective: what we're talking about
here is a piece of wire with a couple of connectors on
it.

I think the problem is this -

Connect a PC to a TNC to a radio, and you have two single-cable connections, and it's quite difficult to make it look untidy.

Connect a "sound card modem" to a radio, and you have one three-cable connection, with presets and isolation transformers in the middle, and it's quite difficult to make it look tidy!

So the target is not to make the connections - that's easy enough - but to make them in an exceptionally neat and tidy manner.

Whenever I set up a sound card modem to test software (that's about the only time I ever use one), I use a couple of presets on a breadboard, with phono plugs hanging off it on flying leads, and connecting cables running to my PC, which is 10 feet or so away from the breadboard / rig. The end result always reminds me about a comment my mother made about some of my father's experiments - "Wireless? I've never seen so many wires in all my life!"

Yes there already a program that does PSK31 using the TI DSK c26 board. Look
about on this page http://det.bi.ehu.es/~jtpjatae/ham.html I think either
you will find the program or a link to it.

Nothing to be amazed about there. It might be that not many if any of the Hams here have tried or seen the unit you asked about. ALL of the responses have been "on-topic" though, whether you personally found them to be satisfactory or not. Your question initiated a discussion... I hope that is not too shocking to you.

From the photos I've found on the net, the IC22U appears to have more in common with the IC24 series than it's predecessors in the IC22 series. It uses three decimal switches to set frequency, so it's not limited to the same frequency range as the 22S.

When I get a chance I'll open it up to see if there are any connections to the ACC jack.

Gerry

That seems likely. I suppose if that's the case, one could buy/build a remote control head for the radio. Not as sophisticated as today's units, but not a bad idea.

Thanks.

On my Kachina, I just used a Transformer on the Transmit audio. The transformer is at the computer, and I used balanced shielded audio line to the radio.   This shield is grounded   I also used a relay, and the "amplifier control line" so that by using the Kachina controls for Amp on and Amp off, I dissconnect the balanced transmit audio from the Kachina when not running digital modes. This is intended to keep me from transmiting unintended computer audio.

I used to know the model number of it, but forgot. Seems like maybe
EX-???? or something like that. It had the same exact rotary
thumbwheels/pushbuttons as the radio, but on a remote plastic case that
ran on a cord to the rig. The 22U is actually a good radio if it's still
working right. It has 5 helical resonators inside and has a tight
receiver, with low intermod numbers. For it's time, it was very good.
Just not fancy. And it can be modded for MARS coverage also, but it's a
PIA cuz you have to switch manually between transmit and receive. MK

Hi there fellow warblers... MixW version 2.0 RC10 has now been uploaded to our website which is: http://www.nvbb.net/~jaffejim/mixwpage.htm the following changes and updates have been made:
- Expiration date (for unregistered users) is September 1st 2001 Now Supporting Dual Callsigns
For Registered Users (Must be at same address or MARS Callsign)
Added:
Tip of the Day window is added.
Please suggest new tips!
(You may also edit tips.txt file from MixW directory.)

See ExtProg.html to learn about interfacing MixW with other programs (short VB samples are included):

- Printing QSL cards;
- Passing QSO data to external loggers;
- Passing data to external maps;
- Switching/rotating antennas;
- Custom callbooks.

Contesting for Monkeys article tells about an example of using MixW in contests. See MonkeyOp.html.

New fields are added to the log file:

- Domain (state, etc.),
- IOTA,
- county,
- QSL manager.

Callbook fields can be viewed via DDE when Callbook dialog is open.
See MixW DDE test.doc file from MixW directory for details.

Two user-configured Log bar layouts are added.
See Configure > Log bar > Custom 1 & 2 menus. Resize Log bar columns by their gray headers. Double-click on the border of a header to restore it's original size.

Contest mode: separate menu (View > Contest mode > Activate contest mode) is added to turn on/off contest mode.
- Domains, states, etc. (see Contest settings dialog) are now grabbed to Domain field or SerialNR (see "as Domain" and "as Number" switches);
- Contest time is now grabbed to Exchange Received field and added to the exchange number, like '001 1532' (001 is a number, 1532 is grabbed time).

In Search Results dialog, click Callbook button to open the Callbook dialog for a selected callsign.

Export to Cabrillo format file:
2 formats are now supported:
- rst + number,
- [number] + name + domain (NAQP contest etc.).

Export to text files:
New log fields are also added to export list. Using a text editor, exported TXT file can be converted and sent as a contest log.

Icom transceivers:
CWR, FSK and FSKR support added;

Configurable output amplitude for each mode. See Mode > Output amplitude for this mode menu.

Best 73 Jim, WA2VOS

You seem to know more than anyone else I've talked to about it, so here's another
question for you: :-)

There are two switches in the upper right. One is simplex/duplex+/duplex-. The
other
one (from memory) is labelled dup1/dup2. Do you know what it does?

Gerry

We are pleased to announce that version 1.0.15 of Log Analyser for Windows is now available from http://www.acarsonline.co.uk

This release offers a number of enhancements:

Lowe Airmaster 3/2000 support

Added a new Statistics page

Added "Heard Aircraft" management so you can now see how many aircraft of a particular fleet you have heard

Aircraft Database can now be updated by Importing the CSV file available from ACARS Link (http://www.acarslink.com/alaceqip.htm)

List of New Aircraft displayed after importing a log file

Improved Text output

This is a FREE upgrade.

Thanks,

Mark Avey

It's been so long, I'm not sure without seeing a picture, but it may be
to reverse the split if I remember right. Say you are on 146.88 with the
top button on - duplex. It seems the other one may have reversed the
split for a quick way to listen to the input. You would then be
receiving on 146.28 and transmitting on 88. But I may be wrong on this.
Been 15 years or more. I can probably dig up an old ad in a QST. That
might prod my memory better. MK

I just bought a JPS NIR-10 and am trying to find a source for the EEproms, I think thats what they are as apposed to Eproms.

The are a WIS 57C191C or B I dodn't know what the difference is.
The chips are marked 57C191C-35 but George at JPS said B.

George (K8QM) at JPS was a great help in providing the latest code, since they do not support this item anymore. I hate to bother him again, since they really don't handle this any more.

All I have to do now is find the chips and a burner.
I guess an EEprom take a diferent burner ??

```
Thanks, Bob

Besides, it is actually possible (and not difficult) to build your own.
It is only a handful of parts (transformers, optoisolator, a pot, maybe
some resistors).

> 10 years. Interfacing to the speaker jack and the mike connector may
> be easier to accomplish but it is much less convient operationally
> once it is done and you have to be more careful not to overdrive

Doesn't every radio made in the past 15 years have accessory sockets?
I would never consider connecting the PC to the speaker/mic connections.
It's just too inconvenient when you want to operate another mode.

Besides, you need to be listening with your ears to operate digital
modes too. For one thing you need to listen for a clear frequency
before transmitting.

Hamish

There is a program called Cluster Master v4.50 by I0jx that does what you
want.
You can contact Tony at i0jx@amsat.org for the shareware program.

I would think there are several.

My WinPack software will do it, even though it's not specifically a DX cluster program.

Hi Mike,

Check out EBAY.  There are always lots of TNC's on auction.  I prefer the
KANTRONICS line of TNC's with their built in APRS digipeater firmware.  Make
sure the TNC has the latest firmware

If you just want a TNC to send out your position for APRS, check out
TinyTrak at http://www.byonics.com/.  It is all you need for mobile APRS and
it cost around $30 US (but you must build it!)

But if you want to also receive APRS signals and display them on a map on
your PC at home, you will need a regular TNC like the KPC3, etc

73's
Rob

Hello Rob

Thanks for the info but i will not use ebay...
i don't need arps ability at this time... just looking
for a old Kantronics KPC II or th KPC III ( Not the Plus )
for basic packet Use

They seem to have released a new version of Skysweeper (2.4) including at least following things:

-Chat application for RX and TX coversation
-New multitone SkyBoost mode
-Mixer

That Skyboost seems to be free (doesn't require registration). Has anybody tried it yet?
You can find Skysweeper here: www.skysweep.com

Hello to all,

I have a problem with one of my PK-900's. After it runs a few minutes it will not connect to another station on VHF packet. It transmits and the remote station responds, but I do not get a connect. You can do a reset and it will work OK for a few minutes then the problem returns. I can still monitor other packets after the problem starts.

I started swapping some parts from my good PK-900 (mem, EPROMS, etc) and found the problem went away after swapping the EPROMS. Both units have the same EPROM revisions. I made a copy of the good EPROMS with my EPROM burner and they will not work at all. Thing will not even boot. BTW I know it isn't legal to make copies but, I do not think I am stealing anything, I was just trying to restore what was lost/corrupted.

Are these things somehow copy protected? I have used my burner to make copies before with no problem.

Anybody have any ideas. Since AEA is gone and I heard that Timewave only sells upgrades to DSP.!!

Hi, all!

Just got a new computer and am reconfiguring the shack from top to bottom. Have several radios (756pro, 895xlt scanner, rx-320, 706mkII) that I am setting up for varying levels of computer control. The

computer that I'm setting up has an AMD 1ghz chipset w/ 256megs, etc.
It has an ONBOARD "soundcard" (part of the motherboard) I want to
also install a soundblaster 16bit card and use BOTH...I'd like to
dedicate one card to my RX-320, for example, and use the other for
digital modes.
In fact, I installed the card and drivers for the SB card and now the
computer recognizes only that card. Hmmmm.....Any suggestions? I
imagine this topic has come up before, but I'd appreciate any advice..
Thanks in advance!!

I've never tried any of their stuff yet but I think

<http://www.elcom.gr/sv2agw/agwsc.htm>

has - or has a link to some SW that does just that. Check out the link
at the very top of the page to "good info..." too.

Seems to work OK under Linux... I've 2 "es1371" based cards in
my system and am able to run AX25, PSK31, and normal sound apps.

Under 98, however, similar experience. The last card installed
in the system is the one that works, while the 1st. is dead.

It is possible to have more than one soundcard, as long als your operating
system and the application program support that.

You need to set up two Hardware Profiles, one for each sound card. See
your Help File under "Hardware Profiles," and keep us posted. (I'm
assuming Windows.) I change things so often, I never know when I might end
up with a motherboard with integrated sound.

That won't work, you can only select one profile at bootup so only one
card will be active.

Thanks, everyone......I'll try each suggestion and post my results. I
also just
picked up Mandrake's Linux for Windows as I'm interested in learning
to use Linux/Unix. I've heard that Linux is quite accomodating as far
as hardware integration is concerned--we'll see. Of course, I wonder
if, while using Linux I'd still be able to use Window's based Digipan
or MMSSTV? Probably not, eh? I'll let you know what happens here w/
the soundcard conundrum!

I did figure what was going on...forgot to set the HF/VHF switch on the back to VHF!

Otherwise it works fine, although tweaking the transmit level may be in order...

Siting anti-spam as the reason for this, Eudora and any other non-Microsoft mail client will no longer be supported, or allowed access, as Microsoft will discontinue port 25 POP/SMTP access.
>
> Looks to me like another "squash the competition" 600 pound gorilla action by Microsoft. Just like the did they browser competitors.

Don't have a clue, do you? Have you compared the performance and features of "Hotmail", as compared to pop3 E-mail?

Microsoft will suffer, not "take over the world" as a result of their decision to save bux on all those pop3 servers.

Another bit of Microsoft paranoia deflated. (It's easy to deflate opinoins based on ignorance and prejudice.)

>
> To paraphrase Ken Star, who TechTV interviewed, it was business as usual at Microsoft. Do anything they have to and can do to make all computer users need and rely on Microsoft products. He continued stating that this is another reason to contiue the anti-trust action.

You can personally thank Bill Gates for the very existence of Linux, Bozoid.

If not for Microsoft, we would still be using 386's, and having to buy and install numerous third-party software, just to come up with a decent software suite. To get the equivilent of what MS bundles up with Windows today, you would end up spending over five times as much.

Most rational people have no trouble seeing where a savings of 500% or more is in their best interests.

Communinistic morons such as yourself just can't stand it when somebody accomplishes something beyond the narrow limits of your personal prejudices, especially if they make money by doing so.

News Flash: Many countries, including the former Soviet Socialist Republic, have twigged onto the fact that socialism just plain doesn't work. Your fit-throwing over the activities of a sucessful capitalist just make you look stupid, petty and small-minded.

Charles, N5PVL

What exactly are those performance and features that make Hotmail so
mush better than POP3. My kids use Hotmail and the only real differenece
is Hotmail has advertisements, which is ofcourse what pays for it. If
you are asking others to compare features/performance, please at least
cite those that you consider inportant.

If you really knew anything about POP3 you would also know that POP3 is
a "PROTOCOL". It is a standard method for a client app to retreive Email
from an Email/POP3 server. How the mail is presented and organized, how
it replys, CC's, forwards, organizes addresses, etc are performed by the
cient app used by the user. POP3 has nothing to do with that, just a
standard method of getting it from the mail server to the client.

```

Nope, you display the ignorance by comparing pop3 and an Email http
server, i.e. Hotmail, They are two different things.

No, you can thank Andrew Taunban(sp?), a Dutch professor who created the
Minix OS, a multitasking stripped down Unix like OS that he wrote to
accompany his execellent OS text book to give students source code to
look at, modify and improve as part of their studies. Then Linus
Trovlads used that as a base for his Master's project to extend its
capabilities. He made comments about what he was doing on a couple of
Internet newsgroups, several others made suggestions and also started
hacking it, with Linus being the coordinator, and the rest, as they say,
is history.
I gues you can actually thank the Internet for Linux's exsistance.

>
> If not for Microsoft, we would still be using 386's, and having to buy and
Also locked into all of the segmented memory models, virtual 8088
headaches and so much that caused all of the development/stability
headaches. Not to mention all of the bandaids to overcome DOS's problems
through Windows 3.1, and really slightly beyond.
Look at how many processors Linux has been ported to. If you develop an
app in C or any non-scripting (perl, etc), non byte-code (java) for
Windows,, how many platforms will it work on? Linux, along with X,
breaks that barrier. I have written apps, including ham apps, in C code
that with nly tweaking the serial port openning have run on Sun and
MacIntosh systems.
It is also said that IBM was going to use the Motorola 68000 in the PC,
A much better chip than the 8088 line at that time, had 32 bit linear
addressing and an external MMU, but Gates talked them out of it because
all his prodcts were based on the Intel line. Very smart move on his
part.
> install numerous third-party software, just to come up with a decent
> software suite. To get the equivilent of what MS bundles up with Windows
> today, you would end up spending over five times as much.

The only thing that Microsoft bundles with Windows is Explorer, and
maybe Outlook. Whatever else is included with a new system is done by
the computer supplier. Some include Word or the entire Office suite,
while some include Works.
Plus, now they are on "ghost" recovery disks. Not installable disks. So,
it is attached to that system only. If it tears up or is
stolen/destroyed, you cannot buy another system that does not include
what you had, or put a system together piece-by-piece and install the

shipped package. So you do not really OWN a copy of it. It is considered part of the original system

>
> Most rational people have no trouble seeing where a savings of 500% or more is in their best interests.
>

Please cite your source for the 500% savings. I can not tell you how much lost time I have re-installing Windows, having the "blue screen of death" appear appear while installing a new software, etc.

All I know is it seems I see in pubs where a number of companies/organizations, Amazon for one, are going to Linux, citing the cost SAVINGS.

> Communinistic morons such as yourself just can't stand it when somebody accomplishes something beyond the narrow limits of your personal prejudices, especially if they make money by doing so.

No, I applaude Bill Gates, he is a buisness/marketing genuis to take a non-stellar product to the penetration it has.
What I am againest is the methods of keeping that market. By way of the 600 lb. gorilla tactics.
Gates once said a number of years ago "that the Internet would never amount to much." Well, he was wrong and Microsoft got caught with their pants down. Netscape went hog wild. Microsoft's answer, Explorer, which they bundled with Windows, i.e. free and already there. They claimed that the integration of browser to OS WAS the next big evolutionary step as the justification. Not that they were trying to drive Netscape out. If that is true, then why did they just announce that the next release, Windows XP, will allow you to easily remove Explorer and replace it with another brand? Duh, who else is there in the Windows browser world that is really usable/known by the ordinary user? Netscape is a shadow of it's former self. Microsoft wins, they no longer have competetion in the browser arena. But, I thought it was supposed to be the next step, Explorer integrated so deeply in to the OS that it HAD to be there.

>
> News Flash: Many countries, including the former Soviet Socialist Republic, have twigged onto the fact that socialism just plain doesn't work. Your fit-throwing over the activities of a sucessful capitalist just make you look stupid, petty and small-minded.

If that were true in the buisness arena, then why do anti-trust/monopoly laws exist. Why do mergers of mega coorprations have to attend government hearings to assure that they will not have a monopoly after the merger.

Right now Micrsoft is trying to be the old USSR style communism, we are the ONLY choice, and we will do what ever it takes to BE the only choice.
And they certainly don't intend to acheive that position through superior products.

>
> Charles, N5PVL

Charles, once again you have neglected to state your computer professional background experience as I have asked before. I really want to know since you keep quoting "what computer professionals think of Linux."

Also, why do you feel the need to rely on name calling and the such? Do you feel you are inadequate to express your views through civilized dialog?

I'm trying to find a DX Cluster I can connect to out here in the desert of Southern CA. I've listened on all the usual frequencies and so far have only heard one node - W6KK-8. I was able to connect easily, but the command set is not one I'm familiar with. I am familiar with AK1A's software and also CLX, but this one is different and the on-air help isn't much help. It says it is running a Z-80 machine with TheNet software. I found the TheNet website and downloaded what documentation they had, but it's mostly for sysops, not users.

Apparently after connecting to W6KK-8 you then have to connect to
a different node for DX spots. Correct? I can get a list of
various sub-nodes (?) including one that says it is a DX node,
but trying to connect to them gets me nowhere. I must not have
the commands right.

Any info or advice will be most appreciated.

73, Bill W7TI

My point (made obvious by the next paragraph in that post) is that "hotmail" does not compare to pop3. It sux!

Can you really imagine handling 50-100 messages a day with "Hotmail"? You'd be at it all day! I get pretty good dial-up speed here (4800-5200) and still do not waste my time on "Hotmail". My wife is one of those "technical support" weenies for MSN, so she gets it for free. I used it for a while, then decided I didn't like "Hotmail" and MSN's infantile browser, so I found a local ISP that offers pop3 and usenet, which MSN no longer supports. Sometimes we use the MSN dialup, if my ISP is having a hiccup, but that's about it. My wife uses MSN, so she can find problems and develop "fixes" for them, as part of her job. For her, the MSN account is a research tool. She uses my pop3 account for her personal E-mail though, and accesses newsgroups through my ISP, since MSN no longer offers those services.

If she paid for her MSN account, it would cost her over twenty bux a month. I pay half that, and get a lot more features and a lot less advertisements and junk mail from my local ISP.

DSL is available at my place. (I live between the library and the post-office, downtown) We are thinking about trying it out. I bet I don't use "Hotmail", even under those conditions. Less features, more delay.

I think people only use AOL or MSN because they don't know any better. On the other hand, MS has added an ability to use Outlook Express with http-based E-mail, which does help out a bit. In the long run, this may make http-based E-mail more practical and usable. Not having to have pop3 servers at thousands of MSN providers will save a bundle of cash for MSN, no doubt. It's all about making a buck, and keeping the overhead to manageable levels.

I think the real problem lies in your difficulty in reading and
understanding plain English. I'm not one to write to "the lowest common
denominator", so I guess you will have to make an extra effort to keep up to
speed. Do you spend a lot of time around a university, by any chance? That
would go far in explaining your abilities and attitudes.

QEMM, NetScape, Eudora, Stacker, Central Point antivirus, and several others. - All used to be third-party stuff you paid extra for. These are just a few of the products "gobbled up" by Microsoft either through buyout or the development of MS software to do the same thing, at various times. If you remember, word processors like "WordPad" (ANY word processor!) used to be expensive add-ons. Add 'em up. You don't need to buy any of these, anymore. - And that represents a significant savings over having to buy each

item individually, in order to build up a good software suite as we used to
do in the late-386, early-486 days.

That may or may not be their intention, but that is how it turned out.

I have no professional (by my definition) computer programming experience whatsoever. By your definition (getting paid) I am a professional.

I am a systhesist. Calling me a "programmer" is like calling a artist who uses glue to assemble his art a "glue-er".

I do know a number of programmers who fit my definition of "professional", though, and am well aware of their preferences and attitudes. They do not match up with yours, which are pretty liberal. The fact that your criteria lands me in the "professional" category does not speak well of my ability, instead it speaks of your amazingly low standards. - You've been hanging around the university too long.

> Also, why do you feel the need to rely on name calling and the such? Do

Not at all. I am merely being descriptive. If you struck me as being outstandingly clever, I'd be quick to mention that, too! - But you don't.

Charles, N5PVL

That's the whole point, Jeff. MSN will no longer support POP3. OE delivers
hotmail http email; very few or no other email clients do. (I'm wondering
what you're arguing about on this one. The remainder of your comments seem
to be anti-Microsoft.)

> Nope, you display the ignorance by comparing pop3 and an Email http

> ...

The proximal cause for Linux might be torvald's academic work. The root cause would be traceable to man's need to build. The real reason is probably more related to Charles's comment regarding Bill's direct and indirect influence on all things Intel and PC. I suspect highly that DeskView's unsuccessful bid for a slice of the PC desktop market is most directly related. And for their dismal showing, you can thank Bill's gang for their remarkable marketing acumen.

> It is also said that IBM was going to use the Motorola 68000 in the PC,
...

I'm pretty sure they canvassed the entire chip spectrum, including Motorola's offerings.

> I can not tell you how

Have you ever built a kernel?

> All I know is it seems I see in pubs where a number of

I doubt they're talking about OS purchase costs, so you might have to elaborate on where they say their savings are.

...
> They claimed
> that the integration of browser to OS WAS the next big evolutionary step
> as the justification. Not that they were trying to drive Netscape out.

That argument just stinks. GUI desktops, file browsers, TCP stacks, game interfaces, text-to-speech, speech recognition, disk compression, etc., are not rightly part of operating systems. Why focus on just the browser? How many competing browsers do we need for a healthy market? Mere inclusion of a feature doesn't seem to violate anyone's sense of fair play; witness the abbreviated list above. Netscape's problem seems to be that Microsoft gave away a *successful* product. I'm still at a loss to understand how it hurt me to not have to pay Microsoft to use it.

> Charles, once again you have neglected to state your computer

> Linux."

I won't speak for Charles, but where I'm concerned, Linux is a toy system. You can use it to do useful work, both as a personal desktop and as a server. But even there, its performance ranges from merely adequate down to struggling. Doing even this much is a large accomplishment, and all who contributed are rightfully lauded. However, the achievement is in simply showing that it doesn't take a multi-billion dollar business to turn out an operating system. It pales in comparison to what all of us see and use daily. The best that can be said is that Linux shows potential, that it achieves what was state of the art as recently as three years ago. I can come up several reasons why you might choose Linux as a platform for a business critical application, but they can all be summarized into one of: it is "best of breed"; as a political statement; due to limited resources; or "we don't know any better". The first -- being the best of all available choices -- is the only valid reason, and I'm coming up blank in the list of domains where that might be true for Linux.

Mike.

>the commands right.

The connect command is C
So: C call

Where call is the callsign of the node you see in the table.

When this does not work, don't panic. NET/ROM networks usually don't work.

Rob

Noted that Howard does not like the direction the discussion appears to be going, just like Steve.

;-)

Both are TAPR dweebs. Apparently the discussion somehow drifted astray of the TAPR "party line", a sure sign that there is a good deal of merit in what has most recently been said here.

Charles, N5PVL

I think you're putting more faith in TAPR than anyone else in the amateur radio packet community ever did.

TAPR wasn't really anything more than just a REGIONAL group. Yes - they produced some hardware. Yes - they proposed many things that some in other areas heard about. However, they were never "national" in scope. There are many regional groups.

I haven't been a member of TAPR since Dewayne Hendricks
took over the company and merged it with Dandin. I don't
even know if they exist anymore.

But Chuckles knows this, and his only reason of bringing that
organizations name into the thread, is because of the day he ran
out of the Dallas Hamfest when the TAPR president asked him
to stand up and debate him with his views. His tail was so
far up his butt that everyone in the Southwest knows him for the
windbag that he is. A CB'er with a Ham ticket. This is the only
way he can get back at the 100's of Hams who laughed as he ran.

I know the HamCom you are thinking of, and no, Greg did not ask me to speak at that 'fest. If he had, I would have refused to do so.

The meeting you refer to was supposed to be a BBS SYSOP meeting, but there were maybe four actual BBS SYSOPs there. The other ten or fifteen attendees were Greg's pet LandLine Lids. You infer that you were there. Wanna make a stab at telling us which group you were in?

I was asked to speak there, by a BBS SYSOP I did not know, not by Greg Jones. The SYSOP told me that he thought Greg was full of crap, and asked me to attend. When I got there, that same "BBS SYSOP" stood up front and recited the "TAPR LandLine Lid party line", word for word, while nervously glancing back and forth between Greg and Harry to make sure he had gotten the "patry line" right. It was pretty pathetic.

Prior to this, Greg had refused to debate those same issues repeatedly on the TAPR "BBSSIG", going so far as to boot both myself and Hank Oredson W0RLI off of the reflector simply because he did not agree with what we had to say. (We kept insisting that "Amateur Telephone" had no place in Amateur RADIO, and Greg couldn't handle that.) Greg made avoiding debate with me a career, because he never came out looking too clever whenever he did so. That was because Greg was a moron who couldn't complete a paragraph without forgetting what he was trying to say. I'm sure he still is an idiot, to this day.

As Greg's pet "trained seal" went through his act, I saw the other real BBS SYSOPs getting disgusted. I was not the first, or last SYSOP to simply get up and leave the room, rather than sit and watch the "trained seal" embarass himself and all other SYSOPs as he continued his act.

Greg only feels secure when surrounded by ass-kissers and idiots such as yourself, hence the high ratio of assholes to actual BBS SYSOPs at the meeting.

On the way out, Paul Guido ran out to beg me to stick around. I just grunted and turned away, while my wife gently reminded him that the name of the hobby is "Amateur RADIO", not "Amateur telephone".

Later, every prediction I made about the stupidity of Greg's policies proved to be true, and his ideas were proven to be a load of ignorant crap. His predictions never came about, mine did.

>His tail was so
> far up his butt that everyone in the Southwest knows him for the

Nobody was laughing. Some embarassed begging from Paul went on, but that was all. The "BBS SYSOP" meeting went on, I suppose, with possibly two remaining SYSOPs, and Greg's cadre of ass-kissers and morons, a group I had no desire to be associated with. If you were there, you were part of that group, and you remain an ass-kissing moron to this day. No big surprise there.

Charles, N5PVL

The policies that you and other ass-kissing morons at TAPR put forward undermined and eventually almost killed packet radio in the US, while European Hams (With no TAPR) continued to advance and grow during that same period of time. Now the US packet net is dead, and the European packet net is at least ten years in advance of anything ever designed and built in the US. I bet you TAPR dweebs are real proud of your "accomplishment".

I do not "bash" homebrewers, just ignorant idiots who have taken on Linux as a new religion and go around lying about how Linux apps are so much better than professionally written stuff. I don't have much use for bald-faced liars... Or idiots. Sometimes innocent people mistakenly believe them, and then suffer for it.

By pointing out those lies, I do a great service to Hams everywhere. Sorry you can't handle that, but I can't say I'm surprised by that fact. Maybe you have trouble seeing past your nose because Greg's butt keeps getting in the way.

Charles, N5PVL

>snip<

In response to your post about that particular Ham fest I too was there and did not see him run out, scared or otherwise, but what I did see was several sysops, Charles not the first, leave. It was incorrectly announced that this would be a meeting for BBS sysops, not amatuer telephone. I have always been an advocate for ham radio, using radios....duh!

Either you were not there and are blindly parroting what you heard, or god forbid you were there but not very observant. As a fellow ham I think we should encourage the use and expansion of radios rather than telephones for hams. I love the internet as much as the next person, but I am pretty sure the next time a storm knocks out the electricty or something worse I would not be able to use the internet for ham communciations. I find this whole trend disturbing as somehow maybe you folks lost the original concept of Ham Radio....using radios.

I just don't see what TAPR has to do with GCC or Linux. I don't
understand why they were brought into the thread.

Definently not.  I have not heard of TPRS.

If the amateurs in your area put any stake in what TAPR had to say about
anything, then I really feel sorry for you.  Here in Southern California, the
SCDCC (now defunct) never really cared for what TAPR had to say.

Said TAPR president seems unable to debate ANYTHING
with anyone who might possibly disagree with his viewpoint,
leaving very little possibility for "debate".

Check out the BBS sysops forum if you think the above it not true.

Anyone with the temerity to disagree with the "Land Line Lid"
party line is summarily booted off.

when working psk-31 I notice that several hams reference their locater
number.....    I assume this is a grid system.....   Is there a place on the
internet where one can get this information....    maybe print out a map?

I am contemplating getting PSK31 going and need some advice
from someone who has been down this road.

I have an 1 month old Dell Inspiron Laptop. Plenty of CPU and RAM but not
sure about the soundcard.

Looking at all the Interface Diagrams on the web, and commercially available
equipment, I only see interfaces to the line in and out on the PC.

This Dell has only headphones out, and mic in. Can I run PSK through these
i/o's ? Do I need to make any changes. Is there any commercial interface that
supports these connections.

My radio is an FT1000MP-V.

I prefer a laptop in the shack for space reasons (its a bedroom according to
the XYL !), and had big problems with RFI from a desktop.

Thanks in advance.

I would check out the AARL web site www.aarl.com   I am going to suspect
they are using the same grid that is used in field day operations.

This is the Maidenhead locator system. It is a system that devides the earth into what might also be called Grid Squares. It is a system of leters and numbers that use the latitude and londitude to indicate where you are. Most of the time you will have 2 leters and 2 numbers. Such as my location in the middle of North Carolina is EM95. This breaks down as the first 2 leters devide the earth into 20 by 10 deg areas. The 95 then devides this area into 2 by 1 deg areas. Two small leters can be used after this to give 5 by 2.5 minuits of area.

I am sure if you do a search you can find a program for this. One that I have used is 'Great Circle Maps'. I think some of the logger type programs have this in it and while it You can look in www.qrz.com and find your grid locator by looking up your call . I am not sure if it is exect as they may use the zip code to find the town you live in so it will just be close.

It's the IARU locator system. Used in IARU Region 1 since 1985, but I think you folks across the pond only started using it a good few years later. It was originally called the Maidenhead locator system, after the town in the UK where the meeting was held at which the system was originally adopted.

There are lots of explanations on the web as to how the system works, but you could try http://www.qsl.net/ei7gl/locsqr.htm

Download one of the free programs and try it. The headphones out should put out plenty of voltage to drive the mic input or maybe whatever other input for the transmitter you have. The mic in of the PC will probably work also. You may have to pad the input to the PC if you want to increase the volume on the receiver so that you can hear it in the rigs speaker.

I have used my laptop for psk31, I do it every time we go camping with our travel trailer. I also used it for field day. I was lazy and purchased a Rigblaster interface.
Have fun and remember to try all the bands not just 20 meters!

True, that is part of the rule (smile).

Guess we just have to wait a few more days for the thread
drift to get there by itself.

I am thinking of getting on PSK31. Will a standard IC741 / 2N2222 /
1N4148 using 9 pin serial to key and PTT interface work, or do I need
something else ?

Thanks

Anyone using the 'Lil Rascal digital interfaces? I would like to know your opinion as to the quality of construction. For $49 shipped to anywhere in the US, it looks like a pretty good deal.

Thanks,

Duffy - WB8NUT

Hi everyone,

I am looking for this IC TCM3105 for our student's project. Can someone help me to locate where I can purchase two pieces for this project. I know that this chip is out of production by now. But I am sure someone may have two pieces around. Please help me.
My e-mail address: pkchin@pd.jaring.my.   Thank you.

P.K.Chin,
9M2CW

My PC is causing too much interefence to my HF RX to allow reception of any digital data methods.   I think alot of the interference is coming from the monitor. Can anyone suggest a quick cheap and easy solution ?

You can receive PSK31 using a HAMCOMM interface and INTERCOMM software but you CANNOT generate or transmit PSK31 signals using a HAMCOMM interface.

See http://ourworld.compuserve.com/homepages/pa3byz/rttymade.htm

I am not sure what the psk31 programs use to key the transmitter, but
you can forget the Hamcom nterface and just use the VOX on the
transmitter to do the keying.  YOu surely will not use the hamcom
interface to do the receiving part in any of the jprograms I have seen.
All you usually need to do is send the received audio to the soundcard
and from the soundcard you need a couple of resistors to cut the audio
level down.  Think I uses something like a 100K from the sound card and
1K to ground then into the audio in on the transmitter.

>Can anyone suggest a quick cheap and easy solution ?

There really isn't any cheap solution. I had the same problem which caused me to switch to a laptop. Works great now. The only other suggestion I would have is to try separating the equipment as far as possible (within reason) or try a different monitor.

Hi All,

Has anyone successfully used the KISS mode feature of the built in TNC's of the Kenwood TS-2000 or the THD7AG radios?

I am about to purchase both of these radios and I would like to use them in a KISS mode configuration to allow the host computers connected to them to use host software which requires KISS support.

Kenwood tech-support indicated that the TNC's are pretty basic but they are supposed to support KISS mode. However, in a contradictory statement, they indicated that it does support KISS but does not support binary transfers. A standard KISS mode TNC should support binary data due to the data escaping mechanism in the KISS protocol spec.

Any advice/comments would be hugely appreciated!

Greetings,

Can anyone point me at the WF1B web page please the normal one seems to
be missing. (http://www.wf1b.com/)

Is there a problem with his page??? or has he moved.???

Cheers Kevin G0NUP

The page has been closed down temporarily, but Ray has promised
to open up another one soon. As you may know, Ray has gotten out
of the software business except for (paid) support help. You
might want to subscribe to the RTTY reflector:

Most of the RFI/TVI emanating from computer systems into the HF bands comes
from the high voltage monitor electronics and sweep circuitry. Laptops are
the *only* way to go in radio shacks. No EMI from high voltage monitor
sweep circuits. --Peter K1PO

>Any advice/comments would be hugely appreciated!

I don't own one of these devices, but I do know that Kenwood tech people
are well known for their ignorance about packet radio and the terminology.

So I would not be surprised if they wrote things like that.

There is (was? was this ever fixed?) a bug in the TNC firmware in that the
persistence parameter is misinterpreted. Setting it to 255 means to never
key the transmitter, instead of always keying it immediately.
This causes malfunction in combination with software that tries to do the
channel access on the PC (e.g. DAMA) and tries to help the user by setting
the parameters to "correct" values...

Don't forget the "other" serious bug in the D7/D700 TNC; it simply does not send acks to I-frames without the Poll bit set. Since the Poll bit is normally only set as a result of a retry, this means that a D7/D700 connected to anything other than another D/D700 will give very poor performance, such as when connected to a BBS.

The D7/D700 also *always* sets the Poll bit on I-frames; this means that one D7/D700 connected to another will give reasonable throughput but this comes at the expense of channel loading. Further, this bug forces non-D7/D700 TNCs to respond to every I-frame with an ack, which reduces channel efficiency.

I wrote Kenwood a letter about this, and included a packet trace with notes, and have heard nothing but deafening silence from them. I guess that's what I get for the $700 that I spent for a TM-D700A.

My suspicion is that Kenwood/Tasco focused their development and testing effort on the APRS capability of the TNC, which does not use connected-mode AX.25.

There is a simple program available called "Invert"
it will do this for you using you computer and soundcard
just conect you scanner to your soundcard via a shielded audio cable
you can adjust the inverted freq to 1700Hz or to what ever you like

Excellent. Have you seen it handle 8-bit binary data using KISS mode?

The KISS protocol itself should handle the data transparency by escaping any binary char's that match KISS framing char's. And the serial interface is 8N1, which it has to be because the KISS framing chars (0xC0, 0xDB, 0xDC, 0xDD) all have bit 7 on.

However, someone in a prior posting thought that they did not support 8 bit transfer in KISS mode.   The dealer I am trying to purchase these radios from is currently trying it but he indicated that its not working. I am thinking it would most likely be a configuration error and not lack of support of 8 bit KISS transfers. However, before I invest all this money, I am hoping someone has tried this already.   Basically if anyone can confirm that they did a file transfer or sent an image using KISS or even used TCP/IP in KISS mode using these two specific radios.

Please let me know.

Best Regards!

I don't know about the TS-2000, but KISS does work on the latest version
of the TH-D7. It didn't work on the original version. There is a
limitation in that the radio only has a very small buffer size. If you
look in the TH-D7 group on YahooGroups, you'll find some notes about it

from PE1DNN. He also sent the information on the packet network last
month.

Was there any limitations with respect 8bit binary transfers in KISS mode
using the TH-D7?   Kenwood support is telling me that don't support
transparent mode and hence no binary transfers. I don't believe them since
the KISS framing characters are 8bits.   Unless their KISS firmware is doing
something strange like stripping the high order bit on all the data with in

the KISS frame.

So, have you see/heard anyone not able to send binary data via KISS mode?
Any input would be hugely appreciated!

Thanks in advance!

Transparent mode and KISS mode are entirely different things.

The TH-D7 can't support transparent mode, because it only has XON/XOFF
handshaking. That doesn't mean it can't support KISS mode, because in
KISS mode you don't need any handshaking.

The SW6x100 is a high performance, low cost daughterboard designed to
work with any of the Texas Instruments 6x DSP Development Kits. It provides
the components needed for rapidly prototyping a wide range of RF/IF
applications.   The daughterboard plugs in to any of the Texas Instruments
6x DSKs and provides a wideband analog interface for RF/IF product

development. The SW6x100 comes with software drivers, example source code written in C, and an example project that uses the DSP/BIOS real time operating system to help you jumpstart your project.

Developers working with software defined radios may be interested:

That would have to be a very strange form of stripping, or else the callsigns in the header, many control bytes, and the commonly used PID of 0xF0 would not survive the transmission either!

My GHz computer has more processing power than any TNC I've seen. Does someone make software that can do everything a TNC can do? If so, who? I'm ready to buy.

John

There is some amazing software available that all but replaces a TNC.

Some places to check out:

http://www.qsl.net/wd4ngb/telnet.htm for Telnet (uses the internet to
replace VHF DX Packet Cluster

http://iz8bly.sysonline.it/ for several new digital modes such as
MFSK16

http://www.geocities.com/mmhamsoft/ for MMTTY, an excellent freeware
program for RTTY

http://bipt106.bi.ehu.es/psk31.html for PSK31, several programs
available (my favorite is DigiPan)

http://www.qsl.net/wm2u/interface.html for interfacing your rig and
computer

That should get you started. Have fun!

No need to buy... Check out http://www.afthd.tu-darmstadt.de/~flexnet

Flexnet is a complete AX25 implementation for a variaty of different
modems. It runs under DOS and Windows (9x/ME/NT/2000). And it is free
for HAMs.

No, Not all things a TNC can do, but most. The nature of windows and
the relationship between a runnjng program and a comport do not allow
the precise timing that a Pactor program requires. For PSK31, RTTY
and all the others it will work fine. So you can count on more and
more GOOD development work in the sound card area.

Should you dump your TNC now, NO. there will be a lot of demand for
them for years to come. Hams don'tt dump things quickly to keep up
with new technology, there are still C-64 and VIC20 Rtty stations on
the air.

Reminds me of that old joke, Who invented copper wire? Two old hams
fighting over a penny))) jk

As a computer programmer, I would rate any version of windows low. MSDOS was better. Why Microsoft, IBM, Oracle, and unix/linux are just know catching up with the features of PICK. Features since the 1960's.

Thank you VERY much for the links.

Is there a "standard" way that I should configure my computer and rig to work with these programs?

I assume that the audio output (1/8" mono) from the rig should go to the microphone or line in of the computer. What is the best/standard way to get audio from the computer into the rig? Also, what technique do all these programs use for keying the rig? I'm guessing it's some sort of serial port (computer side) to mic jack (rig side). Is that right?

I've got an Icom 756 Pro. Is there a cable I can buy from MFJ that will make this process easier? Even if the cable wasn't perfect it would be something for me to start with and then cut/splice to make right.

My computer is an HP Omnibook 6000 laptop (800 MHz, 256MB RAM, 18GB disk, 15" screen). I have both Windows 2000 Pro and RedHat Linux 7.1 installed (with the Maetro3 sound card working with both OSes).

Thanks for all the advice!

John

Oh yeah, Pick. That's still around, isn't it? I'll bet someone
mentions Oasis, too, though I think that morphed into Theos.

Now all we need is someone to mention Forth...

Thats a good point. I get the feeling that Kenwood was thinking how can they support raw binary transfers in a "transparent" mode when the only way they can provide any sort of flow control would be using XON/XOFF since there is only a 3 conductor interface between the radio and the computer (TxD, RxD, and GND).

This does raise a good point.   Since KISS is a clearly delimited protocol. They should always be able to differentiate between KISS frame and software flow control chars (XON/XOFF).   But it sounds like they probably don't even do that.

Therefore, I guess you could get into a situation where the computer sends a KISS frame and the D7AG, since it can only buffer one frame, is stilling waiting for an idle period on the channel, and the D7AG would not be able to tell the host to quench any further KISS frames and the host may send the next subsequent KISS frame and overwrite the existing frame.   That would not be a good thing.

Comments anyone?

Why wouldn't this packet overrun be caught by whichever protocol is being used?

Flow control is never used between a PC and a KISS TNC, or at least it
shouldn't be. That's not how the TH-D7 fails to meet the KISS spec, it
fails to meet it because KISS cannot properly be implemented with such a
tiny buffer size. If you read the KISS spec, you'll find this - note the
last sentence:-

"2. Asynchronous Frame Format

The 'asynchronous packet protocol' spoken between the host and TNC is very simple, since its only function is to delimit frames. Each frame is both preceded and followed by a special FEND (Frame End) character, analogous to an HDLC flag. No CRC or checksum is provided. In addition, no RS-232C handshaking signals are employed."

And a bit farther down - not the first sentence even if you don't read the rest:-

"5. Buffer and Packet Size Limits

One of the things that makes the KISS TNC simple is the deliberate lack of TNC/host flow control. The host computers run higher level protocol (typically TCP, but AX.25 in the connected mode also qualifies) that handles flow control on an end-to-end basis. Ideally, the TNC would always have more buffer memory than the sum of all the flow control windows of all of the logical connections using it at that moment. This would allow for the worst case (i.e., all users sending simultaneously). In practice, however, many (if not most) user connections are idle for long periods of time, so buffer memory may be safely 'overbooked'. When the occasional 'bump' occurs, the TNC must drop the packet gracefully, i.e., ignore it without crashing or losing packets already queued. The higher level protocol is expected to recover by 'backing off' and retransmitting the packet at a later time, just as it does whenever a packet is lost in the network for any other reason. As long as this occurs infrequently, the performance degradation is slight; therefore the TNC should provide as much packet buffering as possible, limited only by available RAM."

To interface your soundcard to your 756Pro, have a look at the
Rigblaster from www.westmountainradio.com. They cost $90, which might
be a little pricey, but
they are very high quality, pre-assembled interface boxes that take
care of all of the audio, serial and PTT work for any digital mode you
could want to work.
Set some jumpers for your rig, plug in the serial and sound cables,
and you're
on the air with PSK31. This is the "easy" way to get on the air. I
ordered mine and had it two days later. Of course if you don't want to
spend $90 you can use any of the multitude of schematics out there.

Haven't seen it, but why not go with the Rigblaster? The overwhelming
consensus is that this is the best interface on the market today. Just
got mine and it lives up to it's reputation.

Hi,

I carry most of the "New" mode softwares on my site, they are updated regularly, and include soundcard software's for Windows, as well as Linux.
PSK, RTTY, SSTV, MFSK, CW or what have you :-).

Also interfaces to isolate all rigs from their PC's soundcard.

Take a look see.

http://www.g3vfp.co.uk
or
http://www.btinternet.com/~g3vfp

Cheers, and enjoy.

Dave.

Neither of those links work right now. The first host isn't found, and
btinternet claims the second page isn't there.

Thanks to everyone for the recommendations. I ordered a RigBlaster Plus from
WestMountainRadio.com today. Hopefully it will be here on Tuesday.

I wish they sold a connector for my Icom 758Pro ACC1 port, but they don't.
I'll have to use the speaker output.

Thanks!

John

I disagree that RigBlaster is the best out there. Yes, it is well built but It is my understanding that it only provides isolation on the line from the sound card to the Rig's mic input.

RigBlaster does not isolate the line from the rig to the sound card mic (or line input). Considering the price, you would think that it would isolate BOTH audio lines.

It looks like the MFJ interface isolates both audio lines! But it is pricey -- just like RigBlaster.

The less expensive interface from Buck Rogers called RASCAL is a lot less

expensive and isolates BOTH audio lines.   (See
http://www.packetradio.com/psk31.htm)

But you can easily build one by splicing an audio isolation transformer and
a resistor into each of the audio cables between the rig and the computer
sound card. Then use some back tape. Provides the SAME level of isolation
as the MFJ interface, etc at a FRACTION of the price! Just use VOX. (But
if you want to use PTT, then build a simple 3 component circuit).

Check out the MUCH less expensive interface from Buck Rogers called
RASCAL -- see http://www.packetradio.com/psk31.htm.

It isolates BOTH audio lines between the computer and rig. I believe that
the over priced RIGBLASTER interface only isolates ONE of the audio lines.

But if you want to pay $90, check out the new sound card interface from MFJ.
It also isolates BOTH audio lines.

Rob

One other thought on interfaces:

I have found with my Kachina 505DSP and Icom IC-756PRO that I get much
better SSB performance by applying transmit audio and taking receive audio
from the rear panel connectors rather than using the mic connectors and
speaker outputs. By omitting use of the analog audio input and output
circuitry, I get a large improvement in frequency response, dynamic range,
```

reduced noise, etc.

This is equally true for PSK31 and the other digital modes. The only interface required to drive most rigs at the rear connectors are simple shielded cables and, perhaps, Radio Shack isolation transformers. I find adequate control with the soundcard level controls to avoid using any external pots, etc.

So, I recommend looking closely at working directly with the TX and RX audio at the rear panel connector and avoiding the complications and distortions, overloading, etc. from using the mic connector, etc.

This stuff is not rocket science - just a couple of cables and some connectors; maybe a transformer or two.

I agree with George. The 756PRO's aux1 connector is the best place to interface the sound card. You also get the benefit of being able to set the front panel AF gain to a comfortable listening level (or off completely) without affecting sound card levels. The Tx level can be set without disturbing the mike gain setting used for voice. Selecting one of the data modes automatically disables the front panel mike connector so you don't have to disconnect the mike when running data modes on the sound card.

I already ordered the RigBlaster for $143 (price including shipping and cables). :-(

This looks better since it uses ACC1 audio (fixed level) instead of speaker out audio. Right?

John

But as you can see, $90 ready-built commercial boxes are preferred over homebrewing a set of cables and transformers, by many of today's hams.

If you ever need a VERY fast dupe checker for logging in a contest or just general logging - this is a fast way to implement it in Excel. Fast and simple!

In column "A" are all the call signs - A1 is where you type the new call to check and from A2 to A15,000 is where the logged calls are located. Returns 0 if not worked and number of times it finds the call if > 0.

=COUNTIF(A2:A15000,A1)

I've acquired an IC-22U. It has a jack on the back marked "ACC". A quick check of the net hasn't turned up any information about it, except I found a photo of the inside of a repeater that uses the 22U and has a cable connected to it.

Anybody know what functions are on the jack? Is it useful for packet?

Thanks.

Gerry kg4nbb

PS: followups that include my email would be appreciated -- I don't get here as often as I used to. TNX.

I don't have a IC 756PRO so I cannot comment. But I would not think that there would be too much difference.   Unfortunately, I do NOT think RigBlaster allows you to adjust the level of the signal from the rig's audio output to the sound card mic or line input jack (unlike MOST sound card interfaces). Using a low level fixed output would be better.

As long as you do not overdrive the mic or line input of the sound card, you should be able to receive the digital modes just great. Check the sound card Mix panel (from Control Panel in Windows) and make sure you are not overdriving the sound card.

I hear that RigBlaster is built well. I suspect that they have a big market share since they were one of the first to be on the market. But I find it pricey. (Must be all their advertising !)

Have fun on the digital modes. Give MFSK and PSKHell a try. They are great modes!

```

The receive audio does not pass through the RigBlaster at all - which is why I would personally never recommend it. There are a number of other ready built and kit form interfaces available that do isolate the receive audio and cost less. When RigBlaster first came out it was the only "ready made" game in town. Things have changed.

I do have a 756PRO and had an IC761, both of which have the ACC1 connector on the back panel. I've had sound cards and several multi-mode controllers interfaced to the ACC1 connector for at least 10 years. Interfacing to the speaker jack and the mike connector may be easier to accomplish but it is much less convient operationally once it is done and you have to be more careful not to overdrive anything. If you make the effort to use ACC1 you'll:
1) be able to adjust the speaker level for what you want to hear without affecting the sound card input level.
2) be able to adjust your mike gain control for what you need on SSB without having to reset it every time you switch between digital and voice.
3) not have to worry about switching mike and ptt lines - the 756PRO will take care of it for you when you select a digital mode.
4) have less potential for problems with overdriving and RFI because of the higher level audio input at the ACC1 connector.

I just dusted off (quite literally) an old TI c26 DSK. Has anyone used this as the core of a psk31 modem/processor ? Were I a smarter boy, I would tackle it myself (pse don't make me do this as it would likely make my head hurt - hi).

Every Linux kernel has it's built-in ax.25 kernel support,
That means kernel 2.4.x has the latest one.

The only probem is to get the kernel to compile... specially RH 7...

YO2LOJ - Marius.

BTW, those who claim you can not do high speed packet with Linux probably
never touched the Linux kernel, that's why they need a dos box :-o

If you are working with embedded and/or realtime systems, I do not understand why you would touch C++ even with a long stick :-), thus discussion of C++ compiler quality is quite useless.

If you use it after all, you better read through each element in the class hierarchy to check that it does not do anything stupid in the embedded/realtime context.

Some examples to watch up for:

Many classes use dynamic memory in a quite liberal way, which can easily fragment the dynamic memory. Do you really know in which condition the dynamic memory is after a few years of running. At some time, the requested contiguous memory segment is not available and the "new" throws an exception. How do you test for such situations ? Yes, you could delay the release of a product for a few years so you can stress the system for a few years before delivery :-).

In some cases the data bases in dynamic memory can be compacted, but this usually requires that large structures are locked against concurrent access and there are critical timing constraints how long other tasks can be blocked.

Many list and tree classes are written by programmers that did not think about concurrent access from multiple tasks simultaneously. Some other task may end up referencing a null pointer or end up in a self referencing infinite pointer loop while the structure is being updated by an other task. Often these kinds of problems could have been avoided by reordering some list update instructions and use of volatile qualifiers to force the compiler to generate instructions in the order specified.

If some locking mechanisms are used, either too large areas are often locked or some heavy (say 100 us) locking directive is used when 100000 accesses are needed each second :-).

There are a large number of things to check and usually quite a few modifications are required to existing classes and all these changes must be requalified, so I really do not see the point of using C++ and existing class libraries for realtime and/or embedded systems.

OK, if you have large system with multiple protected address spaces with strict quotas how much resources (such as dynamic memory) a specific process may allocate, sure you could write some non-critical processes, such as the user interface, with C++, if you can restart only that process without harming any critical processes in case of memory leaks or per process dynamic memory fragmentation problems occur.

The new embedded language is Java, and is taking the industry by storm.

C++ is the language of choice in real-time systems right now. Having switched from Jovial and Ada, as a lot of time was spent creating low-level objects that can be used all the way up to the CRT displays in a typical bomber.

Linux is a "junior, kiddie grade" version of UNIX, most popular with
Internet professioinal wannabees.

Perhaps that explains the disparity.

Have I mentioned lately that you are a moron?

First you claim that ANSI C is not a subset of C++, then two paragraphs
later, it's "Duh. By definition, of course they do".

Just in case I haven't mentioned it lately, you really ARE a moron. It
appears that you can't go much more than a few paragraphs without
contradicting (Duh!) yourself.

Have you considered running for election for the BoD at TAPR? You have the
necessary qualifications.

Charles, N5PVL

I really think you ought to research what you say about Linux vs. Windows. I have been using both in the personal and professional environment for many, many years. To state that Linux is a "watered down" Unix is an miss-statement from the start. The Linux kernel (remember the KERNEL is the operating system, everything else is applications that rely on the kernel to function) is everything that any other Unix is.

If it were "watered down", why would IBM, HP, SUN, Dell, Compaq, etc be rushing to provide server systems running Linux? They wouldn't be doing it just because it is "trendy". There has to be a performance/cost rational behind their decisions.

"Internet professional wannabes" are the only users of Linux. Then 70% of the Internet providers are "wannabes".
Infact, the movie making industry is embracing Linux big time. Dreamworks, Shrek, Antz, etc. are using Linux to do the computer animation, rendering, etc. Replacing expensive SGI IRIX systems.
Postal Service systems are switching from expensive licensed systems to Linux.

The embedded systems are mass migrating to Linux. Linux is available from a multitude of processors from Intel to StrongARM to powerPC.

The router/firewall I have here at home so more than one can access the Internet is a LRP/LEAF Linux system. It consists of a four slot passive ISA backplane, a 486 IS card (an Allison motherboard on an IS card), and an Ether net card. It does my routing, firewall and Ipmasqurading(NAT), all from a single floppy. Linux 2.2.16 kernel is the basis for this. Can you think of a single Windows release that can do this and fit on a single floppy? For around $100 of "obsolete" equipment, I have the equivalent of a several $1000 dollar Cisco router.

Is Linux for everyone? No. It still requires some computer/software knowledge to run properly. The reason Red Hat, Mandrake, etc survive is creating the installation/management tools to make installation and setup more "user friendly".

The only difference between professional/amateur software is that professionals are paid. Plus, professional software is market and time to market driven, resulting in the shipping of buggy software to make the "marketing forecast". A lot of pro's I have worked with weren't worth a damn. Just a job to them, no enthusiasm or work pride. Just a paycheck. The only reason they were there is because their high school guidance counselors told them that was where the jobs would be. In computer programming.

But, to call Linux "watered down" or to imply it inferior is totally wrong.

Excuse me. I did not make such a statement. You're confusing me with someone else.

In any event and although I haven't bothered to check for this, if ANSI C has even one construct or language definition that is NOT included in C++ then it cannot be a subset because C++ would not be a superset.

> Just in case I haven't mentioned it lately, you really ARE a moron. It

However, you have proven yourself to be a moron by confusing the parties with whom you are conversing. I cannot contradict myself using a statement I never made to begin with.

No good reason at all other than that of the limited sub-addressing space available to replace sockets if you want to run multiple services on the one machine.

Indeed for HF I think these or similar protocols over PACTOR[-II]/Clover are an excellent proposition.

regards
Terry

No limits on sub-addressing ... that is just a protocol issue at the
PACTOR/CLOVER level (what happens at connect time? Some command).

So who wants to play?

That's a real giggle!

Have you actually USED "... any other Unix ..."?

Linux is slowly slowly coming up to speed, but still has a ways
to go until the kernel has the features one really wants.

Not going to enumerate what is missing.
You can find out by reading the man pages for "... any other Unix ...".

Ok, I got the RH 7.1 kernel (2.4.2) to compile with the AX25 support enabled. And I'm collecting software that will let me test it out.

There are MARS networks in the USA that use TCP/IP over AX25. TCP/IP's routing flexibility makes it more manageable, and the only real application is store-and-forward email so the performance is fine. And if you restrict traffic to email then gateways to PACTOR become possible, which makes better sense over HF than AX25.

Here Jeff reveals his pathetic jealousy (common to Linux bots) and juvenile defiance of professional programmers, a group he obviously feels to be far removed from. It's not hard to see why he would feel that way.

Apparently the boy is either not clever enough, or not socially developed enough to make the grade. Hence his bitterness, and the resort to mindless recital of slogans and outright bull that Linux bots parrot to each other as a substitute for observation and thought. The alternative to those slogans and that bull would be objective reality, something Linux bots avoid at all costs, as it tends to put Linux in a bad light. I should be charitable though, and point out the fact that much of what Linux bots parrot does not come from a sinister impulse to decieve others, but instead from simple ignorance.

Linux is a learning tool, but not necessarily the optimum tool for all aspects of computer science. There are a range of applications that are easier to learn to do with Linux. This does not automatically mean that Linux is the best platform for all of those applications. It also does not mean that just because an application is written for Linux, that it will be as good or better than similar applications written for other OS. In most cases, in fact, the Linus stuff is way behind the Mac and Windows stuff. Some of the Linux applications are so crappy that people wonder why the Linux distributors bother to bundle it up. The reason they do is that the pickings are mighty sorry, and mighty slim.

Fact is, Linux is not second rate overall, it is closer to third or fourth. - But among internet professional wannabee's, cheap bastards, crackpots that envy Bill Gates beciuse he actually accomplished something, and naive college students, it rates high.

Professional programmers know better.

Charles, N5PVL

I've used other Unixes -- quite a bit in fact. I've used AT&T System V, SunOS/Solaris, and Digital Unix extensively, and others to a limited extent. Now I use Linux for pretty much everything -- haven't found anything missing in the current versions, and have no intention of going back to a closed OS.

I'll re-state what the last person said: what exactly do you think is missing?

```

It is not meant to be an example of good code (although it actually is a good way to see if code was compiled on Ansi C vs some substandard C) but a demo of the fact that Ansi C understands the //* language construct whereas C++ doesn't.

Rob

But that still leaves the question: Implementation bug, or a difference in the
BNF-parsed defintion of the two "flavors" of the language? It looks to me as
possibly a difference in the order (right-to-left or left-to-right) of parsing
the literals into tokens (the "//" vs. "/*" comment operators) by the
pre-parser/macro expansion pass.

I have only seen the formal language definition of the original C language, not
the ANSI standardized version or that of C++, so I can't answer my own question
without seeing these.

I have a TH-D7A (not G modded) handheld that is giving me real trouble, maybe someone here could help me out.

It's failing to show up on APRS. Its transmissions are digipeated by other APRS stations, but it looks like something in the position string must not be right because it doesn't "paint" an icon. I've entered the position manually, but NG. I've also noticed that it doesn't seem to accept NMEA data from my Garmin GPS II... I know it's talking to the GPS because it does that double beep upon acquiring position . I've tried everything in the manual, including several full resets, but nothing

seems to work. It receives fine, all functions seem to work, but it
appears that it just isn't giving out with readable position info.

Please either email me or post here if you think you might know a
solution. Thanks in advance for any and all replies.

73,
Fred N2FOZ

Charles,

You really ought to read something before you make statements about it.
In the original post I stated "both in the personal and professional
environment". Just to set the record straight about the the "boy", I
have been a professional software engineer for over 20 years after
obtaining my B.S. in Computer Science. Working with systems from TI 990,
DEC PDP-11s and VAXs BEFORE the release of the IBM PC. OSs used include
DX-10, RSX-11M, Unix on the VAX, and PDOS just to name a few. My career
for the past fifteen years has been more in the embedded systems area.
You state "pro's you know", what about your own "professional
background"?

For Hank,

You stated Linux's lacking in several areas. Which areas?

Oh yea, just read where Amazon.com is going to Linux on standard PCs.
Siting stability and cost savings. They expect to cut IT sending by 20%
this year alone. Reference, Linux Magazine Aug 2001 page 8.

And here we see an interesting phenomenon of an insult coming full circle.

A few years ago (say, 10-15 years ago), we "professional programmers" used to occassionally make fun of the people working on their toy systems, with their toy operating systems, and toy development tools. Now the toys (windows and PCs) have grown up a bit, and the toy-programmers are starting to insult the professional programmers in the same way.

Now I will say this (should make Charles happy): after some of these discussions, I have gone back and looked at the latest version of Visual C++ and must say that it surprised me that it incorporated so many good features. Older versions were definitely *not* this good (and easily fell into the category of "toy development tools" that I mentioned above). So Windows is definitely starting to get some good development software out there.

Now to add one last dig in here, I just thought I'd point out that the good features that MS added to Visual Studio seem in large part to be things taken out of the tools we Unix-heads have been using for a while. Real evidence of this under "Advanced Tools" are tools called "tabify" and "untabify" -- not real English words, but coincidentally exactly the name of the functions in emacs. Now I wonder where the MS people might have gotten the idea for this from? :-)

So congratulations on catching up. You're finally getting up to the level of the development tools that we've had for 15-20 years (that I was using under SunOS at least as early as 1985, and under Linux since 1992).

Like I said, read the man pages for (e.g.) HP-UX and Solaris.

Linux is slowly picking up all the bits one would like in a kernel,
but it ain't there yet. The fact that a subset of the applications
one would run on *nix can run on Linux is nice, but there are
still many applications that cannot (yet) be ported.

If you want a pissing contest, I win: 40 years of experience with many
flavors of hardware (from mainframes to micros), a dozen or two
operating systems, and dozens of languages. Since you won't trust
anything I might say about the various unices, I suggested you read
the man pages yourself.

Linux is an excellent *nix. So are several others.

What is your suggestion for an improved layer 1-4 protocol for ham radio?

Are you seeing the flashing "pos" display while the gps is connected - if
not, then your gps data is working on? (press the "pos" button). I assume
you have verified the lat/long is correct. I have found that things like
www.findu.com often take hours to show my station, some days it just does
not get there at all. But I do get "My Position" or "My Packet" on beacon
xmits, so I know I'm making the repeater.

You mean the AX.25 support in HP-UX and Solaris is so much better
than it is in Linux?  I'd like to see that...  are those man pages
online somewhere?

Rob

In article <9ij78d064f@enews3.newsguy.com>,
n5pvl@the-i.net ("Charles Brabham") wrote:

> Fact is, Linux is not second rate overall, it is closer to third or fourth. - But among internet professional wannabee's, cheap bastards, crackpots that envy Bill Gates beciuse he actually accomplished something, and naive college students, it rates high.

'third or fourth' still rates pretty high in my book, higher still is a radio amateur who constructs his own kit rather than one who just uses 'black boxes'. Maybe there is a parallel to be drawn in the computing world ?

I can quite appreciate why a radio amateur would not want to use a 'kit form' operating system, preferring instead a shiny 'black box' style OS with lots of bells and whistles, but that is no good reason to dismiss those who pull together and make their own software in their own time any more than those who do likewise with hardware in amateur radio.

> Professional programmers know better.

There are good and bad professional programmers, there are good and bad amateur programmers. There are good and bad radio professionals, there are good and bad radio amateurs.

73, Gareth.

Hank,

The comments about my professional background where aimed at Charles,
who seems to put great stock in professionals, quoting what "they"
think. But, never have I seen him site his professional background in

the world of computer science, programming, or computer/software engineering.

My question to you was to expand on your statement of Linux lacking what other Unix's (Unicies?) have. In this I am interested. You learn and make decisions by looking at both sides technically and rationally. I never said anything about "not trusting" you. If a salesman were to tell you that one car was superior to another because "it has more features", wouldn't you want to know what those features were before buying? Also, isn't saying "just read the Unix man pages" like telling somebody to read the Encyclopedia Britannica with out a set subject to look for? :-)

Is Linux the great do-all for-all that some Linux zealots preach. Of course not. But, then neither is any MS Windows product, Sun OS, Mac OS or any other. That is why your resume and mine contain so many different OSs and laguages. Different problems have different solutions. There is no one all great OS or language.

If you cosider the kernel is lacking in certain areas, and take the notion to, you can fix those deficiencies. You have everything you need. You are not reliant on some other enity to decide it's important enough to add.

Is Linux for everybody? A hearty absolutely no on that. I have been using Linux since around 1994 and every time I upgrade the kernel or X the Linux powers that be throw a new monkey wrench in to break something I am used to, Just because it sounded nifty to do. Right now I am fighting a war with Xfree 4.1 for my Nvidia Geforce2 MX. But, that is my choice.

Will I tell people they are stupid and call them names because they use something other then what I do. No.

(Aside from OE expanding "//" to "f i l e : / / " ...)

'//' is tokenized to indicate that the rest of the line is a comment, and otherwise ignored by the compiler.

In the bad old days before real C++ compilers came along, NEC's compiler used the old standard C preprocessor. In standard C, the division of labor is such that the preprocessor eats the comments before passing the stream to the first stage compiler. The preprocessor knew nothing about '//' comments, since this was outside its pervue. What problems do you think this might introduce?

```
#define FOO 127    // a thoughtful comment

  int i = 0;
  while (i < FOO) {
    ...
  }
```

It took more than a little sleuthing to find the cause of the compiler error. It indicated some problem with the closing brace, IIRC. If you happen to spot the problem, don't pat yourself on the back too hard. I pointed your attention to it with the leadup.

Mike.

Oooh, the memories this dredges up...

In the months leading up to the public release of NT 3.1, I had many long heated discussions with windows-phobes on how NT really was an operating system despite not being UNIX. One common thread was the laundry list of features that all OS's must support, but NT does not. It went on daily. The discussions usually took the form of: "UNIX is a real OS; UNIX has feature A, NT doesn't. Therefore, NT isn't an OS. Ipso facto." The only conclusion one could draw is that NT isn't UNIX (and therefore isn't a real OS being the presumed corollary). In fact, anything that wasn't UNIX wasn't an OS. I had the most fun when the less enlightened touted some shell function as a UNIX trademark. Unix bashing and baiting became one of my favorite lunch-time hobbies for a short period.
